Closing Thoughts

Simple Background:

1.1 billion people live on less than \$1/day

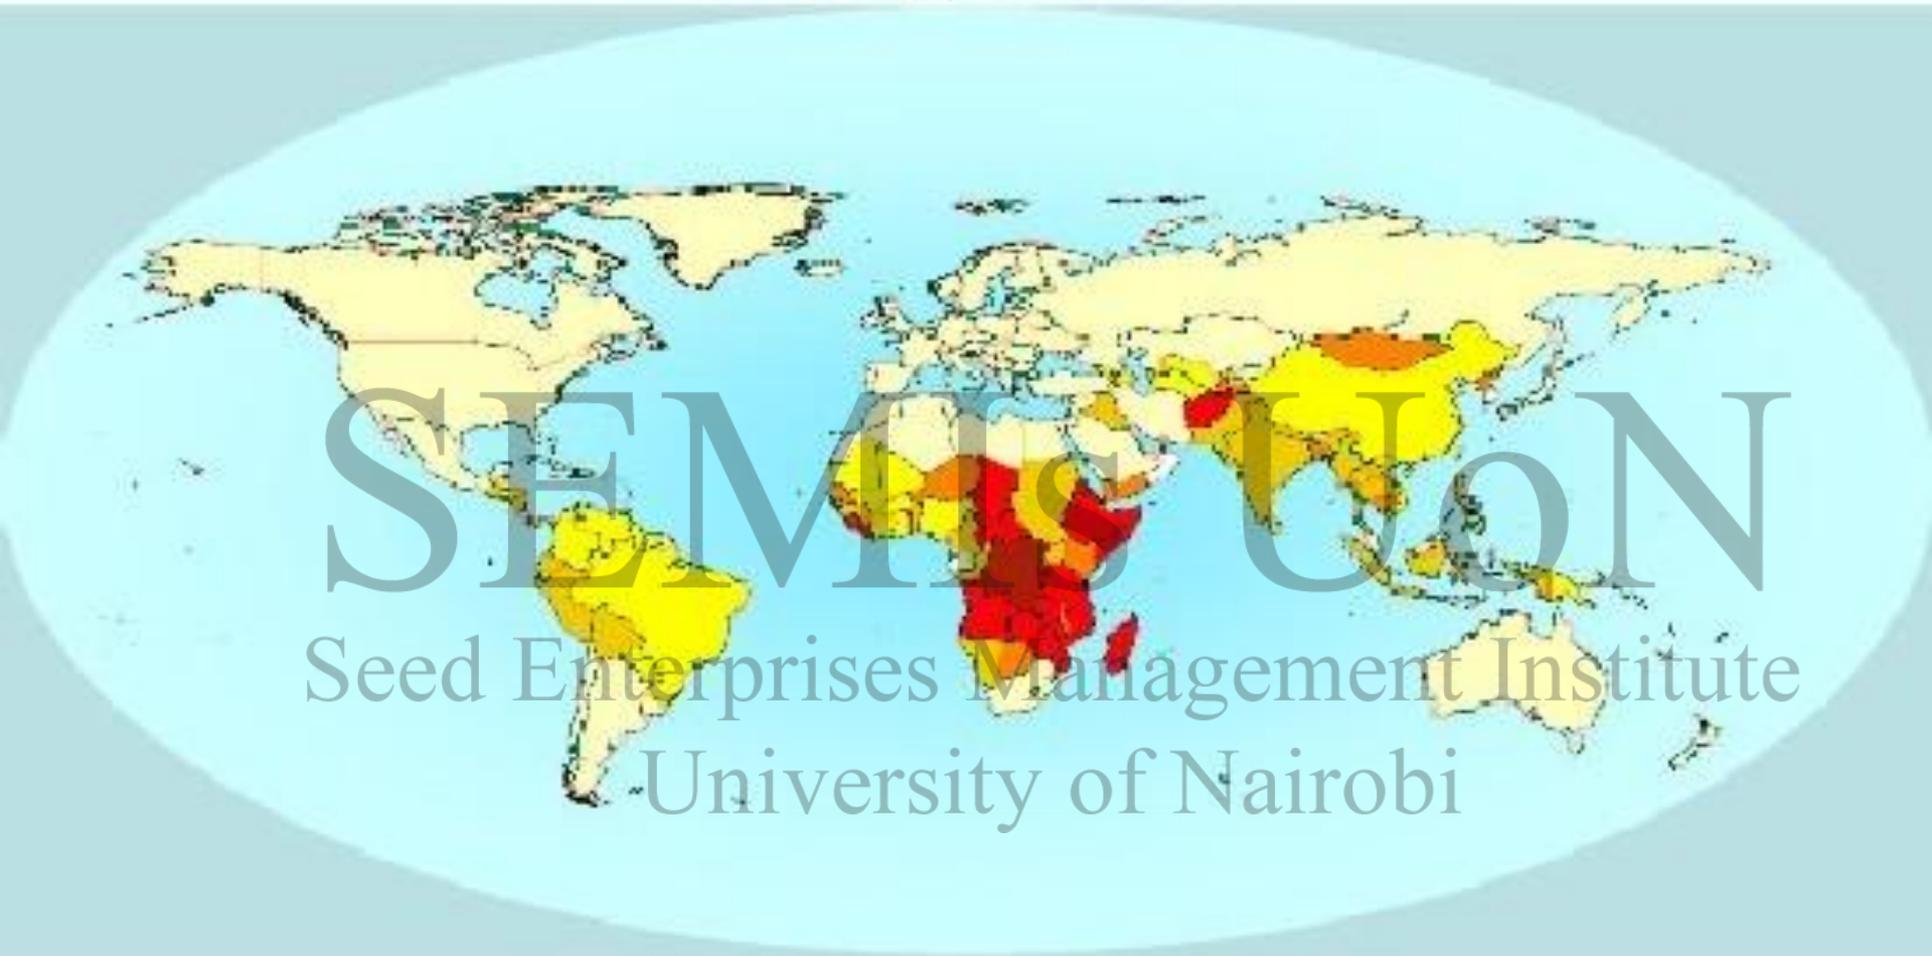

Over 800 million people (and rising) go to bed hungry each day

75% of these people live in rural areas

Sober Reminder: The Context

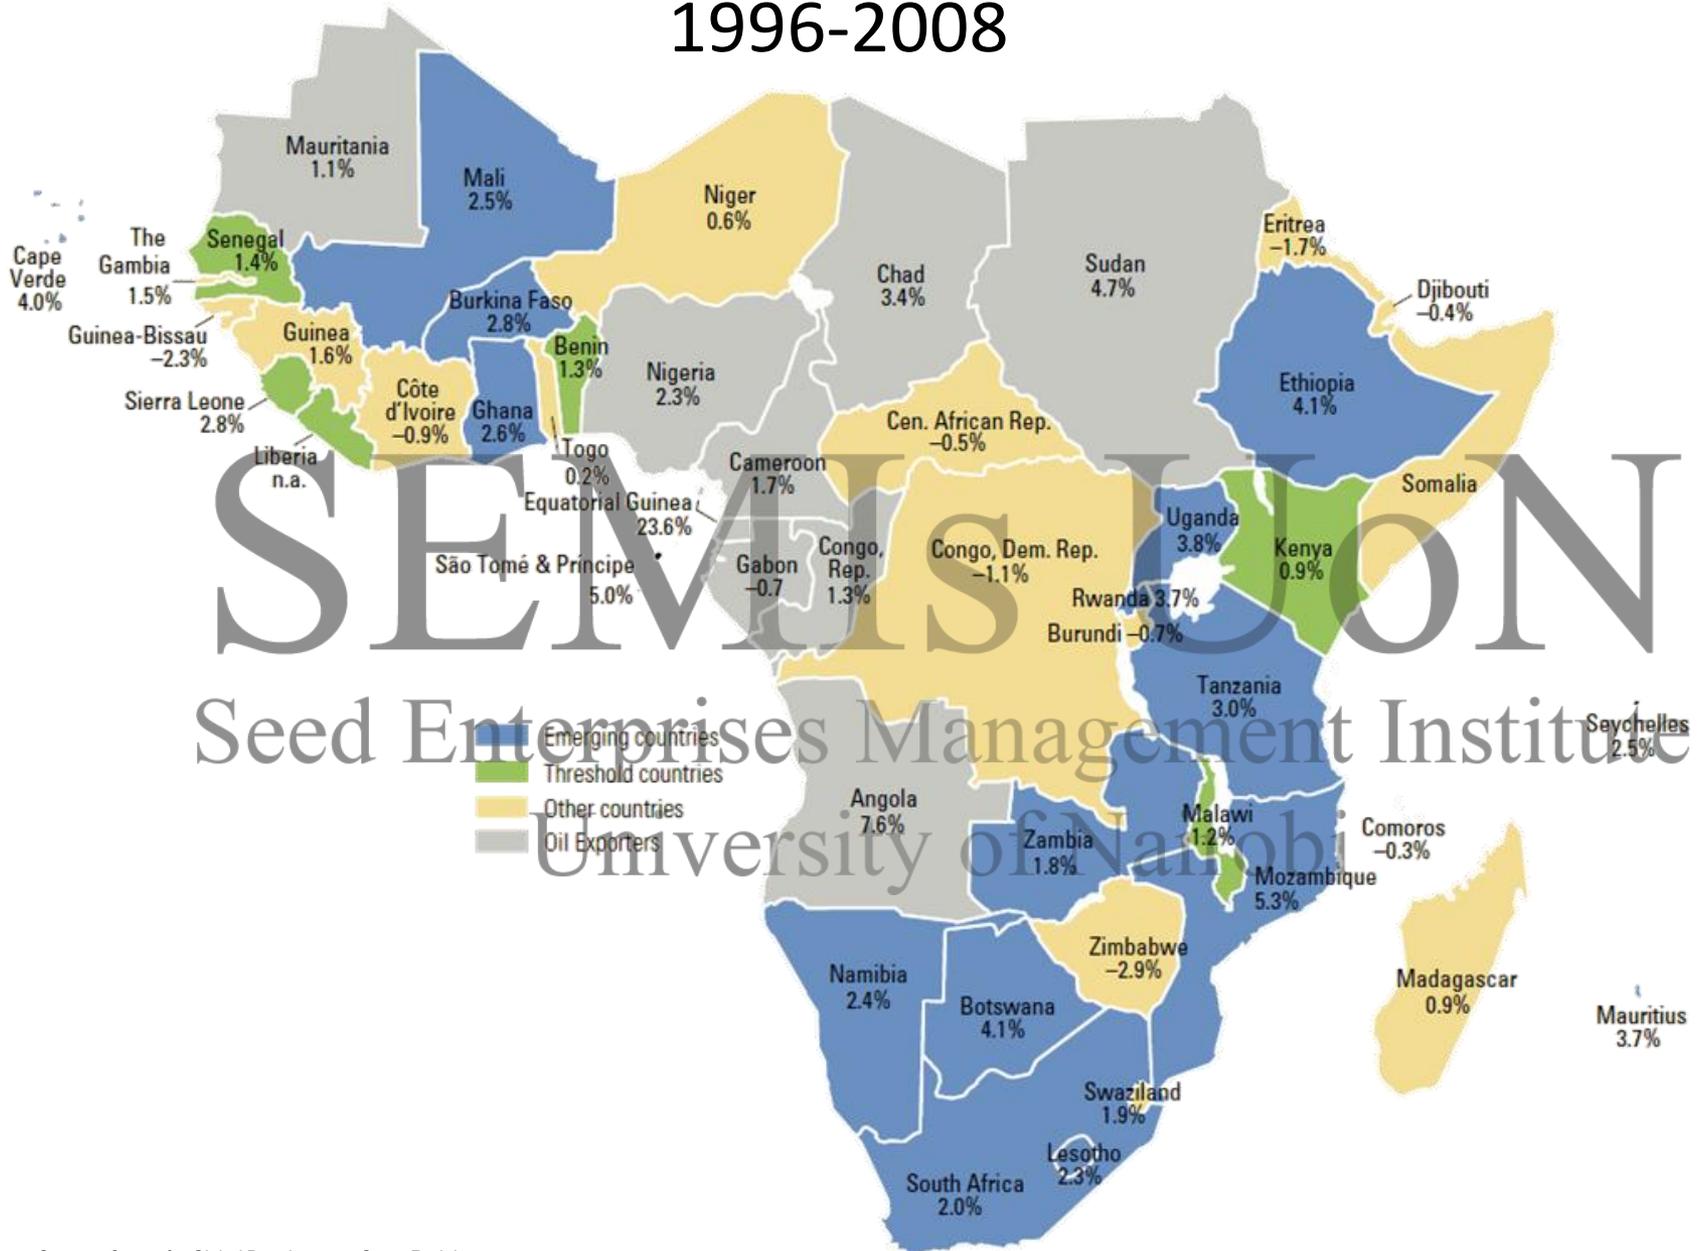

- “In 2009, the continent imported one third of its grain
- More than 40 percent of Africans did not even have the ability to daily obtain sufficient food.
- For the African farmer, conventional fertilizers cost two to six times more than the world market price.
- There has been a 23 percent decrease in food production per capita in the last 25 years.
- Since 2004, over 2.4 million hectares has been leased to both African and non-African investors to produce bio-fuel and crops for export.
- African Agricultural ministers have pointed to a possible loss of 20 percent of Africa’s future primary productivity as a result of land degradation and deforestation.
- Shockingly, Africa is the only continent where food aid outstrips external financing for agriculture.”

Improved Corn Seed Use:

Country	Estimated use of <i>improved</i> maize seed
Ghana	11%
Mali	3%
Ethiopia	19%
Tanzania	18%
Benin	0%
Mozambique	11%

PASS MTR Survey

Background and purpose of the surveys

“Surveys of farmers were undertaken in 14 areas of seven countries [Tanzania, Kenya, Uganda, Malawi, Ghana, Nigeria and Mali](#). The areas selected were those *where PASS supported agro-dealers or seed companies are operating*.

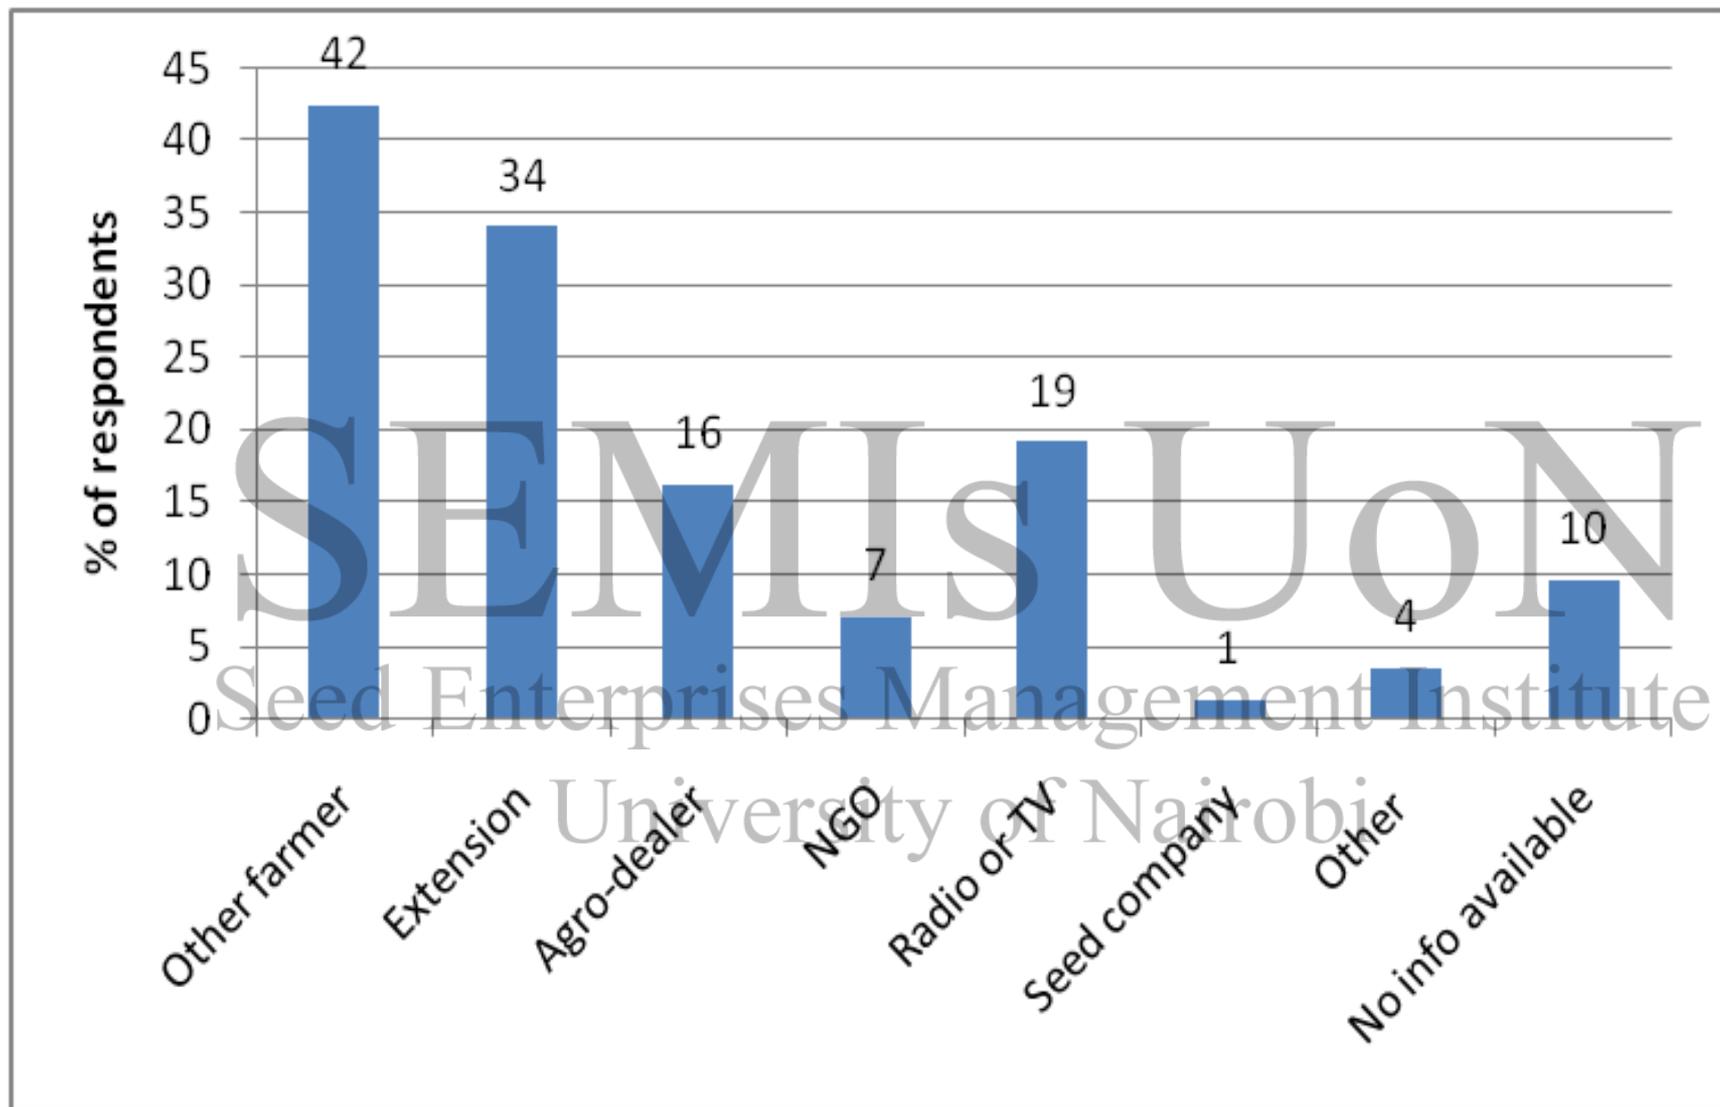

Of the [1542 respondents](#), 57% were male and 43% female, with most falling in the 26-35 and 36-45 year age groups and most (86%) being married. 28% of respondents had no formal education this being primarily older or female respondents.”

Improved and Local Varieties of the Main Crops

Source of Information on New Varieties

Source: PASS MTR, 2010

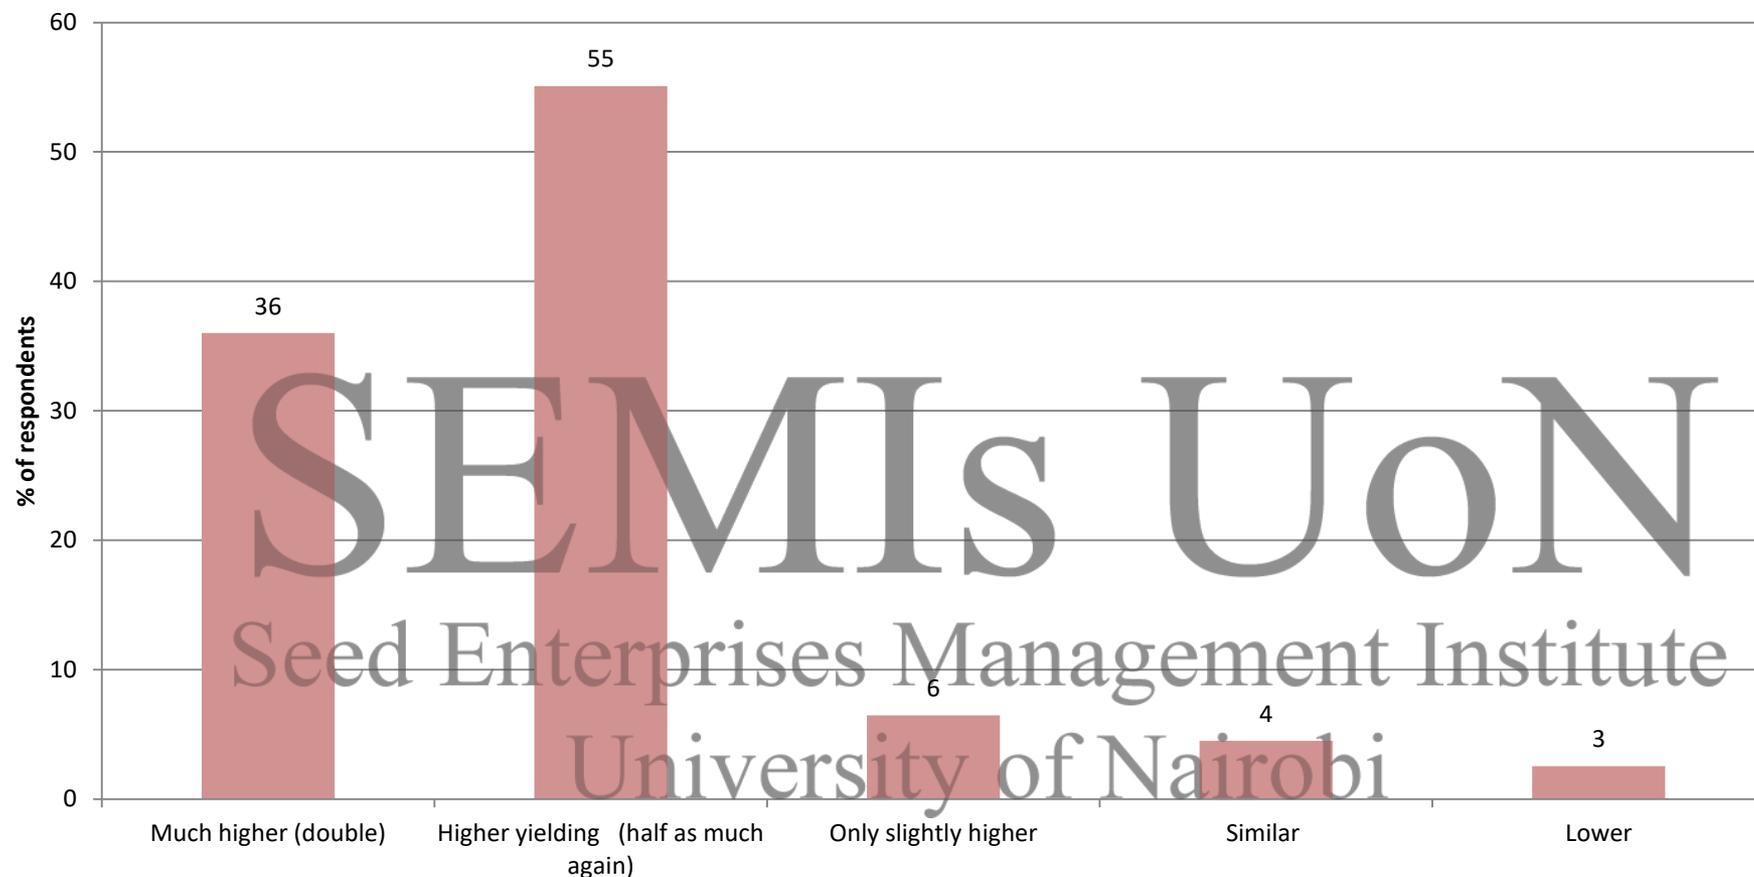

Time since farmers have introduced a new variety

72% of respondents have introduced a new variety to their farm in the last four years, with 30% planting a new variety in the past year.

Source: PASS MTR, 2010

Yield Perceptions of Those Growing New Varieties

“Of those already growing the new varieties, 91% indicated that the yields they had achieved were higher than that of local varieties and that they would definitely or be likely to continue to grow improved varieties.
