EDUCATION.

In Colonies containing a large number of Schools, it will be sufficient, if no detailed Return of them already exists, to state full particulars of those only which are Government institutions, giving the total statistics of the others.

The particulars for each School should show whether it is Denominational, and whether fees are charged.

The numbers of Scholars should be given, both from the total number on the roll, and from the average attendance during the year.

The totals should indicate the aggregate number of children receiving instruction in the Colony.

Some particulars of the subjects taught in the Higher Schools should be given under the head of Remarks.

Improvements in Agriculture introduced during the year 1912-13.

CATTLE:—

In spite of the prevalence of Rinderpest during the past year the number of cattle both native and grade has largely increased, and the opening up of the Northern Frontier District has resulted in the introduction to the settled districts of a large quantity of good class native cattle.

SHEEP:—

The success attending this industry still continues. The wool obtained from the up-grading of the native with the woolled sheep has shown a steady improvement in weight and quality.

HORSES:—

The importation of a good type of animal has increased, and the quality of locally bred animals has proved very encouraging.

PIGS:—

Pigs continue to thrive but the present supply does not warrant the establishment of an export trade.

OSTRICHES:—

The quality of feather has, on the whole, been all that could be desired, and points to ultimate success in this industry which has steadily increased.

CEREALS:—

Owing to the considerable increase in the area of skilled cultivation, the exports of grain have risen accordingly.

Sisal:—

This cultivation is receiving considerable attention, mainly owing to the good reports received on decorticated fibre from the Protectorate.

WATTLE:—

In the suitable districts planting has considerably increased and settlers have continued to concentrate attention on this industry.

DRESSING:—

At present the local demand is in excess of the general supply but this branch of farming is making most satisfactory headway.

LINSEED:—

Encouraging crops of Linseed have been grown during the past year and the promises of a successful flax industry are decidedly favourable.

FRUIT:—

Settlers are awaking to the importance of fruit culture, citrus fruits showing great promise and an experimental shipment of this class of fruit is being sent to London for disposal.

WHEAT:—

It has been found that the green fly, which did so much damage to the wheat crop last year, has become largely parasitised and this year the insect has had very little deleterious effect on the crop, and in consequence of this, and of favourable climatic conditions, the harvest has been a satisfactory one.

MAIZE:—

There has been a large increase in the export of Maize, but owing to the want of care on the part of certain shippers, consignments of inferior quality have been shipped with the result that the prices obtained for the crop as a whole have fallen somewhat. It is hoped, however, with the extension of the Kilindini Docks that facilities will be obtained for grading future consignments.

BEANS AND PEAS:—

As with Maize, the value of export has steadily increased.

COFFEE:—

Owing to the high and profitable prices obtained for British East Africa Coffee on the London Market, a further large area has this year been placed under this crop. In fact, Coffee growing is now becoming one of our future branches of farming. Coffee Leaf Disease made its appearance in certain plantations but it is not anticipated with the favourable climatic and soil conditions obtaining that this will have any serious effect on the yield.

COTTON:—

Extended areas in Jubaland, Tanaland, and the Nyunza Province were under this crop and the export was considerably in excess of that of the previous year. The natives of the Nyunza Province are now giving more attention to it than hitherto and it is anticipated that increased export will result next year.

RUBBER:—

A number of plantations are now in the tapping stage. Consignments of Ceara have been exported and the prices realised have been satisfactory. The industry has not, however, reached that stage to show whether it will prove to be a more profitable one to pursue than other crops and other plants such as Sisal and Cocoanuts.
