THE E.A. STANDARD, LTD.

DRIVING FOR SAFETY.

Simple Rules which should be observed.

SENSE AND SIGNALS

A safe driver is not necessarily a slow driver, because, by reason of careful observation, the value of his signals is usually as high as that of a fast driver. The receiver and outside driver. Careful drivers do not necessarily drive slowly. It is the instrument should be used with discretion, in such cases as to stop or proceed, and not to stop and start when other motorists are about having the desired effect of starting a race.

ACCUMULATION

It is generally well known that the general offer to drive than can be made by a single change of gear. It is a good idea to have a lower gear and a rapid accelerator when conditions make a sudden stop impossible. Such a condition does not arise very often, but it is worth bearing in mind.

EVERYDAY VIRTUES

The everyday factors of taking a corner too fast, turning off to the right without signaling, oversteering on a corner and falling on the wrong side should be sufficiently obvious to most drivers. A little training of the senses will be of considerable assistance in driving for safety, because when a difficult condition arises, by quick observation, he anticipated and the vehicle is ready to handle it.

To handle a car in a crowded thoroughfare requires constant attention to the surrounding conditions. In general, while traffic is dense, the car should be driven as near the centre of the road as is practicable. In the case of anticipated pedestrians who step out of the pavement or vehicles which appear unexpectedly from side streets, may be avoided more easily than if the car is close to the edge.

When driving in a busy thoroughfare it is desired to turn to the right, the correct procedure is to signal to the driver behind the middle of the road, giving the hand to the right. It is equally well to signal ahead, so that those who are following you may be warned of the intention to turn.

proaching traffic stream which will permit the car to drive across. Before this maneuver is attempted, however, the driver should take care to extend the right arm horizontally as an indication of his intention to turn. This signal should not be given as a preliminary to driving up against the left-hand turn, or to the left-hand turn.

Driving in the country allows of a certain amount of relaxation on the part of the driver, but even here the hidden dangers are many. There is a rule which the driver should bear in mind, and that is, perhaps the most important, that of a long cut appearing suddenly. This is a danger which a man who is inattending along the road is liable to incur, and which is quite indifferent to the fact that they are, in all probability, scattered over the entire high way.

As a rule, when a long cut appears, the quickest way of getting past, paralled as it may seem, is to stop and wait until the road has passed the car. When over-taking, however, this procedure cannot, of course, be adopted. The only thing to be falling the presence of two or three drivers, it is a good idea to have a lower gear and a rapid accelerator when conditions make a sudden stop impossible.

DRIVING FOR SAFETY.

Simple Rules which should be observed.

A safe driver is not necessarily a wise driver because...

It is not without reason that the driver who appreciates the value of safety...

The everyday facts of taking a motor car while driving in the right without spilling oversteering...

To handle a car in a crowded town requires constant attention to the surrounding conditions...

When driving in a busy thoroughfare it is desired to turn to the right, the correct procedure is to bring the car to a stop...

approaching traffic streams which will hinder the car to drive across. Follow this manœuvre as it is suggested, however, the driver should take care to extend his right arm horizontally as an indication that he is about to turn...

As a rule when a load of material is piled on the car, it is not the quickest way of getting paid, practical as it may seem, to stop and wait until the load has passed the car.

On NARROW ROADS There is one point which must be worthy of mention; if the car is approaching a double of traffic along which there is room only for one car to proceed at a time...

At the risk of appearing to be over-enthusiastic, we would suggest, most especially for novice drivers, that they should equip their cars with a motor cycle horn...

It is well known that the car which is the most reliable in general is the one which is the most reliable in detail. The driver of the smaller type of motor car should be especially careful in this respect...

OLDSMOBILE-SIX

Special Sports Touring

The reduced Oldsmobile special touring model is a car that attracts favourable attention wherever it is seen.

Steel disc wheels and nickel plated bumpers front and rear give it a smartness of appearance seldom found in cars of even greatly higher cost.

Windscreen wings add to the driving comfort, and in the rear is placed a trunk for carrying luggage or the necessary equipment of those who like to spend their holidays in the open country.

The color is beige, made especially attractive by reason of the Duco finish. Distinctive beauty is the only term that will describe this Oldsmobile.

Its price is £312—only slightly more than the price of the Standard Touring Model.

Standard Touring

Many people have wondered how a car as good as Oldsmobile can be purchased for so little money.

The reason is found in the idea on which Oldsmobile is founded—the desire to produce a Six to equal other Sixes in performance and appearance and yet to sell low enough to be within the reach of everyone.

Only General Motors Corporation could have carried out this ideal... With its vast resources, its enormous purchasing power and its staff of skilled engineers it was able, in conjunction with Olds Motor Works, to build the Oldsmobile and to offer it at a price below that of any other Six.

A General Motors product, Oldsmobile has behind it the stability and permanence that only such a vast corporation can give. Built into it are the results of years of research, and the best of materials are used in its construction.
