The Official Unofficial Newspaper Published in Kenya and Uganda.

Official Organ of the Royal E.A. Automobile Association, Horticultural Society of Kenya, Etc.

No. 1938. **NAIROBI, SATURDAY, NOVEMBER 21, 1925.** Published for the Proprietor by the Editor at No. 10, Market Street, Nairobi.

Fordson The Farmer's Most Reliable Hired Man

"To put the farmer on a par with the city manufacturer. To put his produce factory—*for that is what a farm is—on an efficient production basis.*"

Spurred by this ideal Henry Ford brought the Fordson Tractor into being.

Ten years have elapsed since the introduction of the Fordson. Built primarily for the farmer, the greater part of the 400,000 Fordsons that have been produced are a big factor in making thousands of farms more productive—and with greater returns to their owners. *Farm Profits do not come from greater and better crops alone, but depend much upon*

time and labour and the results of diversified farm activity. Fordson methods are directly responsible for the profits that result.

Realize the aid of the Fordson now for greater farm profits. Ask your neighbours who own Fordsons and give us a chance to show you how Fordson Farming will be more profitable to you.

The Sure Cure for Malaria.

Quinine alone is not sufficient to cure malaria. It simply arrests the malarial fever. To cure malaria it is necessary to combine other substances with quinine, that have the power of destroying the germs which invade the blood. The most important are the alcohol and permanganate the digestive function, therefore the remedy must be a tonic which will strengthen the system. The first remedy of this kind was first prepared and tested for the last ten years and saved the lives of many malaria victims in KENYA, TANZANIA & UGANDA.

Christmas Fare AT DUNCAN'S

DISTRICT NOTES.

From Our Own Correspondent. Heavy rain has fallen in Nairobi during the last week. A shower of some violence took place on Monday evening, which was followed by a large quantity of rain falling on Tuesday. The rain on Tuesday effected two and a half inches, whilst on a few places over three inches was recorded. It mostly fell between the hours of 2 p.m. and 5 p.m. and was welcomed by every one. The continued lack of rain, however, has been practically no rain on Friday or Saturday, but heavy showers on Sunday have heralded the approach of a downpour in the evening. It is now, therefore, but chiefly in the adjacent Native Reserves, where there are three or four showers in the night still. However, the morning sun has been in full force, and so the soil is becoming more obtainable at a cheaper price than in the past. Very little is produced and sold locally. It is generally a lack of a peculiar soil, which is not so rich as the soil in the river, in conjunction with the high temperature of the day. Messrs. Barnes and Edall, who are well known in the district, are well known to those who know them. The soil is not so rich as the soil in the river, in conjunction with the high temperature of the day. Messrs. Barnes and Edall, who are well known in the district, are well known to those who know them.

Duncan, the winner of the First Prize of £100 in a recent Baby Competition in which there were over 52,000 entries, was reared on the

Allenburys'

Progressive System of Infant Feeding

Made with scientific care, the foods are specially adapted to baby's needs and powers of digestion. They are not an experiment; 16 months have proved every one of them in the last forty years. Today more than ever it is recognized by those who know from experience to be the healthiest food for infant feeding. The Allenburys foods are designed particularly for Infant Feeding and are manufactured by special processes which make them peculiarly suitable for the purpose.

THE COST OF LIVING

Indication of a Gradual Rise.

TREASURY FIGURES ANALYSED.

Publication of the cost of living in this Colony has kept for nine years in the Treasury. An examination of those figures shows that since April 1914, there has been a gradual increase in the cost of living. It is also probable that since 1914, the cost has at least doubled. The main reason recently have been in the rapid rise of many prices.

In a general review of the situation of the cost of living in this Colony, it is not necessary to go into details as to how the price of various commodities has risen. It is sufficient to say that the cost of living has risen in the last four years more than it has risen in the last four years of the last century. The main reason for this is that the cost of living has risen in the last four years more than it has risen in the last four years of the last century. The main reason for this is that the cost of living has risen in the last four years more than it has risen in the last four years of the last century.

At the end of 1919, the cost of living was 127 per cent above the cost of living in 1914. This was due to a number of factors, including the war, the rise in the price of raw materials, and the rise in the price of labor. The cost of living has risen in the last four years more than it has risen in the last four years of the last century. The main reason for this is that the cost of living has risen in the last four years more than it has risen in the last four years of the last century.

WEDNESDAY, NOV. 31, 1920.

A DISGRACEFUL RESIGNATION.

When the Hon. Mr. D. J. O'Connell resigned his position as Minister for Education, it was a disgraceful resignation. He had been in office for a long time, and had done a great deal of good. He had been a member of the Government for many years, and had been a member of the Executive Council. He had been a member of the Government for many years, and had been a member of the Executive Council. He had been a member of the Government for many years, and had been a member of the Executive Council.

Malarial Debility

The destructive work of the malarial parasite makes our blood thin and watery even when infection has killed the parasite, the poverty of blood remains.

The result is that the malarial patient suffers from nervous and mental symptoms of various kinds, including loss of energy, impairment of memory, depression of spirits, unrefreshing sleep, a sense of lassitude, and ever increasing weakness. These symptoms of rapid origin and slow progress, which strengthen the cells and nerves of the body, increase the quantity of red blood corpuscles in an amazingly short time. In one of the leading hospitals in London, the following results were obtained:

Case	Time of treatment	RESULTS.
I.	14 days	30,000 red corpuscles p. cmm.
II.	14 days	30,000 " "
III.	14 days	30,000 " "
IV.	14 days	30,000 " "
V.	14 days	30,000 " "
VI.	14 days	30,000 " "

By strengthening the nerve (a special action of Santalogen) the body is able to produce more red blood corpuscles and to get rid of the malarial parasite. All "merry" symptoms disappear. In a short time you will find Santalogen to be your friend.

Start taking Santalogen to-day.

A Remarkable Run. OVER 10000 CARS TURNED OUT IN EIGHT MONTHS.

Another remarkable run was made recently by Mr. James P. Pearson, the well-known Harland cream and driver of cars for hire, who during a straight-eight Hispano, according to the figures from the Motor-Club, he ran 171 hours running time. His major part of the time was for the car concerned four adults persons and a child ten days, together with seven other passengers which gives an average from the figures of 27 miles per hour. This speaks remarkably well for the Hispano car and in a small space for the expert driving of the driver. As additionally it is a marked recommendation for the "shell" brand, with which the Hispano is equipped, for anyone who is able to drive over the Porto-Fort Hill section of the road readily will admit the impossibility of attaining more than 20 m.p.h. without substantial leaking engine, particularly on a heavy car. Over the total distance covered in this journey of roughly 1000 miles, Mr. Pearson reports that the petrol consumption averaged 12 1/2 gallons, although the car was loaded on both inward and outward journeys. This is a most remarkable performance for an eight cylinder car.

The Essex Output.

Upwards of 100,000 Essex cars were manufactured for the year up to August, 1926, the first six months of the year. The number, according to one of the Hudson factories who also stated that this number was 12 per cent. more than the entire number of Essex built during 1925, says the Motor-Club. With production on a volume basis it seems likely that the output for 1926 will not only be more than that built for all of last year, despite the fact that 1924 was considered a remarkably successful year. Not only has the sale been increased in the United States but the demand is also being in Great Britain; the Continent and in a few other foreign lands. In Canada, the Essex demand has been almost twice as great as in this country. The unusual success of Essex cars, said a Hudson official, "is all the more remarkable because no new model was introduced, and because most of the cars built in Essex business have been ordered in the usual mode, at all per cent. of which Essex created and saved. Essex business has been conducted in the usual way, so as to be the best of both worlds."

Wair to Nyeri.

Mr. J. H. English, the well-known motor and transport agent who has the contract for transport in connection with the Tripoli Journey Commission, in Jabal-tair to Wair, made a record journey from that place to Nyeri last month. He left Wair at 10 o'clock in the morning and arrived in Nyeri at 11 A.M. the same evening, a distance of 300 miles, mostly over waterless roads. The trip was made in a German "Busk" car and Mr. English himself had no trouble on the journey. He is particularly pleased that it is a further proof that anyone taking a long journey and wishing to do so in comfort (donor), the "Busk" car is the one to depend on, as being most reliable.

THE BOHEMBA GOLDFIELD.

A Little Known Area in Tanganyika.

MEN AND CAPITAL REQUIRED.

(SPECIAL TO THE "EAST AFRICAN STANDARD," BY WILLIAM H. JONES, Editor of the "E.A.S.")

The following is the second of a series of signed articles contributed to the "Standard" by a mining engineer who is located in Johannesburg.

It is a great misfortune to East Africa as a whole, and especially to the gold fields, that the discovery of the Bohemba goldfield has been so long and so unprofitably delayed. The Bohemba goldfield is situated in the north-eastern part of the East African Highlands, and is one of the most important gold fields in the world. It is situated in the north-eastern part of the East African Highlands, and is one of the most important gold fields in the world. It is situated in the north-eastern part of the East African Highlands, and is one of the most important gold fields in the world.

FREE MILLING.

It is a very fortunate that practically all the gold in the free gold fields, that is, there is little or no charge for the milling of the gold. This is a very fortunate circumstance, and it is one of the reasons why the Bohemba goldfield is so important.

FREE MILLING.

It is a very fortunate that practically all the gold in the free gold fields, that is, there is little or no charge for the milling of the gold. This is a very fortunate circumstance, and it is one of the reasons why the Bohemba goldfield is so important.

TWO MINES.

At present, two mines are being run on the Bohemba, one of them being the Bohemba Goldfield, and the other being the Bohemba Goldfield. The Bohemba Goldfield is situated in the north-eastern part of the East African Highlands, and is one of the most important gold fields in the world.

A PROMISING FUTURE.

At least 100,000 tons of gold are estimated to be in the Bohemba Goldfield. This is a very large amount of gold, and it is one of the reasons why the Bohemba Goldfield is so important.

RAILWAY. SECTE AVENUE.

to progress and the applied path to progress and civilization is sooner followed where the material wealth of the State is vigorously developed.

Agricultural development is too slow a process to achieve this objective within a reasonable time.

BOHEMIA.

The Bohemian gold mining area covers a considerable stretch of country lying between the Spike Gulf and the meridian of Musoma, one of the middle lake ports. Its approximate area is 2,000 square miles in extent. It is best approached from the port of Musoma, in this direction, there is a motor road and it is possible to obtain a conveyance from the Indian town during the dry season. In the rainy season this is always convenient as there are stretches of soft country impossible for motor. A still more formidable impediment is the almost complete absence of even the most rudimentary road tracks, which can be reached from Musoma either by motor car or by dhow, the latter are not recommended except in case of emergency.

The gold occurs everywhere in a series of quartz lodes, lying in parallel with the basic formation of the whole area or crossing chiefly of the older types of rock formations. Intersections of this strata by dykes are of frequent occurrence. While the general course of the conformable rocks is with a varying angle always north, the dykes vary widely in their direction; sometimes they cross and at other times they run across the formations.

The lodes are everywhere conformable with the enclosing matrix; they are generally mostly vertical in dip and are found in a bedding of dark reddish-brown texture and of crystalline texture. In other cases the enclosing rock is schist both as regards the foot wall and the hanging wall. This latter rock strata is heavily disintegrated and pressure on a large scale. That appears to be the case of the orthoquartz schist, which is so connected with the gneiss. Some of the

two to twelve feet below the surface. A well defined marker of this is a rough hard surface full of small holes and having an appearance like burnt tuff. Everywhere there underlying this will be found lodes, and very often such lodes will be gold bearing.

TWO MINES.

All present, two mines are being run on this formation, one is that of Curry and Wood. The lode here is glossy quartz fairly hard and 24 inches. The gold is fairly regular distributed in the quartz and runs from 4 feet to an ounce and over. Water is accumulated by means of reservoirs since the rainfall is considerable. Wood is still available for power purposes as well as for mining.

An exactly similar proposition is made, an Indian from Musoma and others. A considerable amount of the claims and a small surface of the lodes has been crushed. The neither of the properties have the people concerned with the development, and the cutting is extremely primitive. Gold is being won from such property in spite of bad mining and poor dressing plant.

A PROMISING PROPERTY.
About 15 miles North East of these areas there is a very promising quartz property now being developed by Messrs. Currie and Hill. A lot of work was put in here by the former owners and the development has shown what may become the best prospect of being done, so far only prospecting is being done, there is no mill on the property.

slimes. Ultimately the mine will run as a 25 stamp mill and will doubtless be a good dead pay mine to the owner.

MEN AND CAPITAL.

It will be seen from what has been written that here is a field which ought to have a number of plants at work on it. The gold here, the wood and the water will be a vigorous mining community in Tanganyika. One must not dilate on the advantages which will accrue to the community from such an area of industrial and agricultural development. While one ought to encourage the influx of men of the right sort to help in the development. While one can only describe the district as healthy, it is only fair to suggest that it is not more unhealthy than a health place at the same altitude is 3,000 feet above sea level, there is no real objection to the area for an opening for men who have some mining knowledge to make a comfortable living and to be able to lay aside their gains as an inconsiderable sum to enable them to provide for the day when they will no longer feel equal to the work of the tropics.

The mines will be not for export, the lodes are too near for export. It is a small money field and there ought to be no such such pioneers to help in the development of the Territory.

With Lake Railway connecting the native railway from Musoma to Dar-es-Salaam (owing to the short distance access to the field will be easy and the transport of material very easy) such a considerable and particularly simple Gold field is in demand and the price does not change—these factors which should influence the man who, with means and a liking for the open life of the field, will here find a most substantial form of making his money and work with little risk himself.
