## Estimates 1900-7

1905

23 Dec

Last previous Paper.

17

1 + 5 = 6 2  
/ 35

To revised estimates with observations and  
a letter from the Treasurer raising various points.  
Solicits replies.

(Minuton.)

Mr. Read

Brad  
These Estimates do not differ  
materially from the previous ones  
on 44420 on which I have already  
commented at considerable length.  
You are going to deal with the  
Agricultural Committee  
First Dept., and I do not  
think I need add much.  
With regard to the police, we  
shall probably agree to the sum of  
the Chancery £1000 for the purchase  
of a small Police force for the  
Kensal District, and the  
shorter which provides for an  
allowance of 100 shillings ~~including~~  
with a guarantee.

Accepted for 12 of the public buildings  
built with our own money  
Transporting money.

I agree that the amount \$200  
M.P.S. Allow for the Public cannot be  
allowed in the case of inflammations

The inflammations as to the new  
bridge construction which I understand  
in my memorandum 44420 are now suspended  
having sent them to the Treasury

It is difficult to meet the arguments of  
the Comptroller in favor of suspending loans  
to officials instead of giving them at  
unengaged prices or on having the officers  
hire or subletting your-and-quali buildings  
He will see a fight with the Comptroller  
unless, but I cannot see that it  
would be just even if he added \$7500  
to the estimate for the further  
loans asked for Major George

McLennan and - being paid at the  
rate of 10% part on the unexpended sum  
he would not long expect the price  
of his and McLennan's buildings  
to add up to \$7500 in 1858. He  
can prove \$7500 (or \$4500)

Received  
3/20/12  
380

Plans of the Hospital for which 96  
\$6000 expended on the account  
are not paid, but not the greater part  
paid in cash off or paid  
in the case of the last  
so questionable it is. Much more  
is demanded in the way of checking  
them here, but it is useful to have  
them sent for there as it makes  
the last inspection useful. We  
shall have to wait this evening

The Treasurer of 4 to 12 of his  
memo. also for rulings on certain  
questions of interpretation of my com-  
munications of the Comptroller. This may  
yield another major. I will  
see you on Monday.

1199 23/

8 J.R.  
of 2

As to details, proceed  
as proposed.

As to the general question  
of the government building and  
what the great amount should  
be, see minutes on 3/20/12

EAST AFRICA PROTECTORATE

No. 660

PROTECTORATE

My Lord,

*Mr. J. A. J. Jackson*

In continuation of my despatch No. 659 of the 23rd

*4th Feb 1905*  
 ultimo, I have the honour to transmit herewith for Your  
 Lordship's favourable consideration the revised Revenue  
 and Expenditure Schedules for this Protectorate for the  
 financial year 1906-7 together with a letter from the  
 Treasurer raising various points to which I would  
 venture to solicit the favour of reply.

2. The figures, as Your Lordship will observe, show  
 a large increase on both sides of the account, which is  
 mainly due to a difference in the system of classification.  
 For purposes of comparison with previous years it will

therefore

H. H. Principal Secretary of State

for the Colonies,

Ministry of

Downing Street,

LONDON,

therefore be better to take the totals as they would have been if there had been no alteration, i.e.

Revenue	1905-6	163,000
	1906-7	202,562
Expenditure		103,160
		441,732
Deficit		240,560
		289,340
Grant-in-Aid		214,000
		176,847

I trust that the very substantial increase in Revenue and the large reduction in the Grant-in-Aid will be considered satisfactory and will be held to justify the expenditure for which I have the honour to request Your Lordship's sanction.

3. The Protectorate is undoubtedly progressing rapidly and will, it is hoped, return us a handsome profit on the money we lay out, and I am therefore of opinion that it would be false economy not to allow the services, on whose efficient working the prosperity and development of the country depend, the expansion so necessary to this arrangement.

4. Some temporary decrease in expenditure might no doubt be effected, but would necessarily react unfavourably on the trade and development of a growing

country, and the consequent shrinkage in the sources of revenue which are now expanding so satisfactorily would completely nullify any initial savings which might now be made.

F. The Department in particular, the Public Works, is intimately bound up with the future progress of the Protectorate and I hope that the expenditure in connection with it, which is admittedly heavy, will not be looked upon unfavourably, due regard being had to the fact that the sum which Parliament will be asked to vote as a grant-in-Aid is nearly thirty-eight thousand pounds less than in 1905-1906.

Our cuts reduction is no doubt partly, though not wholly, due to the existence of unexpended balances from the previous year's votes but the financial position is not thereby affected and it is surely better that less money should have been spent in the past on departments where it has apparently not so much needed than that these services, which fuller experience shows us so urgently require it, should be hampered in their work for lack

of funds.

It would be needless to say that the days of the financial over-charging of the Protectorate, to enter closely into matters of detail. This has been very fully and ably done by the Treasurer in his notes which accompany the printed estimates. There are however certain points which require some special elucidation and recommendation on my part and I propose to take them in the order in which they occur.

8. Secretariat - I feel that it is not necessary for me to reiterate the arguments advanced by my predecessors in favour of placing the salaries of this important department on a proper footing. I know the opinions formed by Mr Jackson and my two immediate predecessors regarding the value of the work done by Mr Morris and his Assistants, which I am now able to confirm by my own experience. This work is most important, arduous, and steadily increasing, and I have no hesitation in giving my unqualified support to the recommendations made in the estimates of the scale of salaries, which are probably now understood already met with your Lordship's approval.

approval.

9. The appointment of an Assistant Crown Advocate.

This is ~~now~~ <sup>now</sup> regarded as most urgently necessary. For some time past it has been evident (vide Sir D. Stewart's remarks in his despatch No. 559 of October 13th) that the work of the Crown Advocate's Department is too much for any man, however able, to undertake single-handed. Although both Mr. Combe and his predecessor Mr. Barth have done all that could be humanly expected of them it has not been possible entirely to avoid delays.

The Crown Advocate has to advise the Commissioner on all legal points arising in the conduct of the administration of the Protectorate; in itself a task sufficient to occupy almost the whole of his time, he has to appear for Government in cases where its interests are concerned, he has to draft all ordinances, rules and regulations, and finally he has to supervise the preparation of all leases and deeds. It is this last

part of his work which is responsible for such delays as have occurred and it is in connection with it that

I am specially anxious that an Assistant should be

appointed

appointed. It is very desirable that all transactions connected with the acquisition of land should be carried through as smoothly and expeditiously as possible. Any failure in this direction is very annoying, and indeed scarcely fair to the individual concerned, and generally results in regrettable recriminations levelled at the administration.

The Assistant Crown Advocate, should Your Lordship approve his appointment, would deal primarily with the documents regulating the purchase leasing or transfer of land, such square time as he might have at his disposal being devoted to assisting His Office in the other branches of the work of His Department.

The creation of this new post will obviate the necessity of employing Messrs. Head, Byron and Harrison as Crown Solicitors and a sum of three hundred pounds for their fees will be saved, so that the additional expenditure will not be large and for these reasons as well as for those given above, I venture to hope that Your Honour will right willingly give your approval.

10. Police.

The expenditure in connection with this Department shows an apparent increase of five thousand and five hundred pounds but one thousand pounds out of this is counterbalanced by Reimbursement which is now credited separately instead of being set off against expenses, as was formerly done.

The remaining four thousand and five hundred pounds represents increases of staff rendered necessary by the development of the country, the influx of white-settlers and the establishment of new posts in outlying districts, which require a staff of police for the maintenance of order and the protection of the stations against possible native attacks, as it is not always possible to utilize military forces for this latter purpose. Moreover of the one hundred and sixty additional constables asked for fifty-four replace a similar number of irregular police the employment of whom is being discontinued.

The increase in the numbers of the rank and file represents corresponding additions to the superior ranks. I am accordingly asking for three more Assistant District Superintendents of Police, two Inspectors and one Sergeant-

Instructor. The maintenance of the European establishment of the Department on an adequate footing is rendered the more desirable by the presence of a rapidly increasing white population, mainly from South Africa, where a strong and not unreasonable prejudice exists against the employment of native policemen except in the name of criminals of their own colour.

For a similar reason two European warders have been asked for to be employed in the Mombasa Jail, where a number of white misdemeanants and vagrants are from time to time confined.

11 Education Vote.

Mr. Jackson (vide his despatch No. 396 of September 26th) originally estimated for two thousand and five hundred pounds, in connection with this Department, but, as it seems probable that some time must elapse before the details can be arranged and the scheme itself take definite shape, we have decided that during the first year at any rate it will be sufficient to ask for five hundred pounds for preliminary expenses.

## Government Transport

The increase asked for in the staff of this Department is due to the development of the country generally, the opening of new stations and the heavy Public Works building programme, which have thrown a great deal of extra work and responsibility on the shoulders of the Director of Government Transport.

This officer ought to be able to leave Mombasa from time to time to inspect his up-country staff, but he is at present only able to do so at the risk of retarding the despatch of goods from Head-quarters. I have therefore inserted an Assistant Director of Government Transport and two additional clerks for the Mombasa office. With their assistance I have no doubt that the efficient discharge of the duties of the Department will be greatly facilitated.

12 The Military Schedule has been passed by the Inspector General and the various items thereof call for no comment on my part with the exception of the insertion of allowances of two hundred pounds per Mess Expenses. I know of no precedent for a

grant of this description, which appears to me somewhat anomalous, and I am inclined to think that it may have escaped General Manning's observation.

13. Postal and Telegraph Departments.

This is another instance of increases necessitated by the progress of the Protectorate. The business of these departments has grown very rapidly of late and in order to keep pace with requirements of the public two additional European clerks and telegraphists, a postmaster and an Inspector in Uganda are asked for. Nothing is more appreciated by the white population than an efficient postal service and nothing more severely criticized than its absence. The provision of a motor launch is justified on similar grounds, as owing to the elimination of the delay caused by the necessity of getting up steam it would enable mails to be conveyed to and from steamers much more rapidly than any steam-launch could carry them. There is I understand no difficulty in procuring petrol in Kampala. In view of the more inclined to recommend this additional expenditure as the revenue earned by the Department is rising steadily.

In the case of Telegraph construction I have to ask for several considerable sums in connection with alterations of the existing line which appear desirable

either as conducive to the convenience of the public  
and therefore likely to produce revenue or as necessary  
for the maintenance of our communications, on political  
grounds. In the latter category I should place the  
Mombasa-Kisumu extension and the diversion caused by  
the removal of Mombasa Station, and in the former the  
additional line from Kisumu to Juba (half of which is  
to be paid for by the Uganda Protectorate) and the  
Kiambu-Port Bell extension.

The two hundred pounds asked for in connection with  
telegraphic improvements in Nairobi will, I think prove  
to be money well spent for increased public and inter-  
-departmental convenience.

The diversion of the telegraph line between  
Mombasa and Lamu seems to me most essential if telegraphic  
communication between the two places is to be kept up  
at all. At present a swamp has grown up along a large  
portion of the route followed and the water is having  
a most deleterious effect on the poles many of which  
have already rotted through and will shortly have to be  
removed. It was originally thought that the trees  
would

could be diverted so as to avoid this swamp for six hundred pounds but further investigation has shown that it will be necessary to make a wider detour which will bring it much nearer to the coast and take it through Kipini and Kenumbi. This will cost one thousand and five hundred pounds but, though I regret the increase in the estimate, I think it will prove more economical in the long run to spend the money rather than endeavour to maintain the line in its present position where the necessity for repairs must constantly recur. It is certainly most important that communication should be kept up with Lamu, and thence by runner with Kisimayu, as otherwise intelligence of any disturbance in Mombasa might not reach Lamu for weeks; any absence there, by some evil chance or the line breaking down could be disastrous. It is to be recommended especially when it has the concurrent advantage of linking up Kipini, the probable future port and emporium for the trade of the Tana River with Mombasa and Lamu. This diversion is strongly supported by the Post Master General and Superintendent of Telegraphs who unhesitatingly endorsed my recommendations.

recommendations. A map showing the proposed route is  
enclosed.

14. As regards the Agricultural and Forestry Departments,  
I would venture to draw Your Lordship's attention to  
Mr. Jackson's despatch No. 636 of the 25th ultmo  
explaining that as no contrary instructions had been  
received the money necessary for the continuance of the  
Agricultural Experiments was being inserted in the  
Estimates. Your Lordship will perceive from that despatch  
that it is not proposed to disturb the status quo until  
Mr. Linton's period of service has expired.

15

Public Works.

This is a schedule which exhibits a considerable  
increase in expenditure and in view of the remarks made  
by the Lords of His Majesty's Treasury in commenting on  
last year's estimates some explanation is perhaps required  
for the insertion of so large a sum under this head.

Sir C. Elliot in his despatch No. 261 of April 21st  
1904 stated that he hoped to house all the officials of  
the ~~Government~~ satisfactorily by April 1905 for the sums  
inserted in the ~~estimates~~, provided that the staff was  
numerically

numerically the same. This has not been the case.

however. There has been an increase in almost every

Department and in consequence I find it impossible to

affect any reduction in our building programme. In fact

the contrary is the case.

In justification of this I can only plead as before

the growth and development of the country, the increase

of revenue and the steady diminution of the grant-in-aid.

Moreover our present scheme aims at housing all officials

in residences owned by Government whereas Sir C. Eliot's

merely hoped to accommodate them in buildings either owned

~~or rented by Government. The alternative is important as~~

I shall have occasion to explain later on.

It has been proved by experience that it is in the

and more economical to give officials good houses and

officer accommodation even though they may be actually

able to carry on their duties under the most inconvenient

and uncomfortable conditions. Their health, their

enthusiasm, and the quality of their work are bound to

suffer if they have to live and transact public business

in unsuitable and inadequate buildings, and I would even

so far as to say that valuable lives are lost to  
the administration in this way which might have been  
saved had a more generous and liberal policy been  
pursued. Our East African death-roll is I regret to  
say by no means a short one and in spite of our  
endeavours to keep pace with the requirements and  
recommendations of our medical advisers it is almost  
impossible to do so. What appears to be sufficient  
when the estimates are being prepared is found in the  
light of succeeding twelve months' experience to be  
quite inadequate. Moreover we have never really  
ventured to ask for the hole or the money which it  
would have been desirable to spend, as the necessity for  
the reduction of the Grant-in-aid has always weighed  
heavily upon us. This year, however, as our financial  
circumstances have considerably improved, I am  
endeavouring to frame the building programme in such a  
way as to meet a reasonable proportion of our more  
pressing needs, though there are still many items which  
have had to be omitted.

Perhaps at this point I may be permitted to c

remark

remain that the practice of renting quarters for a  
large number of officers, as we have to do at present,  
is a ruinously expensive one. The Government has to  
pay an annual rent anything from ten per cent to twenty  
five per cent on the original cost of the building and  
the accommodation provided is generally of the poorest  
and most insanitary description. It would really be  
far more economical to undertake the initial capital  
expenditure involved in building these houses ourselves  
rather than pay many times their value to Indian  
contractors. Even if Head-quarters should shortly  
be moved from Mombasa to Nairobi there would be no  
Government buildings which would not be fully required  
for those portions of the offices which would have  
to be retained in Mombasa.

Mr D. Stewart also originally intended to insert  
a sum of seven thousand and five hundred pounds in the  
estimates for the purchase of the houses at Nairobi  
and elsewhere at present rented from Messrs. Jeewanji  
(vide his despatch No. 496 of September 9th) but in view  
of the necessity for keeping down the Grant-in-Aid this  
item

112

item was subsequently struck out.

A. Taking in detail the more important features of the schedule, the suggested scheme for laying out the town of Nairobi in a systematic way involves the appointment of two surveyors for one year only. In view of its prospective importance I am of opinion that it would be regrettable if the town were allowed to grow up in a straggling and unsymmetrical manner, while the expenditure of a small sum at the present stage of its development may save us much difficulty in the future.

B. The provision of proper house and office accommodation for the Secretariat formed the subject of Mr. Jackson's despatch No. 682 of November 15th and I can only reiterate what he then said as to its importance. The work of the Department is at present carried on under very inconvenient conditions which I consider should be alleviated with the least possible delay.

C. Two thousand and one hundred pounds has been inserted for quarters for junior officers in Mombasa, who at present live in privately owned houses for which the Government has to pay an extravagant rent. As I have mentioned above

we cannot fail to gain by the abolition of this system,  
more particularly as the Principal Medical Officer  
strongly condemns these residences on sanitary grounds.

D The item of five hundred and fifty pounds for the  
Port Officer's house is due to the fact that his present  
residence interferes with the light-house and leading  
marks and has also been found to be damp and unhealthy.  
Moreover the Principal Medical Officer strongly  
recommends that all officials whose duties keep them  
permanently in Mombasa should live in two-storyed  
houses. The low cost of the new building is accounted  
for by the possibility of utilizing some of the old  
material.

E The Mortuary and post mortem room at Mombasa, for  
which two hundred and fifty pounds is asked, are urgently  
required in order that the medical staff may have proper  
facilities for investigating suspicious deaths and  
detecting and eradicating epidemic diseases before they  
have established too firm a hold upon the population.

F The Refuse Destructor costing six hundred and sixty  
pounds is another concession to the demands of the  
sanitary authorities. There is no doubt that it would  
be

be an important factor in promoting the health of the town.

G. The erection of a European Hospital at Nairobi was sanctioned in principle last year and a sum of one thousand pounds was inserted in the current estimates, pending the preparation of plans and specifications which would justify the allocation of a lump sum to complete the buildings. These plans are now ready and are approved by the Principal Medical Officer. I transmit them herewith and trust that Your Lordship will sanction the six thousand pounds required to carry them out.

H. An additional five hundred pounds is asked for the completion of Government House Nairobi. This excess is due to the heavy advance in the cost of imported tea, sugar and similar articles experienced in finding suitable grounds.

I. The experimental veterinary station at Nairobi is estimated to cost five hundred pounds including furniture, fittings and water-supply. In view of the importance of increasing our knowledge of the diseases

of cattle and horses in a country which seems to possess a future as a stock-raising district, I trust that this station, for which the Chief Veterinary Officer pressed very strongly, may be allowed.

J The Bacteriological Laboratory, for which seven hundred and fifty pounds is asked, would also be a very desirable addition, and the Principal Medical Officer is most anxious for it to be built. At present the Government Bacteriologist has no proper building in which to work and consequently a large amount of pathological material, from the investigation of which valuable results might be obtained, cannot be kept under the existing conditions.

K The Transport Store at Nairobi is required for warehousing material arriving by rail for out-stations. If this has to be left in the open air, as is the case at present, it is liable to risk of theft or of deterioration from exposure.

L The Director of Public Works strongly recommends the demolition of the present Michakos Station and the erection of new buildings at a cost one thousand and eight hundred pounds. It appears that hotel offices and houses are in

in a dilapidated and dangerous condition and are moreover infested with insects and vermin which no amount of cleaning and disinfesting will remove. Most of these buildings were erected in the time of the Imperial British East Africa Company and it is not surprising that they show signs of collapse, constructed as they are of flimsy and unsubstantial materials. It is not proposed to spend more than six hundred and fifty pounds during the year 1905-7, the remainder of the work being completed in the following year.

M. The continuation of the Sea Wall now being constructed at Kisumu is a project which I most strongly recommend to Your Lordship. A favourable consideration is that part of it which has already been built is reported to be an unqualified success and the number of mosquitoes in the town has considerably diminished with most beneficial results to the welfare of the residents.

Your Lordship is doubtless aware that Kisumu in the past one of our most unhealthy stations, many officers having been invalidated and one, Dr. Hann, having died there. In most cases malaria has been blackwater fever, which

is generally due to persistent malaria; I trust therefore that Your Lordship will approve of the continuation of the wall and will sanction the expenditure of two thousand pounds, including an unexpended balance of five hundred pounds from this year's vote, for its completion.

N. The Public Works store at the same place is needed for the preservation of valuable tools and building material from theft. Of the estimated cost of eight hundred pounds it is only proposed to spend three hundred and fifty pounds during the current year.

O. The erection of a new station in the Mundi District, due to have been commenced this year but owing to the imminence of hostile operations against the Mandi it was deemed inadvisable to select a site until peace was restored. Parrot gun therefore is asked to spend the seven hundred and seventy-five pounds allowed in this year's estimates as well as a further sum of two hundred pounds to complete the station.

P. The settlement of the Mandi question and the removal of certain sections of the tribe into a reserve will necessitate the establishment of an outpost, which is estimated to cost eight hundred pounds.

Q Sir Donald Stewart in his despatch No. 327 of June

*From  
22/8/23*  
recommended that a police post should be placed in the Sotik country in order to exercise a more effective control over the inhabitants and bring them into closer touch with the administration.

One hundred and twenty-five pounds has accordingly been inserted for this purpose.

R. The Director of Public Works is anxious to establish an office and yard at Naivasha for his department as he considers the building and road-making programme in that province is too extensive to be properly controlled by the Executive Engineers at Kiambu or Nairobi. The buildings will cost one thousand five hundred pounds, of which one thousand pounds would be spent in the year 1906-7.

S. The new jail at Naivasha is urgently required, the present structure, which is in a very dilapidated condition, having been condemned by three successive Medical Officers during the last two years.

T. The purchase by Government of the Town Hall at Nairobi for one thousand pounds and of some sanitary plant

1. The sum taken over by the Conservancy from the Uganda Railway for three hundred and thirty-four pounds is strongly urged by the Sub-Commissioner of Ukaruma on the ground that the Municipality is not allowed to receive the premiums for building stands and is with circumstances described in its powers of rate-collection and assessment.

Mr. Ainsworth says that the Municipality cannot possibly pay these sums itself and suggests that the purchase of the sanitary plant should merely be entered as a book transfer between the Railway and the Protectorate.

V. The sum of three hundred and thirty-five pounds for clearing the bush on Mombasa Island would enable a very useful and desirable piece of work to be carried through.

There is no doubt that the proximity of tick vegetation to European residences is favourable to the existence and propagation of mosquitoes and consequently to the dissemination of malarial fever.

V. The three hundred pounds asked for in connection with the Luwinga lime quarries is required for the construction of a platform and a shore road line to the shore of the lake. As so much building is going on in the Kisumu province larger quantities of lime will be

required, and it is also sent to Naivasha, Nairobi and even Fort Hall so that anything which will increase and expedite the supply is bound to be profitable to Government.

The Director of Public Works lays great stress on the provision of two motor lorries costing one thousand and three hundred pounds for his Department. He anticipates a vast increase in the rapidity with which heavy goods can be handled from the introduction of these lorries which have apparently been most successful in other parts of the world. I quite agree with Mr. Ross in deprecating the long and vexatious delays which arise from the employment of porters in transporting bulky materials and compel us to keep expensive artizans idle for days and sometimes for weeks together. It is therefore that these lorries, or the value and usefulness of which he is quite confident, may be sanctioned.

The sum of one thousand pounds for furniture for Government House, Nairobi would have been included in the present Estimates had not the Director of Public Works pointed out that it would not be finished before March 31st. It was therefore struck out and is now

reinserted.

16. In conclusion I can only express my regret that certain items, for which the Secretary of State's sanction should, properly speaking, have been obtained previous to their insertion in the estimates, remained unreported, possibly owing to Sir D. Stewart's death, and I trust that this omission may not prejudicially affect their favourable consideration at Your Lordship's hands.

I have the honour to be,

With the highest respect,

Very truly yours,

Your Lordship's most obedient,

Humble servant,

Duplicate.

C. O.

1943

P.M.

R. 18 JAN 1943

The Treasury,

Montana, 20th December 1905.

Corr. No. 116.

Sir,

I have the honour to transmit herewith 2 copies of the Estimates of the East Africa Protectorate for the year 1906-1907, reclassified in accordance with the "Instructions for the guidance of financial and accounting Officers of the Colonial Service".

I had hoped to be able to submit printed copies, but the resources of the Government Press have proved to be unequal to the occasion, and I have been obliged to submit the estimates only partially printed. The printing is being proceeded with and 4 complete copies will be duly submitted for transmission to the Colonial Office.

2. Explanations respecting extraordinary expenditure and differences between anticipated revenue and proposed expenditure for 1906-1907 and the enlarged estimate for 1905-1906 have, where convenient, been furnished in raters on each schedule, but in many cases special explanations in the covering despatch to the estimates would appear to be desirable and in such cases references to the despatch may be given.

I have the honour to enclose a list of the items in question.

Yours Commissioner & Comptroller-General,

Montana.

3. A statement of the pecuniary Assets and Liabilities of the Protectorate at the close of the year 1904-1905 and one, partly estimated, of the assets and liabilities at the close of the current year, which, by paragraph 52 of the Financial Instructions should accompany the Estimates, are included amongst the Appendices, as is also a statement showing how the amount required from Imperial Funds as a grant-in-aid for the year 1906-07 is arrived at.

4. Before dealing with the financial aspect of the Estimates, I would wish to refer to the general question of the new form in which they now appear. This being the first year in which the Estimates of the Protectorate have been prepared in accordance with the Colonial Financial Instructions, many reclassifications and changes of system have become necessary and it is probable that further alterations will commend themselves to the Colonial Office.

5. The Estimates, though entirely rearranged since originally prepared by Mr. Epie when acting Treasurer, are these passed by Mr. Jackson when acting Commissioner and submitted to the Colonial Office by the mail of 28th ultimo, subject to the following alterations:-

1. The addition of £200 to the Post Office and Telegraph Schedule for Extraordinary Expenditure, No.20a.

2. The deduction of £10 from the Military Expenditure, Schedule 17.

3. An adjustment of the Schedules for Expenditure on the Medical Service and on Hospitals

3.

and Dispensaries, Schedules 13, 13a, and 14, consequent on a revision of the estimates for these services by the Principal Medical Officer in connection with the appointment of a special sleeping sickness commission in the Uganda Protectorate.

All these changes were duly approved by Mr. Jackson before he left Mombasa.

I attach 2 statements explaining in detail the differences between the totals of the Estimates originally compiled and forwarded by Mr. Jackson to the Colonial Office and as reclassified in accordance with the Colonial Financial Instructions and now submitted. It will be seen that the totals of both Revenue and Expenditure have been very largely increased in the reclassified Estimates. This is due (1) to Railway Revenue and Expenditure being now shewn on separate sides of the account instead of the net profit or loss on working only being brought to account as has been the practice heretofore, and (2) as the inclusion in Revenue Schedule 4 of various items for remunerations in aid which have in the past been treated as deductions from Expenditure.

The authority for these changes of system is contained in paragraph 112 of the Colonial Financial Instructions, but, although this paragraph would appear to deal clearly with Railway Revenue, Receipts from the "Gazette" Office and printing press and hospital fees, I was in some doubt as to whether to deal in a similar manner with the contributions paid by the Railway Department for "watch and Ward" police and by the Uganda Protectorate for Medical services, Hospitals and dispensaries, Telegraphs, and the Gazette. On due consideration it appeared to me that

these

these contributions could be fairly treated as reimbursements in aid and I accordingly treated them as such.

6. To assist me in the work of reclassifying and rearranging the Estimates in the form required by the Colonial Office I had provided myself with a copy of the Ceylon Estimates for 1905. Although these proved of the greatest assistance to me there were necessarily a number of instances in which I was in doubt as to the correct method to adopt. I propose therefore how to deal with the various schedules serially, drawing attention to possible classification or arrangement in order that the necessary instructions may be obtained from the Colonial Office with a view to their correction in future Estimates.

#### (1) Revenue Generally.

It has been the practice in the past to show the majority of the different items of Revenue under separate Provinces. In the reclassified Estimates I have followed the Ceylon procedure and entered them in totals only with the exception of the one item "Hut Tax" in Schedule 3.

The practice of showing Revenue under Provinces does not appear to be of any practical use, and is in fact misleading if considered as an indication of the Revenue earning capabilities of the respective Provinces. For example, the vast majority of sportsmen visiting East Africa take out their Game Licences on landing at Mombasa. The Province of Seyidie thus gets credit for Revenue which would more correctly be apportioned to the Provinces in which the Game is hunted.

Similarly

Similarly under existing circumstances a number of porters from the Kenya Province might seek work at Nairobi in the Ukaraba Province, be registered there and actually employed in the Naivasha Province.

Hut Tax on the other hand is invariably applied to the Provinces in which the hut taxed is situated and it is interesting to note the progress in the various Provinces, the collection of hut tax being one of the principal indications of the extension of effective administration.

#### (2) Revenue Schedule 4.

Fees of Court or Office, Payments for specific service and reimbursements in aid.

I have already alluded to the question of the treatment in the accounts and estimates of certain contributions payable by the Uganda Protectorate and by the Railway Department on account of various services. Although the system adopted in the reclassified estimates would appear to be more in accordance with the Colonial financial instructions, yet at the same time it is liable to give a wrong impression of the Revenue and Expenditure of the Protectorate for the reason that additional staff is maintained for the sole purpose of maintaining an adequate medical and telegraphic service in Uganda and for providing police for the Railway and, were these administrations to maintain their own STAFFS, the East Africa Protectorate establishments would be correspondingly reduced. For this reason it might be considered advisable to treat the contributions as minus entries in the Expenditure schedules instead of as Revenue.

#### (3) Revenue Schedule 5. Interest

*more  
affair*

I have inserted £500 for interest on balance with the Crown Agents invested by them when not required for immediate use. No estimate of such revenue has been prepared in past years but the following account has been credited from time to time through the Crown Agents' account.

1901 - 02	£1067
1902 - 03	nil
1903 - 04	574
1904 - 05	136
1905 - 06 (7 months)	1108

The estimate is necessarily very problematical, depending on the dates on which the various portions of the grant are paid over by the Treasury, but I have considered it safe to count on at least £500, in view of the large balance estimated to be on hand on 31st March 1906.

(4) Revenue Schedule 10. Sale of Government Property.

I have been in some doubt as to the correct classification of royalties. But, taking the view that a royalty is practically a sale by Government of certain products at a percentage of their real value, I have included them in the schedule for "Sale of Government Property".

(5) In their letter to the Foreign Office of February 16th 1905, paragraph 6, the Treasury comment on the fact that the procedure for crediting agricultural revenue to the agricultural vote was not carried out in the estimates for 1905-1906. As however, no alteration was made in the Estimates eventually sanctioned, I presume that the system of showing the proceeds of the sale of agricultural

produce

produce as Revenue and not as a deduction from  
Expenditure was agreed to, more especially as this  
system would appear to be more in accordance with  
the Colonial procedure. I have made a note of this  
Reaching under the Agriculture Expenditure Schedule  
(No. 22) in order that the net cost of the Department  
can be seen at a glance.

(6) I was also in some doubt regarding the classification of the Revenue from "Woods and Forests" the Director of Agriculture, who is temporarily in charge of the Forestry Department, being on tour and therefore not available for consultation. He has now returned and I have discussed the question with him. I learn from him that his estimate for "Rubber", £750 and for "Miscellaneous", £300 includes, <sup>besides</sup> royalties also rents on areas leased for the specific purpose of collecting rubber, mangrove bark, fibre etc.

This Revenue would perhaps more accurately be classified under Schedule 7, Rents of Government Property, but Mr. Linton is most anxious that all Revenue from forest areas should be shewn separately for purposes of comparison with the expenditure schedule of the Forestry Department. I would suggest that in future years a separate subhead be opened under schedule 7 for "Rents from forest areas". In some cases the difficulty of classification is increased by the fact that the royalties imposed are subject to a minimum rental (stated in the leases) i.e. if the royalties for the year exceed this minimum rent is charged, but if they do not come up to it the rent is charged minus the amount actually paid in royalties.

19

In such cases I would suggest that the  
whole amount collected, whether as rent or royalty,  
be treated as royalty.

(7) Expenditure Generally.

No special indication of pensionable Officers has been made in the Estimates for the reason that under the existing regulations all Officers on the permanent staff drawing salaries at the rate of £100 a year or upwards are pensionable. On the other hand all temporary appointments have been duly noted so that the pensionable staff can be readily distinguished, without prejudice to paragraph 20 of the Colonial Financial Instructions.

(8) Nor have the cases in which officers are provided with official residences been noted. The general practice, though I can find no actual regulations on the subject, is that at headquarters (Vernosa) all European Officers are provided with houses or quarters and at all outstations the complete Government staff is housed by the Government. Owing, however, to the insufficiency of the existing house accommodation and the constantly increasing staff, temporary arrangements have to be made and many officers for whom it is hoped eventually to provide houses are at present residing in rented quarters, rooms, tents etc. Furthermore to suit local exigencies officers are in many cases housed one day in a Government building and the next in rented quarters or tents so that is impossible to state accurately what officers are actually provided with an official residence.

(9) The general head for "Transport" has been retained with the exception that all items for

Military, Survey Department and Public Works transport have been eliminated and included in the estimates of the respective Departments.

A further distribution of the transport.

vote has not been possible in these estimates, as no record of departmental transport has been kept in the past. I have requested the Director of Transport to keep a careful record from January next and it is hoped that in the estimates for 1907-1908 the head "Transport" will disappear - the departmental votes being proportionately increased. The existing system of a general Transport Head, though very convenient, is considered unsatisfactory as no proper control can be exercised over the Expenditure and extravagances are therefore liable to occur.

(10) It has been found impossible to allocate "Rents" to the Departments concerned as, as already stated, the occupation of rented quarters by particular officers is subject entirely to local exigencies. This item has therefore been retained as a subhead of Public Works and is shown under Public Works Recurrents.

(11) The question of an incremental scale of pay for the subordinate staff being still under consideration, the practice of former years of inserting in the Estimates small increments for deserving officers has been repeated for 1906-1907. This would appear to be contrary to paragraph 16 of the Financial Instructions, but the rates of pay of clerks etc. have never been definitely fixed and for the last 10 years they have been in the habit of looking forward to periodical increments; and it would be a very great hardship if the rates of pay were considered to be definitely fixed as included in the current year's Estimates.

~~(12) Abstract of Expenditure.~~

A total, £18746, has been inserted for the Survey Department and the Land Office, this being the amount sanctioned for these services, vide Colonial Office telegrams of November 16th, 21st, and 22nd, 1905.

The details of the sanctioned scheme have not yet been received from the Colonial Office but blank pages have been left in the body of the Estimates for their eventual inclusion in manuscript.

~~(13) Schedule 4, Deputy Commissioner's Department and Secretariat.~~

I have included in this schedule the salary and language allowance of the Assistant Deputy Commissioner but, as this Officer is also a Sub-Commissioner of one of the Provinces and is only called upon to perform his duties in connection with Central Administration in cases of emergency he might perhaps have been more correctly shown under the Head "Provincial Administration".

~~(14) I have shown under the head "Deputy Commissioner's Office and Secretariat" the Printing Press and "Gazette" Office, which are in the charge of one of the Secretaries. This Office was formerly shown under a heading "Printing and Stationery" which now disappears.~~

~~(15) The head "Provincial Administration" includes the Sub-Commissioners, Collectors, Sub-Collectors and their staff, formerly classified under the head "Administration". The former head "Native civil administration" is also distributed through the "Provincial Administration" Schedule.~~

~~(16) Schedule 5. Port and Marine Departments.~~

~~This Schedule is divided into three parts.~~

11.

Part 1 "Port Office" is the schedule formerly shewn as "Port Office". Part 2 is entitled "Boats and Launches" and includes the items formerly classified under a heading "Marine". I was in some doubt as to whether to include these items in the "Port and Marine" Schedule or whether to allocate them to "Provincial Administration", the boats and launches being for the greater part in the charge of Administrative Officers and maintained for provincial administration purposes.

Part 3 is the expenditure in connection with the Protectorate S.S. "Juba", which was formerly shown in the Schedule "Customs and Shipping". Although the head "Port and Marine" would appear to be the better classification, it should be noted that the "Juba" is in the charge of the Chief of Customs.

#### (17) Schedule 18. Miscellaneous Services.

This Schedule includes such general charges as cannot conveniently be apportioned to the Departments concerned.

In former estimates "Station Stores" and "Language Bonuses" were classified under "Administrator", "Printing and Stationery" under a head of account bearing the same title which included also the "Gazette" Office, "Grant to Crown Agents", "Commission to Agents" and "Exchange" under the head "Miscellaneous Expenditure" and "Telegrams" and "Postages" under "Post and Telegraphs". The item "Allowances to Stanili examiners" now appears for the first time.

(18) Schedule 2Qa, Post and Telegraphs, special expenditure.

I have included under this head all telegraph construction, but was in doubt as to whether Public Works Extraordinary would not have been a more correct classification.

7. I have now the honour to refer to the financial aspect of the Estimates for 1906-07.

The following statement shows the Revenue, Expenditure, Deficit and Grant-in-aid required as compared with 1905-06:-

Year	Estimated Revenue	Expenditure		Deficit	Grant-in-aid
		£	£		
1905-06	163600	403360	240360	214000	
1906-07	395828	635268	239440	176847	
Increase or decrease	+ 232828	+ 231908	- 920	- 37153	
in 1906-07					

The very large apparent increases in both Revenue and Expenditure are, as explained in paragraph 5, due to the change in system of classification.

Had the estimates for 1906-07 been prepared as for previous years the Revenue would have been shown at £202392 the Expenditure at £441652 the following items being deducted from both Revenue and Expenditure:-

Railway expenditure £177554

Gazette Office Revenue 200

Hospital Revenue 300

Reimbursements in aid:-

Medical 7440

Hospitals & dispensaries 4366

Telegraphs 2376

"Gazette" Office 200

Brought forward	£.192436
Police	<u>1000</u>
	£. 193436

The increase in Revenue in 1906-07 would appear at £39392 and in Expenditure at £38472.

For purposes of comparison it is more convenient to consider the estimates for 1906-07 as if they had been prepared as in former years.

#### 8. Revenue.

The increase of £39392 is the net increase on the total of all heads. Eliminating the item for "Land sales", which being of a capital and therefore non-recurrent nature is shewn separately in the abstract of Revenue, the increase in ordinary Revenue is £44384.

The principal increases occur in:-

Customs duties	£. 7000
Game licences	3546
Hut Tax	17187
Post and Telegraphs	1907
Railways (profit shewn for first time)	9646
Rent of lands	925
Woods and Forests	920

There is a falling off in the estimated Revenue from sales of Lands of £4992, but in this connection it should be noted that the original estimate of £12650 for the current year appears to be excessive and it does not now appear likely that more than £1650 will be realized.

This I understand is due to the question of the granting of freehold titles being still under consideration.

Of the increase in Hut Tax Revenue some £4500 must be ascribed to the increase in the rate of the tax in the Coast Provinces, but the remaining £12500 is attributable to the extension of effective administration in the Interior.

9. Expenditure.

Increase £38472.

Excluding Public Works Extraordinary, which for 1906-07 amounts to £78599 and for 1905-06 to £53691 (vide enclosed statement B) the increase in expenditure asked for 1906-07 is £16564.

In the abstract of expenditure page 31 of the estimates the increase (exclusive of Public Works Extraordinary) is shown at £58827 the difference of £42263 being due to the reclassification and consisting of:-

Additions to both Revenue and

Expenditure vide paragraph 7 £193436

Less amount added to Schedule 21

in figures for 1905-06 to

show gross Expenditure on

Railway instead of net loss

only

151173

£42263.

The notes in the printed estimates explain the increases in the 1906-07 figures over those for 1905-06 subject to the items detailed in enclosure 3 to be dealt with in the covering despatch.

In connection with the increase of £21908 for Public Works Extraordinary it should be noted that the 1906-07 figures include an item of £15093 for transport which would in previous years have been allocated to the general transport vote so that the actual increase for Public Works Estimate is £6815 only

Of the increase in Hut Tax Revenue some £.4500 must be ascribed to the increase in the rate of the tax in the Coast Provinces, but the remaining £12500 is attributable to the extension of effective administration in the Interior.

9. Expenditure.

Increase £.38472.

Excluding Public Works Extraordinary, which for 1906-07 amounts to £75899 and for 1905-06 to £53591 (vide enclosed statement B) the increase in expenditure asked for 1906-07 is £16564.

In the abstract of expenditure page 31 of the estimates the increase (exclusive of Public Works Extraordinary) is shown at £58827 the difference of £42265 being due to the reclassification and consisting of:-

Additions to both Revenue and

Expenditure vide paragraph 7. £193436

Less amount added to Schedule 21

in figures for 1905-06 to

show gross Expenditure on

Railway instead of net loss

only

151173

2.42263.

The notes in the printed estimates explain the increases in the 1906-07 figures over those for 1905-06 subject to the items detailed in enclosure 3 to be dealt with in the covering despatch.

In connection with the increase of £21908 for Public Works Extraordinary it should be noted that the 1906-07 figures include an item of £15093 for transport which would in previous years have been allocated to the general transport vote so that the actual increase for Public Works Estimate is £6815 only.

10. Deficit.

Decrease on 1905-06 £920.

In order to show a reduced deficit for 1906-07, Mr. Jackson, at the last moment, struck out a number of items in the Public Works Extraordinary schedule for which it had been intended to make provision. The more important of these were:-

- (1) £6460 for a quarantine station at Mombasa, including water supply and landing jetties, and
- (2) £7386 for purchase of certain houses at present rented by Government from an Indian merchant at rentals of 10% on their cost.

The decrease in the deficit would have been greater, but that provision has been made for revotes of expenditure already sanctioned for 1905-06 but which will not be expended by the end of the financial year. Had the practice of previous years been followed, these items would not have been reinserted in the Estimates but authority would have been asked to incur the expenditure from balances in hand. No alteration in the amount required as a grant-in-aid would have been shown.

11. Grant-in-aid.

The amount required as a grant-in-aid for 1906-07, £176847, is computed on the estimated financial position of the Protectorate on 31st March 1905 (vide Appendix C to the Estimates, page 307.)

In estimating the balance on hand at the close of the current year, no account has been taken of any savings on the Railway vote of £10000, although it appears likely that the original estimated loss on working will be converted to a very handsome profit.

16.

This has been done at the request of the Manager, who informs me that he is submitting a scheme for the utilization of my savings and profit for the purpose of important works at Killindal harbour.

The amount asked as a grant-in-aid for 1906-07 is considerably less than the amounts granted for the past four years.

The following statement shows the amounts voted since the Protectorate has existed:

1895-96 (9 months)	£. 50975
1896-97	101700
1897-98	110000
1898-99	144000
1899-1900	110000
1900-1901	227000
1901-1902	93000
1902-1903	313600
1903-1904	286000
1904-1905	251133
1905-1906	214000.

I have the honour to be,

Sir,

Your most obedient

humble Servant,

C. C. Bowring.

Treasurer.
