CONVENIENT AUTOMATIC DEVICES— Starterator, combining accelerator and starter-button—Vacuum automatic spark control—auto-matic heat conrol on carburctor—No Draft Ventilation.

TRIED AND PROVEN FEATURES—Octane Selector—Silent weather brakes. Torque tube drive.

WHY CARS WITH KNEE ACTION GLIDE.
When the old type care meet a bump, the still front springs lift the front higher than the rear compressing the rear springs. Thus the rear whoels striking the bump compress the springs still further. On crossing the bump compress the springs still further. On crossing the bump the rear springs relaxes, pitching the care upward and throwing the passengers violently forward.

With the soft front springs of "knee-action" wheels, the car remains practically level causing less rear spring compression. Pitching is thus eliminated and your ride changes to a glide,
