How Nairobi Took The News

Nairobi took the news of Japan's surrender quietly. There had been no mass weeping, so many had been disappointed that the official announcement of the end of the war came rather as an anticlimax. It had been expected by soldiers of the garrison and by the African people of Nairobi, and by the British people of Nairobi, and by the British people of Nairobi.

Put your best face forward . . .

Rare is the lovely woman who has not two faces. The one Nature gave her, and the infinitely lovelier one her beauty-treats create. Loveliest of all overtones is to seem without the need of art, and to make you look as though your beauty was heaven's gift to Yardley's special talent.

INGREDIENT FOR COOPER'S LICE PREPARATION IN ENEMY HANDS

The principal ingredient for Cooper's Lice Preparation used to come from the Far East—until they fell in Japanese hands.

Until the war is over, and until conditions permit the production of Cooper's Lice Preparation, other measures must be taken. No farmer can afford to let cattle lose the life-blood from his after to let cattle lose the life-blood from his.

Little Fly can help. Sprayed on to infested animals at a dilution of 1:400, it brings the blood-sucking activities of cattle lice to a grinding halt. But a second treatment should be given on 14 days later to deal with the second generation.

CONTROL THROUGH ARTIFICIAL INSEMINATION

Possibility Of Breeding To The Desired Sex

The Farmer's Weekly recently published an interesting article on artificial insemination. It was written by Mr. P. F. Wall. It pointed out that the sex of the offspring of a cow is determined by the sex of the sperm that fertilizes the egg. It also pointed out that the sex of the offspring of a cow is determined by the sex of the sperm that fertilizes the egg.

What happens with this? The sperm of the bull contains the Y chromosome, which is the sex-determining factor. If the sperm of the bull contains the Y chromosome, the offspring will be a male. If the sperm of the bull contains the X chromosome, the offspring will be a female.

It is not generally known, however, that it is possible to control the sex of the offspring of a cow by artificial insemination. This is done by using sperm from a bull that has a high percentage of Y chromosomes.

There are a few of the diseases which are common to both man and woman. These are the venereal diseases. These are the venereal diseases. These are the venereal diseases. These are the venereal diseases.

It is a well-known fact that the sex of the offspring of a cow is determined by the sex of the sperm that fertilizes the egg. It is a well-known fact that the sex of the offspring of a cow is determined by the sex of the sperm that fertilizes the egg.

Operation—Spraying!

(By John Stewart Galt)

ONCE or twice in my life I have been called upon to advise a farmer on the best way to protect his crop from insect pests. In the first instance, I have always advised him to spray his crop with a good insecticide. This is the only way to protect his crop from insect pests. ATTENTION OF FARMERS

Have you checked over your grain harvesting machinery? Whether you use a harvester or a grain binder, NOW is the time to go over it carefully and make sure that all the rollers and harrows are adjusted and that all nuts are tight and no bolts are missing.

Due to shipping difficulties it must be realized that those who wait until the last minute to order their spare parts may be disappointed. If you act now and the part you require is not available, it may be possible to have one made, but this requires time—therefore, DON'T DELAY, and don't forget the platform and elevator conveyance when checking your machines.
