## Grave Sino-Japanese Developments

### EXTREME TERMS OF AN ULTIMATUM

#### China May Resist

#### POSSIBILITY OF ALLIANCE WITH RUSSIA CONTEMPLATED

There is the prospect of war on a large scale between Japan and China following the former's presentation of an ultimatum containing extreme demands.

What is generally felt that China is in no position to resist independently, there is a strong suggestion that she may enter into an alliance with Russia against Japan.

If the Japanese demands are acceded to, most of North China would become in effect a province of Japan.

#### Annexation Policy

The Japanese have presented a series of demands which include the whole removal of Government officials and their replacement by those who are friendly towards Japan.

It is also reliably reported that the Japanese are demanding the removal of General Hsing-Chih-Yuan, the Governor of Chahar and all his troops.

Those demands if accepted, and it is difficult to see how the Chinese can refuse—will have the effect of turning most of North China into a Japanese province.

The demands mean the abolition of the Peiping Political Council and subsequently the abolition of the Military Commission having the province to be run by minor officials under Japanese control.

Many thoughtful Chinese declare that the demand in regard to General Hsing-Chih-Yuan is the first step towards the annexation of Chahar and part of Inner Mongolia to a puppet State.

#### Grave Situation

The Sino-Japanese situation is rapidly becoming worse as a result of the new Japanese demands which are a sequel to the ultimatum of four Japanese plenipotentiaries at Changhai in the Chahar Province and alleged ultimatum more serious than that which the Japanese vigorously protested to Shanghai.

#### THE KING

##### An Hour's Drive Near Sandringham

London, June 12.—Within a few hours of the announcement that the King had been located at least a fortnight in the vicinity of Sandringham were disclosed no less than six possible hiding places.

It was stated that the King was about to have a drive through the woods in a closed car.

### £1,000 FREE INSURANCE with the Africa Guarantee and Indemnity Co., Ltd.

### READY TO RETURN TO THE THRONE

#### Message from Ex-King George of Greece

The newspapers publish a letter today from the private secretary to King George of Greece stating that the King was ready when called upon to return to Greece, "not as the head of a victorious party but as the imperial ruler of all parties."

### GRAN CHACO DISPUTE

#### An Armistice in Effect

An armistice was signed at noon today between Paraguay and Bolivia which provides that firing will cease within 48 hours.

### MR. MURRAY JACK

#### Receives a Palestine Appointment

Mr. M. Murray Jack, who has been Principal Registrar of the Supreme Court of Kenya and the Court of Appeal for Eastern Africa since 1920, has been appointed to the post of Chief Registrar of the Supreme Court of Palestine and will leave Mombasa on route for Palestine on July 13 next.

### ROAD ACCIDENTS IN BRITAIN

#### Figures for Whittam Week

Accident figures for Whittam week ended June 13, 1935, show a total of 1,041 accidents, 1,041 injured and 1,041 killed.

### KENTON COLLEGE

#### Exhibition Guided by Head Pupil

A cable has been received by Kenton College, Nairobi, stating that the head boy of the school, G. C. Babson, has been awarded an exhibition to enter Rhineland's well-known English Public School at Teverton, Devonshire.

Nearly £10,000 was spent last year to keep the Norfolk Broads free from weeds, but many famous beauty spots are still threatened. It is almost impossible to sail over the quieter stretches except in small craft.

## £58 THIS WEEK

### CHILDREN'S HOLIDAY FUND MAKES GOOD START

£20 DONATED YESTERDAY

A week ago to-day the "East-African Standard" launched the 1935 Appeal for the children by publishing a letter from the chairman of the Committee.

During the week the promise has been made of the profits on two theatrical productions—one this month and the other at the beginning of August.

After a slow start (lamented yesterday) the Fund made a magnificent start over £20 was received yesterday.

The week closes with just under sixty pounds as the amount to the credit of the Appeal.

That, of course, is just a beginning!

Most of the subscriptions this week came from Nairobi (including H. W. The Mayor and one business firm as such) but the appeal has been heard as far afield as Kisumu—A donation also came in from Nairobi.

Cheques and cash donations will be acknowledged in the columns of the "East African Standard."

The list to date is:

Mrs. Sumner, Mole and Lonsdale branch, E.A.W.L. (Children's expenses and camp equipment).....	215.00
Kipkoros and Turbo branch.....	170.00

### BRITISH WARSHIP ASHORE

#### While Proceeding to Port Sudan

The British warship "Huntingford" grounded on Tuesday on a reef off the rock of Suakin, while en route to Port Sudan. Several compartments are flooded. Salvage operations are at present being undertaken by H.M.S. "Porpoise" and tugs from Port Sudan.—British Official Wireless Service.

### STOCK EXCHANGE

London, June 13.—Stock markets were quiet with War Loan at 103.

Gold was quoted today at 149/100.—British Official Wireless Service.

Mr. Leonard Johnson, of Ferran Lodge, Leicestershire, has been awarded a £25,714 in which £28,567 has been paid in estate duty.

### MR. JUSTICE AVORY

#### Well-Known as the "Hanging Judge"

#### FAMOUS TRIALS RECALLED

Mr. Justice Avory who was in the 84th year died in his sleep last night.—British Official Wireless Service.

Eighty-three years of age and up to the time of his death one of the foremost judges in the King's Bench Division, Mr. Justice Avory (the Hon. Sir Horace Edward Avory) held the post unbrokenly since his appointment in 1901. He was the last of a long line of judges who were appointed to the Bench in 1910, and tried some of the most sensational cases in the history of the Royal Court of Justice.

With the Lord Chief Justice (Lord Reading) and Mr. Justice Horder, Avory sat in the trial of Roger Casement.

The indisputable Patrick Mahon, who murdered his sweetheart in London, Birmingham and afterward disemboweled her body, burning and boiling the pieces, was tried by Avory and condemned.

Mr. Justice Avory had an unblemished record.

#### Obituary

Kenya was granted about £100,000 for road construction. The Governments of Kenya and Uganda have received assistance to cover the expense of the Ripon and Owen Falls on the Victoria Nile in Uganda, and certain areas in the valley of the Tana River in Kenya, to examine their potentialities for the generation of electrical power.

The committee recommended a grant of £77,000 over four years for Tanganyika for beginning a geological and topographical survey of the territory.—British Official Wireless Service.

## Novelty Scarves and Perfect Fitting Hosiery.

"ARISTOC" the British made stocking, popular throughout the world. Wear resisting qualities which cannot be equalled. An Aristoc Hosiery sold by its Pure Silk. The newest colours are now on display.

# GOLD MINING

**NYANZA GOLDFIELDS**

**Options Taken on Adjoining Property**

**Progress Report**

**MINING VALUES: RAIN BEARING WORK**

**ENCOURAGING** developments are possible as indicated in a Progress Report No. 4 issued that was sent by Nyansa Goldfields Ltd. to the Standard the week last. In the 22 values set, present and past, the progress has been taken over.

The Progress Report reads: **Financial Prospect:** Owing to the fact that the work on the adjoining property has been suspended and work on existing property has been suspended, the following progress has been made on other works.

**Block 2.** This shaft is being sunk to a depth of 100 ft. The work is being done in connection with the shaft. The shaft is being sunk to a depth of 100 ft. The work is being done in connection with the shaft.

**Block 3.** This shaft is being sunk to a depth of 100 ft. The work is being done in connection with the shaft.

**Block 4.** This shaft is being sunk to a depth of 100 ft. The work is being done in connection with the shaft.

**GOLD PRICE**

The price of bar gold was quoted in London yesterday at 140/10, an increase of 1d. on the previous day.

**8,818 OUNCES**

**KENYA'S GOLD OUTPUT FOR FIVE MONTHS**

The gold output of Kenya is increasing steadily. The production for May was double that for the year.

For the first five months of 1935, Kenya production totalled 8,818 ozs. unrefined gold.

Month	North	East	West	Total
Jan.	230	325	47	602
Feb.	200	275	11	486
Mar.	1,080	302	219	1,601
April	1,137	244	974	2,355
May	967	880	497	2,344
<b>Total</b>	<b>5,814</b>	<b>1,526</b>	<b>1,478</b>	<b>8,818</b>

## Not So Many New Companies

**FOUR IN 1934: NINE TO DATE THIS YEAR**

**ONLY** six mining companies were registered last year in the Kenyan Mining Syndicate, as another private company, was registered with a nominal capital of Shs. 20,000. Gold Acres of East Africa Ltd., a foreign company incorporated in England, was incorporated in April, with an original nominal capital of £70,000.

The total nominal capital of 116 companies (not confined to mining companies) registered in 1934 was £3,280,000. Forty-six companies were registered last year with a total nominal capital of £1,976,870. To date this year five private mining companies had been registered. Three mining companies were registered in April, but none since.

On April 2 a private company, African Minerals Ltd., was registered with a nominal capital of Shs. 20,000. It is now in approximately 70 ft. It is not expected to strike reef in this shaft until the West East and West shafts are sunk to a depth of 200 ft. mark.

**General.** During the month of April, the Standard has been flooded with a mass of claims which are compulsory with our location. This position is likely to be of value to us. Some stouraging prospects have been discovered which may be developed at little extra cost and any such reef disclosed would almost undoubtedly run into our location. While, conversely, any reefs discovered on our boundary would eventually pass into the option claims.

**As Prosperity Comes Back to the World**

**FINANCIER'S VIEWS**

**Always High in Times of Economic Stress**

An interesting correspondence has been progressing for some time in the financial newspapers regarding the future price of gold and gold shares. In the "Financial Times" last month Mr. F. Schneider, writing from Paris, argued the case for lower values when prosperity returns. He replied to an earlier correspondent (Mr. J. C. Oleson) who also maintained that gold mining shares would be at a much lower price in ten years than today.

Mr. Schneider considers Mr. Oleson's opinion right but that almost all his arguments are wrong. Mr. Schneider, taking the question wherein stands the case.

(1) Bank Rate—A rise in the Bank Rate may cause a fall in capital values, in certain circumstances, and temporarily. But there are not most above (with the exception of gold shares) much higher in 1928-29 than now, despite a Bank Rate varying between 4½ and 6 per cent.

(2) Gold producers—A return to prosperity has always the effect of raising prices, even when the monetary policies of certain Governments do not especially favour a rise.

(3) Lack of confidence—The argument that Central Banks require a larger proportionate gold backing at present on account of lack of confidence is wrong. If a few banks of issue have large reserves it is not lack of confidence which inhibits them to hoard gold, but this is due to the fact that large amounts of gold have been offered them during the last few years. They would often have preferred to refuse gold if their statistics had allowed them to do so.

(4) Allusion is made to the gold exchange standard. I do not think that anybody who has analysed world economics since 1920 will suggest a return to this system, which is the chief cause of the present world crisis being more accentuated than any previous depression.

(5) Private hoarding—When private hoarding ceases, an important step towards the revival of world trade will have been made, not only from a psychological point of view, but also technically speaking. The gold thrown out in the market by the hoarders will have to be taken, if nobody else wants it, by the Central Banks which later have also to buy all the gold offered to them by the hoarders. Large offers will, therefore, have no influence whatever on the mining output, nor on the price of gold, under the normal working of the gold standard.

Among the conditions expected to be ruling in ten years I would mention the following—

Great Britain may have returned to the gold standard, and I think most of the former gold standard countries will have done so, but for reasons which I have already explained above. The contrary will rather be the case.

**Conditions More Normal**

It is a fact that increased international trade requires more gold backing, but this increase in the reserves does not necessarily mean an increase in the percentage of the cover. If the difference between gold reserves and circulation (circulation of bank notes and bank credits) is much smaller now than it used to be in 1928-29,

**GOLD SHARES WILL GO LOWER**

**Kagera Tin**

**FURTHER DIVIDEND PENDING RE-FLotation**

The directors of the Kagera (Uganda) Tinfields announce a further dividend of 6 per cent per annum, less tax, on both Preference and Ordinary shares in respect of the period from January 7, 1935, up to the contemplated date of liquidation. This payment is in addition to the Ordinary payment of 3 per cent, making 9 per cent for the year.

Arrangements are being made to convene an extraordinary general meeting to be held at the same time as the annual general meeting, at which resolutions will be submitted for voluntary winding-up with the object of transferring the assets and undertaking to a new company to be incorporated in Uganda. The 6s. shares are at present quoted at 8s. 6d.

Including all countries adhering then to the gold standard, and present prices lower than six years ago, this does not mean that there is too much gold now, but simply that conditions have become more normal. During the period 1924-29, gold production was not sufficient to cope with requirements, and the shortage aggravated during those years has to be re-balanced by the present excess production if any.

In spite of the fact that I am in contradiction with Mr. Oleson's arguments on almost every point, I believe that Gold-mining shares in ten years will be well above the present level. This will be due to the reasons well known to economists and specialists—that is, that Gold-mining shares are lower than general property in at the highest, and highest during periods of general depression.

In all we hope to experience soon a new period of prosperity, and considering that the technical conditions for this will no doubt be reached before ten years, there can be no doubt that the Gold-mining shares will go lower in the long run, although many of them may reach new high records in the meantime.

**COOK WITH BOVRIL**

All good cooks know that a touch of Bovril greatly improves their soups, gravies and cereals. Bovril not only adds nourishment and flavour to its own account, but brings out these qualities in the foods to which it is added. No kitchen is complete without Bovril.

Sunday Sport NAIROBI RAILWAY CLUB'S EXAMPLE

To the Editor, 'E.A. Standard,' Sir—I have received a letter from the Hon. General Secretary of the Nairobi Railway Club, the substance of which I give below; feeling sure that the Secretary and his Committee will pardon me for making it public.

S. H. WINFIELD DIGBY, Kiambu, June 11, 1935.

RATS, CATS AND ELECTRIC LIGHT

To the Editor, 'E.A. Standard,' Sir—Regarding all cats and the apparently non-existent thing called rat lovers.

Nairobi, June 11, 1935.

GLIDING

To the Editor, 'E.A. Standard,' Sir—In view of the interest which is now being taken in aviation matters, it would appear that the time is opportune to suggest enquiry into a sphere which has much to commend it, but to which little or no attention has been paid in this part of the world, viz. Gliding.

The Aero Club requires increased membership; it did so in 1930 when I suggested a gliding section to a member of their Committee as a means to that end.

at least, the Bank rate is far more the creature of the Government than the Central Bank stem of the Commercial Bank.

Yours etc. H. W. COX, Nairobi, June 11, 1935.

THE MONETARY FACTOR IN DEPRESSION

To the Editor, 'E.A. Standard,' Sir—So much time has elapsed since Miss Tatham wrote to you 'E.A. S.' that I may apply to her letter must seem like the exhumation of the dead, but her remarks are so deserving of notice as to demand some comment.

From the last paragraph of her letter she appears to be ignorant of the fact that the largest amount of thinking that 'All men are liars' is the same thing as 'All liars are men'.

Yours etc. M. J. HOGAN, Nairobi, June 11, 1935.

To the Editor, 'E.A. Key-move: No. 1663, 1. B-b3. No. 1664, 1. B-a2.

**Problem No. 1666.** Keethle, Key, 1. P-g3. If 1...Kt x P ch, 2. Kt x Kt mate. The sole intention in this is to find the right waiting-move for a key. Owing to the asymmetrical arrangement it seems clear that the White Pawn on c3 prevents the White Knight going there to mate.

**Problem No. 1667.** Meyer, Key, 1. B-h8. If 1...K-a7, 2. Q-a8, K-a7 (must); 3. Q-g7 mate. If 1...K-g7, 2. Q-c8 ch. If K-a7, 3. Q-h7 mate. If K-a7, 4. Q-g7 mate. If K-a7, 5. Q-g6 mate.

This is a diagonal setting of Healy's famous "Brazil" problem in which a Rook moved along to the end of a rank, making way for the Queen to follow it up and mate from the end square last time. Here the Bishop does a similar manoeuvre, going to a perfectly useless square at the top of the diagonal to make way for the Queen to mate at g7. The difficulty is to realize that the Bishop has to be entirely disposed with, e8 looks a good square for him. The good "try" is 1. Q-g1, with B-h8 as the second move, works perfectly if Black tries 1...K-g7, but is defeated by 1...K-e7. G. Fletcher says: "This gave me a good deal of amusement in trying to get rid of the Bishop until I found the Key-square."

**MR. CAMPBELL BLACK**  
Planning Attacks on Aviation Records

Mr. Tom Campbell Black, who is planning further attacks on aviation records for Great Britain, has ordered a new and improved aircraft from the De Havilland Company. The Comet is expected to be ready at the end of the summer, and will embody a number of refinements and modifications gained from experience in earlier types of the same machine. It will have a cruising speed of 220 m.p.h., at 10,000 ft., and a range of 2,750 to 3,000 miles. Two original Comets have been purchased by foreign Governments, who intend to enter the South Atlantic route with these machines, which can carry quantities of mail and freight at over 200 m.p.h. It is to be mentioned the prestige of Britain in this matter, where she is in the lead, is a matter of which she is justly proud. It is to be noted that the first Comet, built at the factory in Luton, was destroyed by fire on the 11th of June, 1932.

**THE JUNES MESSIAH** played for at the beginning of the month when he hit H. Hodson with a net 69. J. Wheeler was runner-up with 57 not out.

The May Bogy Spoon, cancelled last month owing to rain, was played on Sunday morning, the 2nd inst. T. L. Pringle and W. Fletcher tied for first place with 16 runs to bogey.

The June Ladies' Spoon was won by Miss H. M. Gilbert, who finished square with bogey. Mrs. Lewis was runner-up with one down.

The following are the results of our match against Gilgil played last Sunday at Gilgil, Gilgil menaced first.

K. P. Balfour beat B. D. England, 4/3.

A. K. Gibson lost to J. England, 4/1.

H. W. Isaac lost to N. V. Christie, 3/1.

G. B. Grimwood beat C. F. Hunt, 3/2.

C. H. Ferguson lost to M. C. Culham, 2 down.

A. L. Gibson lost to C. A. Hooper, 4/3.

F. Hunter beat J. F. Higginson, 4/2.

R. Hall beat H. R. Hunt, 6/5.

**Afternoon-Fourball**

K. P. Balfour and A. K. Gibson won by B. D. England and J. England, 3/2.

H. W. Isaac and G. B. Grimwood beat N. V. Christie and C. F. Hunt, 2/1.

C. H. Ferguson and A. L. Gibson beat C. A. Hooper and M. C. Culham, 4/3.

F. Hunter and R. Hall beat J. F. Higginson and H. R. Hunt, 3/2.

A match was played by our ladies against the Gilgil ladies the same day the results are given under Gilgil ladies first.

**Singles**

Mrs. H. A. Turner lost to Mrs. G. B. Sandford, 1 down.

Miss E. Ray beat Mrs. Lewis, 5/4.

Miss J. Henderson beat Mrs. F. K. Walker, 4/3.

Miss Z. Goodwin lost to Mrs. England, 1/4.

F. Hunter halved with Mrs. Higginson.

Mrs. D. H. Moholy lost to Mrs. G. Kinner, 1 down.

**Afternoon-Foursomes**

Mrs. Turner and Miss Ray beat Mrs. Sandford and Mrs. Lewis, 4/2.

Miss Henderson and Miss Goodwin beat Mrs. Wilson and Mrs. England, 4/3.

Mrs. H. A. Turner and Mrs. Moholy beat Mrs. Higginson and Mrs. Kinner, 4/5.

From all I hear our team including the ninth man had a thoroughly enjoyable week-end, we continue to refer to Gilgil's hospitality and Gilgil's course. I am told that the course is in its best seasonal condition, the fittings were exceptionally good. The Brown men consisted although a little fast, due in all probability to rain overnight, and Gilgil still retain their unbeaten record on the home course.

The following will represent the Gilgil team at the annual invitation competition for the Prince of Wales' Troop, on Saturday and Sunday next. First pair: B. D. England and J. Pringle; second pair: R. L. Balthayne and N. V. Christie.

We send a team of ladies to the Hill on Sunday next to represent the team at present, and I understand it will be slightly different from that played at Muthaiga a few weeks ago, but I think our ladies should do well.

The entry list for the Captain's Prize closes on Wednesday next, the 19th inst., at 6.15 p.m. Members who have not yet sent in their entries should hasten at once. The conditions of the competition are as usual, five or ten ladies to play in a full handicap. The first and second rounds will be played on the 21st and 22nd instants.

**October 4 and 5:**  
Nairobi October Race Meeting.

**November 16, 17 and 23:**  
Mixed Open Golf Tournament, Muthaiga G.C.

**December 6 to 8:**  
Ladies' Open Golf Championship, Muthaiga G.C.

**December 7:**  
Kenya Amateur Boxing Championship.

Molo Hunt Point to Point Races.

(Continued in next column.)

**WEEK-END EVENTS**

**Up-country Rugby Team on Tour**

**To-morrow's Soccer Encounter**

**RAILWAY AND Y.M.C.A. WEEK AGAIN**

To-morrow's Double League game between Railway and Y.M.C.A. is an important one, particularly from the point of view of the Railway, if they are to remain in the running for championship honours, they must needs win, but a reverse will put them practically out of the running.

When this meeting just over a fortnight ago on the Commercial ground the home team ran the Railway to a draw, a fair result of the run of the game. The Railway showed the better combination, Y.M.C.A. are slow starters but they shape up well although they have never met formidable opposition they showed at the beginning of the season. Railway will be to take full points and gain ground advantage they should succeed, but they must not take the opposition too lightly, although that is a fault which the Railway team can play clever foot.

In keeping with the rest of the games to date today's encounter should be well worth watching. Both teams can play clever foot.

**Afternoon-Fourball**

K. P. Balfour and A. K. Gibson won by B. D. England and J. England, 3/2.

H. W. Isaac and G. B. Grimwood beat N. V. Christie and C. F. Hunt, 2/1.

C. H. Ferguson and A. L. Gibson beat C. A. Hooper and M. C. Culham, 4/3.

F. Hunter and R. Hall beat J. F. Higginson and H. R. Hunt, 3/2.

A match was played by our ladies against the Gilgil ladies the same day the results are given under Gilgil ladies first.

**Singles**

Mrs. H. A. Turner lost to Mrs. G. B. Sandford, 1 down.

**Condition of the Nakuru Course**

Inspected by K.G.O. Officials and Approved

On Wednesday last, the President, Captain A. K. Gibson, Mr. Tannabill, past President, and Mr. L. Gilbert, Hon. Secretary of the Union, inspected the Nakuru golf course in connection with the Nakuru Club officials. Doubts had been expressed as to whether the Nakuru Club course would be ready for the Championship on the 15th of next month.

After inspecting the eighteen holes it was unanimously agreed that not only will the course be ready, but that it should be in really good condition.

The course is situated above the town, on the slopes of Menengai. It has been found that no undue climbing is called for. The view from the course, and from the most elevated hole, is exceptionally beautiful. The course has been very well watered and includes some really good putting holes.

The Nakuru Club are to be congratulated on their achievement, and particular mention should be made of their Hon. Greenkeeper, Mr. Gray, who has put in so much hard work and obtained excellent results. The Club should be congratulated on their interest and intelligent competitors can be assured that they will be well appreciated.

Large Type of Trap.

### AGE-OLD CUSTOMS AND TRADITIONS

By  
Murray Blake

A PATIENCE which often goes unappreciated is the attribute of the fisherman the world over. However, as it accompanies a philosophy which laughs at prolonged non-success. But this is the fisherman who wades a process "troughed" from the coral sand lagoons of the East African sea bed where to hammer with a mallet of a hammer which is used to drive the posts of a net into the sand.

Fishing, in general, is regarded as an idle and pleasant occupation, one of those native crafts which demands a minimum amount of toil and a soaring tropical sun. The long periods of heat and sun and sea low. But there are times when the tide, forming in over the water, brings some fish to the surface.

into the trap, it affords easy admission but renders escape almost impossible. It is not on the building of the trap alone, however, that success depends. A strong familiarity with the habits of fish, coupled with certain highly developed instincts, is essential. The fisherman who wades to collect his catches and indulge in a continuing experience can arrange to go as passenger in one of the canoes.

#### The First Step

The tide is on the ebb. The breaker hammer with a constant beat on the coral reef a mile out. Between it and the glaring white beach lies a placid lagoon. Through the translucent water its bottom

either end, propel the unstable craft out on to the lagoon with long pointing poles. The passenger gripping a rough thwart to maintain his sitting posture without upsetting the canoe, marks it at the one with which the standing figures retain their balance. Sometimes the end of a pole slips on the coral, but the swinging motion of the strokes is never broken. A glance overboard reveals the shallow bottom. Rainbow-hued fish, distorted into monstrous shapes, dart from cover at the canoe's approach. Slowly the beach recedes into the heat haze as the boat enters the reef break.

position, though perchance a tall palm tree on the distant beach, when brought into line with some distinctive ledge of the coral reef, serves as his guiding mark. Calmly, unharriedly, the diver

of a shop window. With a kick he sees to the surface, and the gun which breaks out on his face as his head emerges is a sure indication that the trap has tensed. He floats lazily for the length of time required by his companion to disrobe and join him in the water. Together, like a couple of por-

to the surface. This is a task requiring great strength of lung and muscle, for the trap is heavily weighted with slabs of coral.

"Samaki!" (fish) they cry delightedly as they hoist their burden into the canoe and follow it with their gleaming bodies. The moment of realization has now come, and the passenger leans forward with keen interest. What does the trap contain? An octopus, perhaps, or half a dozen mullet. A sharp rattling noise, accompanied by the flash of a green, scaly body denotes the capture of a game crayfish which displays its anger by snapping its claws defiantly. Again, the fierce light may fall on the flapping form of a strange tropical fish having vivid but poisonous colorings.

#### Catch Examined

Much care is exercised in examining the contents of the trap before extracting the catch, for these waters are the habitat of viciously poisoning loach which are capable of inflicting poisonous wounds. Others are endowed by nature with secondary fias and are treated with the respect they deserve. But the fisherman, the passenger observes, have a simple means of avoiding direct contact with these unpleasant creatures. The dangerous fish are seized between two slabs and promptly thrown back into the lagoon. The octopus, whose flesh is much prized as bait, is fearlessly grabbed with the naked hand and turned inside out!

The trap is quickly emptied, and primed with fresh bait, is lowered to its resting place on the floor of the lagoon. The canoe moves off, the man in the bow intent on heaving the net in the chain of traps.

It is not always, however, that the investigating diver returns to the surface with a telltale grin. A brief stroke of the hand, as he emerges, is an eloquent indication that the trap is empty. Seizing a double handful of the seaweed in the canoe, he dives again. Then, lying on his stomach on the bottom as before, he thruste the bait into the trap, repeating the operation until sufficient is inserted.

With the incoming tide, their round of inspection over, the fisherman pole the canoe slowly back to the beach. They are chafing impatiently eager to satisfy their passenger's curiosity regarding other aspects of their craft.

The owners of each canoe, here as many as six traps, all constantly distributed at points where the lagoon bottom affords the best natural feeding. There are no arbitrary rules to govern the selection of these points, however, as the fish constantly change their feed-

ing grounds. Careless observation and an intimate knowledge of the lagoon floor are the chief factors which contribute to success.

#### Dangers of the Deep

The fisherman share a common dread of the giant octopus which lurks in deep holes in the coral. In days gone by unwary divers have been seized, never to appear again. It is a case of human tragedy having contributed to human knowledge, for the recognized habits of these ferocious monsters are well known and studiously avoided.

Strangely as it may seem, the fisherman are not greatly menaced by sharks. The protective coral reefs, stretching for miles in unbroken lines, seldom afford a passage of entry for fish as large as these.

#### Another Type of Trap

In addition to their wooden traps, the natives employ others which resemble nothing so much as jumbles of driftwood flung into rows by the tide. These traps, which are permanent fixtures, usually belong to families, being handed down from father to son in successive generations. Although, by reason of their size, they require considerable upkeep in the way of repairs, they sometimes yield large catches. Simplifying it the keynote of their construction.

A long line of stakes, starting from the beach, is driven into the sand, their ends being allowed to protrude some feet above high water level. The aperture between the stakes are filled in with brushwood. At the end of the line

terminating in comparatively deep water, a circular enclosure is constructed of the same material. A small opening is provided in the walls of the enclosure on either side of the point where the straight line of stakes joins it. At high tide, the fish, striking the long barrier, gradually work their way towards the enclosure, seeking escape. Encountering the narrow entrance, they swim in, and when the tide begins to ebb, are unable to get out.

Many strange legends are made in these large traps, including the fierce tiger fish and the barracouta.

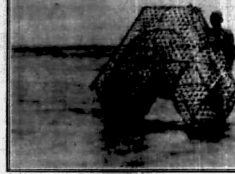

#### The Canoes

At certain seasons of the year the fisherman had their canoes up on to the beach, and turning them upside down, cover them with firewood. Setting alight to this, they carefully clear the undergrowth of the deposits to rid them of a species of marine worm which borers into the tough wood. Many of these canoes, such of which is constructed of a solid log hollowed out by fire and coral, implements, are a century old. Regarded as family property, they are handed down from generation to generation.

When fish are plentiful these happy-go-lucky fishermen display keen business instincts. On the return of their canoes to the beach after an examination of the traps, they are met by a native buyer from the nearest market. Unlike haggling hales done over the disposal of any surplus fish now required for consumption by the fisherman's families. Keen bargaining extends to the selling of even the smallest of fish, with the fraction of a penny.

The Fisherman's Canoe.

Trap for Sinking in Lagoon.

swims towards the trap. Then, lying on his stomach on the bottom as before, he thruste the bait into the trap, repeating the operation until sufficient is inserted.

poises, they dive down to the trap, a cloud of milky bubbles for a moment obscuring their activity. Then, seeing the fisherman hoist it laboriously

To the life outdoors on the beach the activities of these fishermen seem simple and without consequence. The long, elegant canoes, using forth on the ebb tide, appear to move in a purposeless manner from one spot to another in the broad surface of the lagoon. The dim figures of their crews engaged in the performance of some mysterious ritual. A vague curiosity may be aroused by the observation when the canoes return to the beach half filled with flapping fish, but no sudden passes to register into the means of capture. Should he do so, however, a truly remarkable system, involving age-old custom and tradition, is revealed.

#### Design of Traps

While hook and line are employed in all moments when fish are plentiful, these natives rely chiefly on their peculiarly designed traps for subsistence. In shape and construction, the traps have remained unchanged since the days before European occupation of the territory.

At first glance their workmanship seems crude, however, a close inspection discloses a cunningness of design which ensures the maximum strength and durability. The framework of a trap is made up of pliable sticks cut when green and bent to the required outline. Over the frame is stretched a mesh, apparently contrived from fibrous strips of the leaf of the coconut palm, the whole being secured bound together with fibre from the bark of the same tree.

It is to some measure known by the natives that the fisherman to the trap once his construction. Arranged in the form of a cone sloping downwards

of sponge-like coral is closely visible, broken by deep, irregular holes. Minute submarine forests of weed, moved by unseen currents, cause a flickering of shadows in the depths.

While their passenger-to-be waits impatiently, the two owners of the canoes are busily engaged in a preliminary task. Using broken fragments of coconut shell as spears, they scrape from the ledge exposed by the falling tide a species of seaweed growing with a minute form of marine life. They work with meticulous care, selecting only those patches of weed which pass close scrutiny. This weed, they explain, is to be used as bait for their traps, though the catch is not merely a heathy, unpalatable mass.

Having thrown the seaweed into the bottom of the canoe, the fisherman, standing upright in

ers on the reef butts with increasing boldness on the ebb.

#### The Diver

Following a signal from the man in the bow the canoe is brought to a stop. A large lump of coral, attached to one end of a length of plaited fibre secured to the gunwale, is dumped overboard and sets at a very efficient anchor. For a second the native in the stern peers down into the water, then, diving himself of his scanty clothes, dives cleanly to the bottom.

The passenger, watching the descent of that brown body, is temporarily at a loss to discern the diver's objective. Close observation, however, brings into gradual focus the dim outlines of a fish trap half obscured by waving seaweed. There is no

long on the surface to mark its

Another instalment of Gordon Shaw's Stirring Ranch Story for Boys.

Trudy Tock was stropping Harry's razor while the old fellow was doing his morning shave. "Evening should do this for five minutes per morning," he said; "it keeps you in trim and makes you cut a fine figure."

But just then the slipping rope brought in the razor catching it over with a swish, cutting the electric light wire. Down came the shade, bump right on to Harry's head. He was so startled that he cut the light-headed after that!

And went on with his shaving when Trudy brought his can of hot shaving water. "I'll pour it out in a moment," went on Harry, still hopping about.

He was as good as his word, but unfortunately he poured it all over his head, for the slipping rope caught in the spot of the can. Then the other thought it time to stop cut.

A page for young people THREE LITTLE PIGS QUILT

Pattern No. 9: "Chinny-Chin-Chin."

Such impudence from little pigs about to be gobbed up by the Wolf at their door! With block No. 8 this tells what they said, and we did suggest that you do these in a different colour from the Wolf word blocks; perhaps they will frighten the red back of courage. The two "chin-chins" would be in the same way with a quilt-stitches done solid the nostrils.

GINGER DICK

"How dare you trespass in the Wood?" "I'll have you tracked, I'll have you kicked, perhaps I'll have you choked."

WELL DONE, GINGER!

Young Edward George was rather scared, as you may well suppose. "I'll have you tracked, I'll have you kicked, perhaps I'll have you choked."

A Wild West ROBIN HOOD

The Bow and Arrow Ranch, owned by Old Man Goddard, was a wild of the owner managed by Robin Hood characters. There were Bob Hood, the youngest, and several other boys...

THE ESCAPE

So there was nothing else for them to do but try and regain possession of the team and light wagon they had borrowed from the Bow and Arrow Ranch...

"We left that bad hunter, Ohio Ollie, and his crew behind old Chivvies' shack," said Bill. "Maybe the old piker never sees us again, and ought to go and have a look..."

Bob and Bill tracked the gang to their lair and while watching them saw Lincoln Greene join the mob. He was a heavy-set man...

Back to Camp. The man was well up when they found their rather anxious friends again. None of them had turned in properly for the night...

Hand Stripping After Machine Milking MARKET REPORT Brighter Sisal Prospects

NOTES OF THE WEEK

The Nairobi Show... The Nairobi Show which has been arranged for the livestock...

The Effect of Grassland Research... On several occasions we have drawn attention to the rapid advance in the technical efficiency...

The Basis of Breeding Policy... There is little doubt that in assessing a sire for his breeding...

Kenya Wool in Kenya Demand... The following Market Report dated May 1938 has been kindly prepared by Messrs. Dalbey and Co., Ltd.

Coffee in the time of the year... Coffee enters the year, but this is a very satisfactory entry...

Consumer must acquire an accurate capacity to purchase... The consumer must acquire an accurate capacity to purchase...

The Influence of Live Weight... Given has studied the subject, using as data measurements of American Jersey sires...

Two methods of manipulation were tried in an effort to reduce the amount of stripping retained in the udder...

Production of Milk... The United Council of Agriculture for East and Central Africa...

II. WHY? FARMING?... The preceding paragraph is a brief and inadequate resume of an unpleasant situation which has arisen...

IV. A DISASTROUS CONTINGENCY... Kenya has not escaped the prevailing and infectious enthusiasm for marketing schemes.

A Safety Measure... Within said Canon also enumerated that certain devices should be used as a safety measure...

THE BUREAU... The committee understands that investigation into the costs of production of milk is now being conducted by the Food Council...

III. THE MIDDLEMAN'S PROFIT... One fact stands clearly, that the farmer's present position is not an improved efficiency...

Impairment of Sterility... Given also makes a correlation between the different methods by which it is possible to estimate the probable future production...

Methods of Manipulation... Two groups of cows were used to compare the effect of hand stripping after machine milking...

THE BUREAU... The committee understands that investigation into the costs of production of milk is now being conducted by the Food Council...

THE BUREAU... The committee understands that investigation into the costs of production of milk is now being conducted by the Food Council...

Eliminating Waste... Production of the most suitable type of pig for bacon can be carried out most profitably by converting a pig's carcass into a side of bacon...

GAUCHADA MATERIAL BARBED WIRE. Made by the Whitecross Company of Warrington of high strain steel. Put up in rolls of 50 lbs. containing 675 yards with a breaking strain of 1110 lbs.

G. NORTH & SON LTD. (Incorporated in South Africa.) NAKURU NAIROBI. "Gauchada" the Wire that will not Rust. PRICE Shs. 16-50 per roll NETT CASH.

STRAATHMORE AYRSHIRES. PROMOTE PROSPERITY. BRED IN KENYA.

The first line bred sire imported for use in the Straathmore herd. Dam, Dehlish Moxine (20842), Senior 2 year old class leader, 1933. Official test record 11,979 lbs. milk, average test 4.6 per cent. B.L. 619 No. 1. In 27th days. Governor of Dehlish, sire of Maxine, sired 13 of 7,305 class leaders.

Dehlish Moxine was 2nd Grand and Sydney Show, under 12 months. 1st Grand and 1st Breeders Plate, Sydney, under 2 years. 1st Grand, 2nd Sydney under 8 years. 1st Grand, 2nd Sydney under 4 years. 1st Sydney and 1st F.A. Prize, 1934. Inspection of the herd suitably invited any day without obligation.

THE ARTIFICIAL DRYING VALUE OF ACCOUNTS IN FARM MANAGEMENT.

World Wide Experiments. A COMPLETE SYSTEM OF ANIMAL FEEDING. SOLVING THE ENGINEERING PROBLEM.

(By H. E. Woodman M.A., Ph.D., D.Sc. in the Journal of "The Ministry of Agriculture.") (Part II.)

Since the initiation of the Cambridge inquiry, experiments have been carried out in many parts of the world, notably in this country, Sweden, Denmark, Germany and the United States, with the object of solving the problem of grass-drying from the economic point of view. The entire collection of young grass no longer presents any serious difficulties. When the weathering period is limited to 12 to 14 weeks in length, it may be cut with an ordinary farm mower, the weathering period is limited to 12 to 14 weeks in length, it may be cut with a horse-rake and filled into carts with three or four trucks. For shorter grass, however, a re-design or sweeps, rakes and special implements such as the Wilder combination of mower, elevator and trailer are examples of the efforts that are being made to overcome this difficulty.

The series of necessary carried out in recent years at the Jeddite Hill Agricultural Research Station, more especially on the influence of quick drying at high temperatures on the digestibility and nutritive value of young grass merits particular notice. This work has shown that a band drier operating with furrows gases at 200 deg. C. gives a product containing no significant loss of digestibility as compared with the fresh grass and that the loss of water is not accompanied by a loss of nitrogen. It has also demonstrated that the temperature of the drying process should be high as 700 deg. C. under which conditions drying is extremely rapid and does not cause any marked impairment of quality and feeding value, provided it is operated in such a manner that the material is removed from contact with the hot gases as soon as it is dry. Another important result of the Jeddite Hill research is the discovery that under satisfactory conditions of drying, most of the contents of the fresh grass is retained in the dried product, and that the use of the latter as a winter ration for dairy cows results in the production of a yellow butter comparable with that produced when the cows are at grass in summer. The dried grass has been found to have a high vitamin potency. Thus, having some of the principal deficiencies of the winter ration fulfilled.

It is interesting to record that the foregoing facts have been amply confirmed by very recent investigations in the United States. These results refer to a dried in a rotary-type, high-temperature dehydrator, registered a 20 per cent. increase in nutritive value in an artificially dried young grass have been demonstrated. Further, the engineering problems connected with the drying of young grass in the way towards solution. Driers of the tray, drum, pneumatic, conveyor and band types have been experimented with, the names of several of these types of drying appliances having become quite well known during recent years, both at home and abroad. Some are also attending the efforts that are being made to design suitable plants for use on individual farms.

If the position in respect of the nutritional and engineering aspects is satisfactory, what of the economic aspect? It is not surprising that the writer first put forward the proposal of drying young grass in a winter concentrate. The price of the common concentrates, such as molasses, is very high, and it is not surprising that the price of such a concentrate, for example, was £13 10s. per ton, and in such circumstances, the production of dried grass offered attractive possibilities. Since the price of molasses has risen considerably, it seems more than likely that the price of such a concentrate will rise still further. For this reason, it is perhaps not surprising that the future of the grass-drying process.

Small Scale Driers. Without attempting to enter fully into this aspect of the question, it may be stated that if some of the driers now to be obtained under present conditions respecting the economic prospects of the position are much more favourable for small-scale practice than the position. A farmer could use a small-scale drier at certain times with his ordinary mowing machine, and at other times it could be used to dry grass which would otherwise be wasted. Further, by this means, the fresh growth of grass in the winter could be obtained and prevented from running off.

The Cambridge work emphasizes the superiority, in respect of digestibility and starch equivalent, of dried young grass over all the forms of lucerne meal and leaf-moss.

Yield Per Acre. The yield, in terms of lbs. of dry matter per acre, from permanently sown grass, is very much increased by fertilizing and cutting at monthly intervals, has been found to be under Cambridge conditions, of the same order as that from the lucerne crop. In one season, such as 3.8 tons per acre of dry-matter (assuming 10 per cent. of moisture) was obtained.

The yield, however, may be much lower in a wet, disordered season, and for this reason, grass-drying on an industrial scale should be attempted in those parts of the country where rainfall is usually sufficient to keep herbage growing actively throughout the whole season. The possibilities of the method employed by a recent grass-cutting trial at the Hannah Research Institute, Ayr, in 1932, are of interest. A yield of over 15 tons per acre of air-dry grass (10 per cent. of moisture) was obtained by cutting at bi-weekly intervals.

It is not surprising that the results of the Cambridge work have led to the suggestion of the use of artificial fertilizers in the silage of ammonia on grass land areas set aside for cutting and concentrating. Such a method of converting nitrogen into protein is well known. Such treatment leads also to an enhancement of the nutritive value of the product. A potency of the dried grass product. The nitrogen content obtained by the use of complete mineral manures together with artificial nitrogenous fertilizers is naturally related to the type of grass selected. In 1930, a good grass year, the average increase in the yield of dry-matter was 100 per cent. of the dried product distributed throughout the United Kingdom from the application of 100 lbs. of nitrogen per acre, with periods of small dressings with periods of 100 lbs. per acre. The individual improvements, however, ranged from 45 per cent. to 100 per cent. on good British fattening pasture and on the European dry grass, the yield of the "nutrient" herbage of the Wiltshire Down. In nearly every case an increase was accompanied by an improvement in the protein content as measured by the protein nitrogen ratio.

The Economic Aspect. It may fairly be claimed that the results of the Cambridge work have been demonstrated. Further, the engineering problems connected with the drying of young grass in the way towards solution. Driers of the tray, drum, pneumatic, conveyor and band types have been experimented with, the names of several of these types of drying appliances having become quite well known during recent years, both at home and abroad. Some are also attending the efforts that are being made to design suitable plants for use on individual farms.

Thus, the business man is frankly amused at the question: "Does good farming pay?" because he is according which is very good value in farm management, and just as the foundation of a house, so the foundation of a business is financial accounts form, even as the preparation of a budget, the necessary first step in the operation of what is called the "Farm Management Accounts."

Limitations of Simple Accounts. Do not let there be any misunderstanding. We may say that simple financial accounts are of very limited value as an aid to more efficient management, but this does not mean that they may not have considerable value from other points of view. For example, they may be necessary or desirable for income tax purposes, and they are certainly both necessary and desirable wherever the firm is under a salaried manager. Further, the drawing up of a statement of profits or loss on each year, or, perhaps, however simple it may be, should be regarded as a part of the management of the business. The fact remains that, although great emphasis has been placed on the importance of these and other uses of simple financial accounts, it is not the keeping of farm accounts has been viewed from the point of view of the manager which properly speaking is the business book-keeper. Again and again farmers have objected that accounts are "not history," that the summary which has happened, but they give little or no indication as to why it has happened, or how to prevent or improve on it.

For example, simple accounts will show the farmer that his milk receipts have fallen, or that his reduction in the price of milk—information which is very valuable, but which they do not show him whether his receipts are better or worse because of some alteration in the price of milk, or whether the summary obtained only by means of properly kept accounts. It may be said that the summary is enough to talk about management accounts after the fashion of a book-keeper. It is not surprising that the writer first put forward the proposal of drying young grass in a winter concentrate. The price of the common concentrates, such as molasses, is very high, and it is not surprising that the price of such a concentrate, for example, was £13 10s. per ton, and in such circumstances, the production of dried grass offered attractive possibilities. Since the price of molasses has risen considerably, it seems more than likely that the price of such a concentrate will rise still further. For this reason, it is perhaps not surprising that the future of the grass-drying process.

Without attempting to enter fully into this aspect of the question, it may be stated that if some of the driers now to be obtained under present conditions respecting the economic prospects of the position are much more favourable for small-scale practice than the position. A farmer could use a small-scale drier at certain times with his ordinary mowing machine, and at other times it could be used to dry grass which would otherwise be wasted. Further, by this means, the fresh growth of grass in the winter could be obtained and prevented from running off.

The Cambridge work emphasizes the superiority, in respect of digestibility and starch equivalent, of dried young grass over all the forms of lucerne meal and leaf-moss.

Yield Per Acre. The nitrogen content obtained by the use of complete mineral manures together with artificial nitrogenous fertilizers is naturally related to the type of grass selected. In 1930, a good grass year, the average increase in the yield of dry-matter was 100 per cent. of the dried product distributed throughout the United Kingdom from the application of 100 lbs. of nitrogen per acre, with periods of small dressings with periods of 100 lbs. per acre. The individual improvements, however, ranged from 45 per cent. to 100 per cent. on good British fattening pasture and on the European dry grass, the yield of the "nutrient" herbage of the Wiltshire Down. In nearly every case an increase was accompanied by an improvement in the protein content as measured by the protein nitrogen ratio.

The Economic Aspect. It may fairly be claimed that the results of the Cambridge work have been demonstrated. Further, the engineering problems connected with the drying of young grass in the way towards solution. Driers of the tray, drum, pneumatic, conveyor and band types have been experimented with, the names of several of these types of drying appliances having become quite well known during recent years, both at home and abroad. Some are also attending the efforts that are being made to design suitable plants for use on individual farms.

If the position in respect of the nutritional and engineering aspects is satisfactory, what of the economic aspect? It is not surprising that the writer first put forward the proposal of drying young grass in a winter concentrate. The price of the common concentrates, such as molasses, is very high, and it is not surprising that the price of such a concentrate, for example, was £13 10s. per ton, and in such circumstances, the production of dried grass offered attractive possibilities. Since the price of molasses has risen considerably, it seems more than likely that the price of such a concentrate will rise still further. For this reason, it is perhaps not surprising that the future of the grass-drying process.

Small Scale Driers. Without attempting to enter fully into this aspect of the question, it may be stated that if some of the driers now to be obtained under present conditions respecting the economic prospects of the position are much more favourable for small-scale practice than the position. A farmer could use a small-scale drier at certain times with his ordinary mowing machine, and at other times it could be used to dry grass which would otherwise be wasted. Further, by this means, the fresh growth of grass in the winter could be obtained and prevented from running off.

The Cambridge work emphasizes the superiority, in respect of digestibility and starch equivalent, of dried young grass over all the forms of lucerne meal and leaf-moss.

Yield Per Acre. The yield, in terms of lbs. of dry matter per acre, from permanently sown grass, is very much increased by fertilizing and cutting at monthly intervals, has been found to be under Cambridge conditions, of the same order as that from the lucerne crop. In one season, such as 3.8 tons per acre of dry-matter (assuming 10 per cent. of moisture) was obtained.

Thus, the business man is frankly amused at the question: "Does good farming pay?" because he is according which is very good value in farm management, and just as the foundation of a house, so the foundation of a business is financial accounts form, even as the preparation of a budget, the necessary first step in the operation of what is called the "Farm Management Accounts."

Limitations of Simple Accounts. Do not let there be any misunderstanding. We may say that simple financial accounts are of very limited value as an aid to more efficient management, but this does not mean that they may not have considerable value from other points of view. For example, they may be necessary or desirable for income tax purposes, and they are certainly both necessary and desirable wherever the firm is under a salaried manager. Further, the drawing up of a statement of profits or loss on each year, or, perhaps, however simple it may be, should be regarded as a part of the management of the business. The fact remains that, although great emphasis has been placed on the importance of these and other uses of simple financial accounts, it is not the keeping of farm accounts has been viewed from the point of view of the manager which properly speaking is the business book-keeper. Again and again farmers have objected that accounts are "not history," that the summary which has happened, but they give little or no indication as to why it has happened, or how to prevent or improve on it.

For example, simple accounts will show the farmer that his milk receipts have fallen, or that his reduction in the price of milk—information which is very valuable, but which they do not show him whether his receipts are better or worse because of some alteration in the price of milk, or whether the summary obtained only by means of properly kept accounts. It may be said that the summary is enough to talk about management accounts after the fashion of a book-keeper. It is not surprising that the writer first put forward the proposal of drying young grass in a winter concentrate. The price of the common concentrates, such as molasses, is very high, and it is not surprising that the price of such a concentrate, for example, was £13 10s. per ton, and in such circumstances, the production of dried grass offered attractive possibilities. Since the price of molasses has risen considerably, it seems more than likely that the price of such a concentrate will rise still further. For this reason, it is perhaps not surprising that the future of the grass-drying process.

Without attempting to enter fully into this aspect of the question, it may be stated that if some of the driers now to be obtained under present conditions respecting the economic prospects of the position are much more favourable for small-scale practice than the position. A farmer could use a small-scale drier at certain times with his ordinary mowing machine, and at other times it could be used to dry grass which would otherwise be wasted. Further, by this means, the fresh growth of grass in the winter could be obtained and prevented from running off.

The Cambridge work emphasizes the superiority, in respect of digestibility and starch equivalent, of dried young grass over all the forms of lucerne meal and leaf-moss.

Yield Per Acre. The yield, in terms of lbs. of dry matter per acre, from permanently sown grass, is very much increased by fertilizing and cutting at monthly intervals, has been found to be under Cambridge conditions, of the same order as that from the lucerne crop. In one season, such as 3.8 tons per acre of dry-matter (assuming 10 per cent. of moisture) was obtained.

The yield, however, may be much lower in a wet, disordered season, and for this reason, grass-drying on an industrial scale should be attempted in those parts of the country where rainfall is usually sufficient to keep herbage growing actively throughout the whole season. The possibilities of the method employed by a recent grass-cutting trial at the Hannah Research Institute, Ayr, in 1932, are of interest. A yield of over 15 tons per acre of air-dry grass (10 per cent. of moisture) was obtained by cutting at bi-weekly intervals.

It is not surprising that the results of the Cambridge work have led to the suggestion of the use of artificial fertilizers in the silage of ammonia on grass land areas set aside for cutting and concentrating. Such a method of converting nitrogen into protein is well known. Such treatment leads also to an enhancement of the nutritive value of the product. A potency of the dried grass product. The nitrogen content obtained by the use of complete mineral manures together with artificial nitrogenous fertilizers is naturally related to the type of grass selected. In 1930, a good grass year, the average increase in the yield of dry-matter was 100 per cent. of the dried product distributed throughout the United Kingdom from the application of 100 lbs. of nitrogen per acre, with periods of small dressings with periods of 100 lbs. per acre. COMMEMORATION OF EMPIRE BUILDER

A Great Sailing

Excellent Reception in Parts of World

The following are outstanding features of the programmes to be broadcast by the Nairobi station next week:-

On Monday, June 17, from 9 p.m. to 9.15 p.m., a variety entertainment will include the following well-known artists: Joe Venuti and His Dixie Four, The Cafe Collette Orchestra, George Speddy Wood, The Bessie Street, Jack Buchanan, and Miss Beulah.

On Tuesday, at 9.30, Vladimir Rosing will sing "The Song of the Volga Boatmen" with his orchestra.

An article on "Hosing in the Grapophone" by Richard Hows tells us that Hosing was born in Petersburg in 1890. His father was a lawyer there. One day a grateful client said when he was packing case which contained what was should now describe as an "antidivine" gramophone.

Tragically, he is a tenor but really he is much more than that; he can sing and do anything with his voice that will produce the right tone colour for the passage he is singing. He believes more in an orchestra than a singer.

"Prince Igor" (Bosoni), Act 1 of which will be relayed to broadcast by the Nairobi station. Transmission 4 of the Empire Service, is one of the finest of Russian operas. It tells how Prince Igor of Kiev rides against the Tartar Khan (Koplen) his wife's warnings, attracting her to the care of his traitor brother-in-law, Prince Galloglav, who plans to usurp his throne. Once Igor and his son, Prince Vladimir, are gone, Galloglav's friends reclaim him for their part. World is received that Igor and his son are captives of the Tartar, where Vladimir has won the heart of the Khan's beautiful daughter, and enjoys the wild dance his savage captors perform in his honour at a feudal banquet.

you attention to Vladimir Rosing. That we are such demurely but certainly a delectable source of amusement to our listeners. Rosing, however, who had no distinction, regarding to allow his father's profession (though to this day he venomously decries the details of all great law cases) found this apparatus and the accompanying scores of the great composers, Wagner, (tenor), Mikhalov (baritone), a score of unending delight and he began to imitate their voices, which doubtless explains why his robes favoured nobles common to all three, and the fact that during his first visit, to England he offered to sing the Trovatore and "Oh With the Melody" at a Brownie Ball concert, an offer which was indignantly declined. Bernard Shaw wrote in a letter to Richard Strauss in 1911: "My excuse for writing you this letter is that I want to call

PROB recent notes it will be sign that the loudspeaker is an important part of the listener's equipment. However good the speaker may be, it is ultimately dependent on the listener's pleasure, and it is to be feared that it does not receive the care and attention which a delicate piece of apparatus deserves.

THE BRITISH BROADCASTING CORPORATION announces that it has received a number of applications for the special Jubilee programme to be broadcast throughout the world on May 27 and 28.

From these applications the Corporation has selected the following stations to participate in the Jubilee programme: B.B.C., The Netherlands, the United States, the United Kingdom, the Empire and the Colonies.

The Corporation has also received a number of applications from stations in the Empire and the Colonies, and it is hoped that many more will be received.

QUEEN VICTORIA'S JUBILEE Impressions of 48 Years Ago.

"Impressions of Queen Victoria's Jubilee" is the title of a book by G. M. D. Young, M.P., published by Methuen & Co., Ltd., London, at 6s. 6d. per volume.

The book is a collection of 48 short stories, each dealing with a different aspect of Queen Victoria's life and reign. It is a most interesting and valuable contribution to the history of the British Empire.

Power and Dignity

1935 Model "EDDYSTONE SPHINX" Receiver. An entirely new and excellent production from the Eddystone Works. This receiver employs for highly efficient valve stages, which give an ample supply of power with minimal frequency and atmospheric interference.

The designing of this state-of-the-art receiver is based upon the examination of the fine wiring of the most modern electrical engineering practice. The result is a receiver which is simple in design and easy to operate.

Mechanical troubles arise chiefly from the fact that the receiver is not a simple matter. The receiver chamber with loudspeaker is contained in a simple but dignified cabinet of modern design. For battery operation only.

TUSKER Stands Alone For QUALITY

Largest Explosives Factory Wrecked

MANY PEOPLE KILLED AND INJURED IN GERMANY

Mysterious Explosions

MACHINERY SCATTERED OVER A THREE MILES AREA

Over a hundred people are believed to have been killed as a result of an explosion in the Westphalian Amalt Explosive Works at Reinhardt, three miles from Wittenberg.

The explosion wrecked the factory which was the biggest and most modern explosives factory in Germany, employing about 19,000 people.

The first explosion, the cause of which is not yet known occurred at 3 p.m. and was followed by a fire and other explosions.

The flames of the burning workshops were visible for many miles.

Police and Storm Troopers drew a cordon round the district preventing even the relatives of the victims from entering. The Press were strictly forbidden to mention the disaster pending an official report.

THE CASUALTY LIST

A later message says that the official report of the explosion estimates that there are about 50 dead, 72 seriously injured and 300 slightly injured.

A cable from Wittenberg states that it seems that 300 people were working at the time of the explosion and 200 were accounted for after a systematic search.

Many of the inhabitants of the district fled after the first explosion and to escape the further explosion, the last of which at 8 p.m. sent bricks and parts of machinery flying over an area of three miles.

WORKING HOURS IN FACTORIES

Report on Two Shift System

[BY WIRELESS.] Rugby, June 14.

The Home Office, departmental committee recommended that the necessary machinery be put in place in 1935, which allow the employment of women and young persons of the age of 16 years and upwards in factories and workshops on the system of two shifts between the hours of 6 a.m. and 10 p.m. which should be made progressively subject to certain modifications.

The number of workers employed in the number of factories and workshops, and only 35,000 men employed under the shift system has been approved.

The view of the small numbers of workers employed under the shift system cannot be proved to show any marked effect in the number of unemployed persons; but it has, by eliminating the expansion of the British delegate, which were employed in half a dozen industries, including the electrical industry, in which the number of unemployed persons since the war, is British Wireless Service.

THE NAVAL TALKS

Every Prospect of Agreement

[BY WIRELESS.] Rugby, June 14.

The Foreign Secretary, Sir Samuel Hoare, met Herr von Ribbentrop, German naval delegation this morning and conversations with the British delegate, which were adjourned for Wednesday in June 11, were resumed later in the day. With every prospect of ultimate agreement, British Official Wireless Service.

WIRELESS NEWS

Mr. Justice Atkinson was the divorce court on Monday, in the case of Mrs. J. White vs. Charles V. White, which was decided on December 15, 1934, was made absolute.

HAIL RUINS GARDENS

Heavy Storm in Nairobi

Lightning Damage

OVER HALF INCH OF RAIN IN AN HOUR

Yesterday's torrential rain and thunder storm, that lasted for about an hour (from 1:30 p.m. to just after 2:30 p.m.) was typically tropical in its intensity.

Motorists returning to town from Ipoh found that even the main roads were running rivers in some places and deep pools in many of the earth roads. A number of cars were almost bogged on certain roads and at the top of Alversham Hill a branch from one of the tall blue gums lay more than half across the road having apparently been struck by lightning or broken off by the violence of the storm. At Hill Hotel a branch which had been broken off from a tree either by the force of the rain or the wind, crashed through the tiled roof and the ceiling of a bedroom, fortunately without injuring any one.

Halitum Havoc

A severe hailstorm also swept over the Burnley, French Mission and Westlands areas. Most of the gardens were practically stripped clean of blossoms and the half was being 'sifted' upon the ground. Kirk Road a tree was split in two by lightning and in the Hill area the rain also turned to hail, the stones being very large.

Telegraph wires were swept down at the Grosvenor Hotel and trailed across the drive. A vivid illustration of the extent to which soil erosion can take place was afforded by the amount of wash from gardens situated on slopes.

By 2.40 p.m. the rain, which had lessened considerably in intensity, had practically ceased, but in the hour or so during which it continued the fall was estimated to amount to 0.55 inches within the limits of the city. Considerable damage was done to flowers. Many gardens were visited by prospectors and the blossoms were collected—and this must have been a disappointment to some prospective exhibitors at the Flower Show to be held under the auspices of the Horticultural Society of Kenya at the Memorial Hall, Nairobi, on Monday.

BRITISH WARSHIP ASHORE

Australian Cruiser to Assist

[BY WIRELESS.] Rugby, June 14.

H.M.A.S. 'Penguin', which is coaling at Aden, has been directed to expedite her departure and to the assistance of the ship 'Hastings' which is still aground on the reef of Port Sudan. British Official Wireless Service.

THE WEATHER

The following note on the weather was received yesterday from the Director of the East African Meteorological Service: The afternoon rains yesterday were heavier than was anticipated. Rainfall recorded 0.45 inches, Elderet 0.70 ins. and Nakuru 0.77 ins. with showers all round the Lake.

Trades remain feeble and little or no rain can be expected on the Coast. Present conditions indicate that the afternoon and evening showers will continue to-day.

NO RETIRING AGE FOR JUDGES

Suggestion Scouted by Lord Chief Justice

VALUE OF EXPERIENCE

["STANDARD" CORRESPONDENT.] London, June 14.

Lord Hewart, the Lord Chief Justice, made a pungent reply to the suggestion of a retiring age for High Court judges in the course of his evidence before the Royal Commission on the Disposal of the Bench (Common Law). "I am completely averse to it."

I was made a judge at 22 and I hope to go for another 20 or 30 years," declared Lord Hewart—who is 65.

"Where in the world," he said, "is this country going to find its reservoir of learning, experience and wisdom which is to be found among the senior judges?"

AIR MAIL RATES TO BE REDUCED

["THE EAST AFRICAN STANDARD"] is officially informed that as from July 1 the air mail postage-rate from Kenya, Uganda and Tanganyika to Great Britain, Northern Ireland and the Irish Free State will be reduced from 50 cents to 40 cents per half ounce. No change will be made in respect of the rate for post cards, which is 30 cents per card.

REICHSTAG FIRE ECHO

Ernest Terpog reported to have been freed

["STANDARD" CORRESPONDENT.] Berlin, June 15.

Ernest Terpog, the Communist leader who was in prison since the Hoorsting fire in February, 1933, although he was found not guilty of participation at the subsequent trial, is reported to have been liberated.

THE LEPROSY SCOURGE

London Specialist to Work in Indian Settlement

[BY WIRELESS.] Rugby, June 14.

Dr. Robert Colborne, the young London specialist on Leprosy, is resigning the Medical Secretaryship of the British Leprosy Association and has volunteered for work in the leper settlement at Coonass, founded by the Countess of Willingdon, wife of the Viceroy of India, for a five years period of intensive research into the treatment of leprosy on the most modern lines. He will live among the patients who number 750.

His way to India Dr. Colborne will at the request of the Ceylon authorities, assist in carrying out certain plans which he outlined to them two years ago, when he was on an Empire tour of investigation.—British Official Wireless Service.

STOCK EXCHANGE

[BY WIRELESS.] Rugby, June 14.

Starting on June 14, 1934, Sterling on Paris, 74 1/8; 1916, 1917, 1918, 1919, 1920, 1921, 1922, 1923, 1924, 1925, 1926, 1927, 1928, 1929, 1930, 1931, 1932, 1933, 1934, 1935.

The firmness of home industrial was the chief feature of the stock markets. British Government stocks were dull with War Loan at 110 7/16. Gold was quoted today at 140/9.—British Official Wireless Service.

THE DEATH OF MR. JUSTICE ATKINSON

was announced yesterday.

RAILWAY LEVY

Restoration on July 1

Advisory Council's Recommendation

Colonial Service Cut Not Yet Considered

["STANDARD" CORRESPONDENT.] Durban, June 9.

Following the passing last month of the necessary legislation, the Government of Southern Rhodesia is making preparations for the holding of the first State lottery.

The first step in the organisation is the appointment of an officer to control the lottery, and an advertisement has appeared in the Southern Rhodesian papers in which the Minister of Finance invites applications for the post of "Director of State Lotteries" at an initial salary of £60 a month, subject to review after six months; when the payment of a bonus or commission will also be considered.

The First Draw

It is intended to hold four draws each year, and the first will probably take place in September. The proceeds will be held on any turf events, but numbers will be drawn on the lines of Continental State lotteries.

It is not thought that the lottery will meet great disfavor as it is particularly being urged to the expected postal and publicity has in other countries and to the fact that natives are excluded from participation.

It is understood that the question of the removal of the levy on the salaries of Government officials and employees has not yet been considered officially.

RATES OF EXCHANGE

The following rates of exchange were notified by the Nairobi Bank yesterday: London on Paris, 74 29/32; London on New York, 4.94; Bombay T.T. on London, 1/6 3/32.

ERNEST TERPOG REPORTED TO HAVE BEEN FREED

THE MAIN ROADS IN RHODESIA

New Construction Programme

Asphalt Strips

£450,000 TO BE SPENT IN THREE YEARS

["STANDARD" CORRESPONDENT.] Durban, June 9.

During the next three years the Southern Rhodesian Government will construct 1,200 miles of asphalt strips on the main roads to the territory, at a cost of £450,000. Among the first of these roads to be undertaken are the sections of the Transvaal main route from the Limpopo Bridge to Salisbury, via Fort Victoria. Work on the first 50 miles of the road from Bulawayo to the Victoria Falls is also to be started shortly.

Speaking at a public meeting, Mr. H. D. Gilmour, a former Rhodesian Cabinet Minister in charge of transport and publicity, during whose regime the experiment of laying down concrete and asphalt strips on the main roads was initiated, expressed the opinion that within a few years two-thirds of the colonial transport would run along strip roads.

WELL-KNOWN PIANIST IN KENYA

Miss Spencer Palmer to Give a Recital

TO AID E.A.W.L. FUND

["STANDARD" CORRESPONDENT.] London, June 15.

Miss Peggy Spencer Palmer, a well known English pianist and teacher of the pianoforte, is paying a short visit to her brother and sister-in-law in Nairobi, and with the spirit which is characteristic of her, is combining the pleasure of seeing her relatives and a new country, with the equal pleasure of giving her pianistic services in an excellent cause. On Thursday evening, June 27, Miss Spencer Palmer is giving a Pianoforte Recital at the Victoria Hotel in aid of the E.A.W.L. Benevolent Fund, and the maintenance of the Miss Spencer Palmer took her Licentiate at the R.A.M. London, at the age of sixteen, a remarkable achievement. She then became a member of the Fabian Society and during her student days there, was awarded the Chappell Gold Medal. She was a pupil of Vivian Langrish and Benjamin-James Dale.

The Programme

The recital programme will include works by Bach, Scarlatti, Beethoven, Brahms, Chopin and Debussy, and in conclusion a composition by Miss Spencer Palmer. There will be vocal items in addition to the piano recital, and the names of the artists will appear later.

Admission will be by programme as Shs. 2/30 each, and the recital will begin at 8.45 p.m.

All who have had the pleasure of hearing Miss Spencer Palmer play in Nairobi will wish to hear her again. She is a most gifted and competent player and a fine musician. She leaves Kenya at the beginning of next month, and the opportunity afforded by this Recital should not be missed.

ROYAL REGIMENTS

Honours for Historic Army Units

[“STANDARD” CORRESPONDENT] (London, June 4. (By Air Mail.)

Distinguished units in the Home and the Indian Armies are honoured on the occasion of the King's birthday.

The following regiments are honoured in the honours list: The Buffs (Royal East Kent Regiment), The Royal Northumberland Fusiliers.

Not so much attention is attached to the primrose of the Royal Buffs, a British regiment, Guards, since that regiment, as at present constituted, is one of the 1922 amalgamations.

Woman Soldier

The Buffs (Royal East Kent Regiment) began their existence in the service of the Duke against Spain in the 16th Century. When Charles II. formed a regiment from the survivors of this expeditionary force, they were called the Honourable Regiment, and became “The Buffs” (Continued in next column.)

TIMAU

To be Gazetted as a Township

The Commission for Local Government, Lands and Settlements (Mr. Logan) met the North Kenya District Committee at the Timau Sports Club to-day, for the purpose of explaining the difference in status between a Trading Centre and a "B" Township.

After some discussion it was decided the Committee was in favour of having Timau gazetted as a Township and that the area to be allotted for the European residential plots should be surveyed as soon as possible, after the area suggested for such a purpose, by a meeting of the North Kenya District Committee, held on May 29 had been approved by the Lands Department.

The disposal of these residential plots will probably be made by tender or allotment to whoever may apply, while the site of the plots, which were originally proposed to be from 20 to 25 acres in extent, will be reduced in area to not more than 10 acres.

DEATH AFTER QUARREL

Native Acquitted of Murder

A Mau Mau man who was yesterday acquitted, by His Honour the Chief Justice, Sir Joseph Shaurimoo, of a charge of manslaughter.

Mr. T. D. Wallace, who prosecuted, stated that Mauu was accused of killing another Mauu, Njio, at the Central Prison, on May 26. The two men with others had been at a drinking party, and there had been a quarrel, which degenerated and fell to the ground, after they got up again, Mauu struck Njio in the region of the kidney and went away. Njio was later discovered lying on the ground. He was taken to the police station where he died and a post mortem, conducted under the direction of the Kaijiko D.O. and a veterinary officer, by a native dresser, showed that the stomach was full of blood. This, said Mr. Wallace, suggested that the spleen had been ruptured following the blow to the kidney.

Evidence by eye-witnesses of the struggle was to the effect that both men were drunk, and that Njio did not seem to be badly hurt. Only one witness saw the alleged "kidney punch" while being his opinion on the position of a mark and a clot of blood underneath the skin, the native dresser considered that there had been a blow at the front of the body and not in the kidney region. His Honour remarked that the absence of medical evidence was very unsatisfactory. He agreed with the answers to the extent that he was not at all satisfied that the accused was responsible for the death of Njio. The fatal injury might have been received during the struggle on the ground, or he might have fallen after Mauu left him.

his kindness in attending the inquest and for so clearly explaining a matter which has puzzled the district for some time. The members of the Local Commission, who are in the area to discuss with the farmers the question of rents, said a visit to North Kenya to-day, and proceeded on a tour of the district with various residents.

KING AT TROOPING OF COLOUR

Glistening Spectacle at Parade

AMUSING INTERLUDE

[STANDARD'S CORRESPONDENT.] London, June 5.

The nation was greatly relieved to hear that the King had recovered from his slight chill, and was able, accompanied by his four sons, to attend the Trooping of the Colour in celebration of his seventieth birthday. There were the usual splendid scenes.

The King wore the uniform of Colonel-in-Chief of the Irish Guards—the tunic whose colour was trooped—on his robe at the head of a glittering cavalcade from Buckingham Palace to the Horse Guards Parade. He rode at walking pace, between solid ranks of his cheering people, a spare, spright figure, whose martial air belied his three score years and ten.

Bahadur rode the Prince of Wales, the Duke of York, the Duke of Gloucester and the Duke of Kent. Ladies of the Royal Family saw the ceremony from a window above the Horse Guards Arch. The Queen was with her daughter-in-law, the Duchess of York, and her grand children, Princess Elizabeth and Princess Margaret Rose. The two young Princesses plainly showed their delight at the brilliant spectacle.

At this moment a black and white terrier suddenly materialized in the middle of the parade. Along the glittering red line he ran, jauntily enough at first. No one moved. The silence remained unbroken. But the unexpected disapproval he felt about him destroyed his confidence. His step faltered. His tail began to droop. He stopped his inspection of the long red line of soldiers and turned hesitatingly towards the Horse Guards Arch, above which the Princesses sat. He was signalled to "pass along there" by an imperceptible policeman, and with his tail well between his legs he disappeared underneath the arch, while covert smiles expressed general amusement at his discomfiture.

Ceremonial Parades The King's Birthday was celebrated by ceremonial parades at various towns in Great Britain and overseas. At Shorncliffe Camp, near Folkestone, a touch of drama marked the parade. Lieut. Lt. Col. E. M. Scobie, commanding the 9th Company, Royal Engineers, left hospital to lead his men to their positions and was suffering considerable pain throughout. During rehearsal of the ceremony on Friday he was thrown by his horse and his unbalanced sword wounded his thigh. The wound has not yet healed when he took part in yesterday's parade.

At Cowes a royal salute of 21 guns was fired from the R.Y.S. Castle. CHRISTIAN SCIENCE SOCIETY NAIROBI (A Branch of the First Mother Church, The First Church of Christ, Scientist, Boston, Mass.) ### The Monetary Factor in Depression

#### CURRENCY CONTROL AND PRODUCE PRICES

To the Editor "E.A. Standard."

Sir,—I don't know whether "Lombard" is serious when he recommends authorities on banking. Marshall wrote his "Principles of Economics" in the eighties of last century—possibly about the time "Lombard's" ideas on the subject crystallized. I imagine, the American, dates from the same period, though his "Principles of Economics" did not appear until 1911. I know nothing about his other authorities, but from their dates—1918 and 1924—, I have no doubt they reflect the Gold Standard and the Bankers' system of issuing currency, and credit to the last ditch. If the question were one of making a modern electric turbo-generator function properly, instead of a banking system, no doubt we would have people like "Lombard" pointing out that James Watts was a famous authority on steam engines and Michael Faraday on electric generators, and advising a study of their works.

I am not a banker. I am an ordinary citizen who has been forced to delve to the roots of a dying economic system in an effort to find the cause of the decay. My knowledge of Banking is derived almost entirely from a close study of the report of the Macaulay Commission on Finance and Industry—sent out by reading all I could find of the works of Keynes, Irving Fisher, and Gustav Cassel. I am convinced that Lord Macaulay and his fellow Commissioners found and published the truth in their report, and that if it had been acted upon we would never have been overwhelmed by the depression that is now upon us. The English Bankers, led by the present Governor of the Bank of England, and supported by the present Chancellor of the Exchequer, have consistently refused to act on the recommendations of that Commission. The Chancellor of the Exchequer has flatly refused

every request by merchants and manufacturers for a re-examination of the subject. The fundamental principles on which the Bankers have acted as a result of the following:

1. The Price Level determines the proportion in which the wealth produced by the community is divided between producers (including workers) and consumers.

2. A high price level is unfair to the producers. Under these circumstances they get less than their due share of the wealth produced.

3. A low price level is unfair to the consumers. They get less than their due share of the wealth produced.

4. (And this is the crux of their case). The price level is controlled by the policy of the Bank of England.

5. The price level should be raised to a point which would give an equitable division of the wealth between all sections of the community, and maintained there.

6. It is the duty of all Bankers to look on as an infringement of their rights. The Bankers are reactionaries. They want low price level has nothing to do with them—all they desire is the whole wealth of their organization on their own side, that of the consumer. They claim the right to do this continuously, in the way that best suits them, and to ignore entirely the fate of the producers and workers.

"Lombard" claims that "the essential theory of value which determines the price of commodities from the demand as well as of supply." Of course I ignore those factors. But not because I am unaware of them, or have failed to study them. They don't enter into the general Price level and they can't be controlled by any known mechanism. They will blow their winds and tides. Suppose (as Cassel) you have a ship in the middle of the ocean bound for a certain port. The forces acting on the ship are the winds, the ocean currents and the navigation (including in navigation the engines propelling the ship). The captain cannot control the winds and ocean currents. But he can control the navigation—and having that controlled he and he alone is responsible for seeing the ship arrives at the correct port. His control is adequate to correct the vagaries of winds and tides and he must use it to correct these vagaries, and to the ship on a steady course.

The Bankers can control the quantity of money in circulation. They, therefore, can control the

Price Level and that is all that matters to ensure a just division of the wealth produced. If consumers don't consume, nobody will make them do so by lecturing or bestowing them. But the Central Bank can prevent the Price Level falling by printing and issuing more money. If a bad harvest leaves the whole population short of food, the Central Bank cannot make the rain fall, the sun shine. But it can restrict the money supply and prevent the Price Level going sky-high. In other words, when goods are plentiful, money must be plentiful. When goods are scarce, money must be scarce. To ensure a fair division of the wealth between all classes of the community.

But the Bankers, who print and issue legal tender money, or who create credit money by writing figures in their books, claim the right to restrict or contract the money supply at their own free will. They claim and exercise the right to restrict or contract the money supply at their own free will. They claim and exercise the right to restrict or contract the money supply at their own free will. They claim and exercise the right to restrict or contract the money supply at their own free will.

"Lombard" looks on the prosperity of 1929 as purely artificial. What was artificial about it? The motor cars were bought there. The period that drove them was real. The period that drove them was real. The period that drove them was real. The period that drove them was real.

"Lombard" looks on the prosperity of 1929 as purely artificial. What was artificial about it? The motor cars were bought there. The period that drove them was real. The period that drove them was real. The period that drove them was real. The period that drove them was real.

The principal recommendations of the Cunliffe Commission were not put into force until 1925. "Lombard" knows as well as I do that their principal recommendation was to return to the gold standard. Certainly that did not take place until 1925. But the ruinous process of restricting the money in circulation of standard gold ceased from the very day they produced their report. That was the reverse that ruined British prosperity.

"Lombard" says I give a distorted view of the Bank Rate by saying that raising the Bank Rate lowers the level of wages. It is a distorted view at all. Raising the Bank Rate stops borrowers from borrowing. That is, the amount of credit money in circulation shrinks and lowers the general price level of all commodities—labour included. That starts the vicious cycle. As wages fall, consumption falls. As consumption falls, employers lower wages or discharge workmen, and that makes consumption fall further. The only person in control is he who controls the issue of money, and if he does not exercise his control until all the producers are ruined, he may afterwards lower the bank rate to 2 per cent. for five years on condition of inducing borrowers to borrow again. It is no proof that the helm is worthless that it ceases to work after the ship is wrecked.

There is no way and only one way for Britain to control her bankers, and that is to nationalise the Bank of England, and the Joint Stock Banks and put them in control who understand what they are doing. For us here in Kenya, there is one way and only one way for ourselves from the tyranny of the banking system of Britain and that is to devalue our currency against sterling and keep the control of the rate of exchange in our own hands.

Yours etc.  
"SZYGY"  
Nairobi.  
June 11, 1935.

#### THE HOLIDAY FUND: "OLIVER CROMWELL."

To the Editor, "E.A. Standard."  
Sir,—I am very glad to see that the Prince of Wales School is doing another performance of "Oliver Cromwell."

I was very much impressed with the spirit of sincerity and realism shown by the young actors in the play, and disappointed to find what a large number of people had failed to avail themselves of the chance of seeing a most beautiful play acted in a way that was a great credit to the school.

The words were so clear and the pictures and singing so simple that there was no jarring note, nor a boring simile, and I found that I was as enjoying it myself, even a small child of seven sat enthralled right through.

I do hope the public of Nairobi will give this splendid effort all the support it deserves.

Yours etc.  
CAROLINE ANDERSON

**TEACHING AVIATION IN THE UNION**

**Scheme for University Students**

["STANDARD" CORRESPONDENT] Durban, June 9. (By Air Mail.) A movement is on foot for University students in South Africa to include all branches of the subject, both theoretical and practical. The first steps have been taken in the Western Province of the Cape. Negotiations are in progress in hand for the purchase of land at Stellenbosch for the purpose of an aerodrome, where the students of that University will receive their first lesson. Arrangements have also been made for the training of Cape Town University students at Young's Field, a spot near to the University, which is at present used as an aerodrome.

**CORRESPONDENCE**

**Nyeri Tennis Championships**

**Duncan Wins the Men's Singles**

**STUBBORN FIGHTS IN THE FINALS**

From a Correspondent.

The annual Nyeri tennis championships were played at Nyeri on June 7, 8 and 9. The entries list of excellent quality were disappointed in their number. One of the chief reasons for this being that the Nyeri Cup, at Nyeri, is now played the week before the Nyeri Tournament, and many people feel that they cannot leave home on successive week-ends. Despite this lack of numbers however, the tennis club of late nothing to be desired, all the finals being stubbornly contested.

The results of the semi-finals and finals were as follows:—  
1. Singles: Semi-finals—Duncan W.O. J. Campbell Murray; G.E. Cunningham best 2nd week, 6-2, 6-4, 6-2.  
Final—Duncan best K. Cunningham, 6-2, 6-4, 6-2.  
Ladies' Singles: Mrs. Lathbury best Mrs. Collington, 6-2, 6-4. Mrs. Dawson best Mrs. Bradler, 6-2, 6-4.  
Final—Mrs. Lathbury best Mrs. Dawson, 6-7, 6-2, 6-0.  
Men's Doubles: Semi-finals—Duncan and Allen best De Week, 6-2, 6-0, 6-2.  
Lathbury and Cunningham best Campbell-Murray and E. Cunningham, 6-4, 6-3.  
Final—Lathbury and K. Cunningham best Duncan and Allen, 6-3, 8-6, 6-4, 5-7, 6-4.  
Ladies' Doubles: Semi-finals—Mrs. Lathbury and Mrs. Bradler best Mrs. Potter and Mrs. Peel, 6-0, 6-0, 6-0. Usher and Mrs. Ford best Mrs. Dawson and Mrs. Peal, 6-0, 5-7, 6-2.  
Final—Mrs. Lathbury and Mrs. Bradler best Mrs. Usher and Mrs. Peal, 6-0, 6-4.  
Mixed Doubles: Semi-finals—Milton and Mrs. Dawson best Campbell-Murray and Mrs. Band, 6-0, 6-2, 6-1; Duncan and Mrs. Campbell-Murray best Lathbury and Mrs. Lathbury, 6-3, 6-2, 6-4.  
Final—Milton and Dawson best Duncan and Mrs. Dawson, 6-2, 6-0, 6-3.  
The best finals were the mixed Doubles and the men's doubles. In the former Milton and Mrs. Dawson won after a great struggle against Duncan and Mrs. Campbell-Murray; one of the features being Milton's net play while Mrs. Dawson was very steady. Mrs. Campbell-Murray is a much improved player.  
The men's doubles brought Lathbury and K. Cunningham against Duncan and the veteran, "Cigger" Allen. The appearance of "Cigger" (allotted in previous column).

**NAIROBI, June 12, 1924.**

The letter on the courts in "shorts" published last week and prolonged applause.

During this match 60 games were played and it was not until the fifth set that Lathbury and Cunningham were able to win by 6-4. The brilliance of Cunningham's play over hand rather than the Secretary of that body to throw some light on the matter together with answers to the questions put through the press by "Eth" and "P.N."

**Yours etc.,**  
"HIAZ."

**Royal Hunt Cup**

The acceptors for the Royal Hunt Cup are as follows:—

Wyehwood Abbot	...	9 7
Flamenco	...	9 1

**RONEODEX**

the x-ray of business

The new way for all records systems, the "candle-burn" or ledger methods, makes crystal clear facts, which, unless arranged in Roneodes, are obscure and difficult to arrive at. Amongst other advantages, Roneodes gives you perfect care every stage of your work, and enables you to see at a glance—

Cantener's Record.—You can see at once those who have not purchased from you for 6 months.

Ledger.—You can see at a glance those of your accounts which have not been settled for any particular period you wish to know.

Stock Record.—You can see at a glance—

- (a) Those goods which are not moving.
- (b) Those goods which are dangerously low.
- (c) Those which are heavily invested.

Works Record.—You can see at a glance—

- (a) Exact progress of any piece of work at any stage;
- (b) All jobs in hand or unstarted.

A unique system of automatically functioning to give you the vital facts. Call and see the Roneodes in action use at:

## Plant for Profit or Pleasure!

### PASTURES FOR PROFITS.

One of the greatest difficulties about farming at present, declared Mr. Fisher, principal of the School of Agriculture, Godea, was that persons attempted farming on too big a scale.

Mr. Fisher explained that if 20 a year were spent on fertilising each acre of grass, the value of that acre would be raised to anything between £50 and £100. The yield of milk from an acre of ordinary unfertilised acre was about 100 gallons, but at Godea 1,200 unfertilised Kikuyu, and this yield was likely to be exceeded this year. They had already shown that it was possible to do much better with a less farm properly run than with a large one that was left more or less as it was found.

Although it cost £4 annually to fertilise and improve one acre of Kikuyu grass, each an acre which improved was worth "anything up to £100." Calculating the price of milk at the low figure of 4d. per gallon, this yield gave milk of the value of £30, and if the farmer's total costs were £10 an acre, he still had a profit of £20 per acre. On fertilised land Mr. Fisher said that he had received in one year, which represented a revenue of £29 2s., as well as the value of 1,100 gallons of separated milk. The cows also gained weight on that acre.

### SAME TRUTH APPLIES TO PLANTATIONS AND GARDENS: THE EXPRESS TRANSPORT CO. NAIROBI

The largest manufacturer and distributors of cheap fertilizers in Kenya.

**NAIMURU GOLF CLUB NOTES**

Conditions for the "Stanning" Cup

**COURSE IMPROVING WITH THE RAINS**

(R.O.)  
On Wednesday last we received a deputation of experienced golfers, officials of the Kenya Golf Union, sent up by that body to inspect our course, and to decide once and for all, whether the 1935 Championship could be played at Nakuru or not.

They inspected the course from the first tee to the 19th hole; they demanded statistics of wind and weather; they examined our implements they even sampled the stuff we pass over the counter, and they pronounced themselves completely satisfied.

We have had excellent rains during the past week, and the fairways are coming along rapidly. We have still some top-dressing and patching to get through, but we have still a month ahead of us. By the time the Course receives its final break-up in July, we do not think there will be much cause for complaint. We do not expect, of course, to please everybody!

**The Stanning Cup**

On Sunday, June 30, we held our annual open event. This year, instead of playing 54 holes match-play, we are making the competition a 36 holes match.

Other sporting news will be found on page 10.

United Bogey-handicaps being limited to 18. We want this year's competition to be a record success, and we hope that as many as possible will make a point of sending in their entries.

**Eldoret vs. Nakuru**

Last week-end we enjoyed a visit from Eldoret. They arrived on the Saturday afternoon. Most all the evening and played golf on the Sunday.

They beat us when we visited them last March, so it was only fair that we should on this occasion "take off from them their boots," as the Frenchman puts it.

The results of the matches were as follows, Nakuru players being mentioned first:—

**Morning (4 Ball).**

Gray and J. Griffiths beat Langton and Adams 2/1.  
Allan and Holmes Jackson beat Pretty and Hay 2/1.  
Allechurch and Cogle beat Arnold and Parmentier.  
O. Griffiths and Ridley beat Edwards and Grant 2 up.  
Bennit and Molony lost to T. Pretty and Murray 1 down.  
Tennent and Haley beat Gouthorpe and O'Donoghue 2/1.

**Afternoon-Singles**

Gray beat Langton 6/4.  
J. Griffiths beat Pretty 4/3.  
Allan lost to Adams 3/2.  
Holmes Jackson lost to Arnold 2/1.  
Allechurch beat Hay 1 up.  
Cogle halved with Parmentier.  
O. Griffiths halved with Edwards.  
Ridley lost to Grant 3/2.  
Bennit halved with Murray.  
Molony beat T. Pretty 5/3.  
Tennent beat Gouthorpe 2/1.  
V. Haley beat O'Donoghue 2 up.

Nakuru beat Eldoret by 10 shots to 54.

**MUTHAIGA GOLF CLUB TENNIS SECTION**

The following have been chosen to represent Muthaiga Golf Club, Tennis Section, in a match vs. Kumbani at 2.30 p.m. to-day (all players are requested to be at Kumbani at 2.30 sharp): Misses Tamshali, McNamee, Gamble and Mrs. Johnson, and Messrs. G. Hanway, Kealy, Scragin and Tate.

**MAX BAER LOSSES TITLE**

Little Known Boxer's Success

**Braddock Wins on Points**

**The "Clown of the Ring"**

**FILM ACTOR AND FIGHTER**

Max Baer

**[BROOKLYN BEATS A RECORD.]**

Max Baer lost his heavy-weight boxing title this evening when he was outpointed by James Braddock, at Madison Square Garden, in the 11th round.

Braddock won the full fifteen rounds.

Baer won his championship last year when he beat the then holder, Primo Carnera, the giant Italian, by a technical knockout in the 11th round.

Since then Baer has taken part in several sensational contests, notably the one when he beat King Levinsky, of Chicago in the second round of a fight which had been announced as for four rounds only.

Since he came into the limelight as a boxing champion Baer has earned for himself the title of the "Clown of the Ring," due to his antics when in the arena. He has appeared on the films with success.

Braddock, an Irish-American, has sailed into the limelight in the matter of a few months. A little over a year ago he was practically unknown; today he is world famous, a fame that has come to him through his success over Baer.

Baer was to defend his title against Max Schmeling at Wembley in August or early September.

**"K. O. F." CLUB**

**At Lord Kitchener's Country House**

**[STANDARD CORRESPONDENT.]**  
London, June 5.

Kid Kitchener's country house, Broomie Park, between Canterbury and Folkestone, is being acquired for use as a country club for members of banks and insurance companies.

It is to be known as the "K. O. F." Country Club.

One of the principal features will be the provision, at a neighbouring woodland, of fine flying kites, for men and women members, to assist in the creation of a reserve of trained pilots.

Broomie Park, a 17th century manor, appears in many of the English-ly Legends.

**To-day's Dobbie League Match**

**Railway and Y.M.C.A.**

"May" Cup Competition to Start on Monday

This afternoon Railway are in a Dobbie League game. The kick-off is timed for 4.45 p.m. The following are the teams: Railway: Frenn—Young, Glover, Brooks, Yonall, Brierley, Halloway, Randall, Mallette, Waldgrave, G. Chapman, R. Chapman and Graham.

Y.M.C.A.: Treble; Whitefield and Little; S. Cooney, Glade (capt.), and Campbell; G. Marsh, Hutton, Marsh, Molloyhead and Davidson. Reserves: Hopper, Aitken and Grosse.

Referee: Mr. Barker. Line-man: Messrs. Thorpe and Newman.

"May" Cup

Monday, at 5 p.m. will get a start with the "May" Cup, when Civil Service are at home to the Claret in the first match in the competition. One match will be played each week in the evening. It has been left to the clubs engaged to decide. Civil Service, Civil Service, and Y.M.C.A. have entered, while there is still the possibility that Parklands will enter later.

Civil Service: Field; Toimie and Gifford; Newman, Gifford, Hutton, Peet, J. Jones, D. Noble, Poppleton and Taylor.

**HOCKEY MATCH AT PRIMARY SCHOOL**

**Kenton College Lose a Fine Game**

There was an exceptionally good hockey match at the European Primary School on Thursday when the home side, the Kenyan, defeated by two goals to one. The ground was somewhat of a handicap to Kenyan, who are accustomed to murrumb, but they had the advantage of having played in the matter of a few months. A little over a year ago he was practically unknown; today he is world famous, a fame that has come to him through his success over Baer.

Baer was to defend his title against Max Schmeling at Wembley in August or early September.

**THE SECOND DIVISION HANDICAP: 5 furlongs—Smurrot, Ashland, Boy, Courtney, Mafu, Wiley Vivian, Boy Scout, Beauclair.**

**NO NEED TO CLEAN YOUR RIFLE IF YOU ALWAYS USE**

**"22 I.C." NON-RUSTING AMMUNITION**

and what is more, your barrel will last a lifetime

★ We have had a file under test for a year. Every week an average of 2,000 rounds of "22 I.C." NON-RUSTING AMMUNITION has been fired through it. After firing 100,000 cartridges no falling off in accuracy was noted; the barrel was as clean as when new.

These facts enable us to claim that the average club rifleman shooting about 100 rounds a week can expect A LIFE OF A BARREL OF AT LEAST TWENTY YEARS IF "I.C." NON-RUSTING IS USED EXCLUSIVELY.

**ALWAYS USE "22 I.C." NON-RUSTING**
