THE BRITISH INDIA LINE

Books forward, we are connected by The Network of
Services throughout the East and to the various
ports of the British Empire in Africa and South
Africa and connecting with the principal
ports during the year. The Company is determined
to provide an even greater degree of comfort than before.

KENYA

KENYA COLONY, which lies on either side of the Equator between the Indian Ocean and Lake Victoria, has an area of about 25,000 square miles. It is a land of great contrasts, not only in climate and terrain, but in the character of its native tribes. The waterless deserts of the northern plateau; the rolling, well wooded uplands of the Aberdare Range; the meat-eating Masai savannas and the pastoral-vegetarian Kikuyus, are all found in close proximity in this romantic country.

The population is approximately 3,500,000. The resources of the Colony are mainly agricultural. Coffee, sisal, pyrethrum and tea are exported in considerable quantities. Sugar and maize are grown mostly for local consumption.

The average annual value of Kenya's external trade for the years 1935-39 was £3,000,000.

The bank has branches at Nairobi, Mombasa, Eldoret, Kitale, Kisumu and Nakuru. Those concerned with trade in Africa, the Mediterranean or the West Indies, are invited to communicate with

Company Meeting

Kavirondo Gold Mines

The Hon. A. T. J. Fraser's Review

THE ANNUAL GENERAL MEETING OF Kavirondo Gold Mines Limited, was held in London on March 19.

THE HON. A. T. J. FRASER, the Chairman, who presided, in the course of his address said:

"The directors' report summarizes the position as at the end of June, 1945, in addition to treating a small quantity of gold-bearing sands, sundry remunerative work was carried out in supplying the needs of the military and Government authorities which helped the war effort, and improved the company's resources.

Payable ore bodies of limited extent were being worked in several sections of the company's properties when mining was discontinued. Since that time the properties have been maintained on a caretaking basis. The company has some £10,000 in hand and while it was not possible to investigate other properties during the war, mineral areas in East Africa are now open for inspection and the issue of licences has been resumed.

The directors instructed the superintendent to visit and report on any areas which might prove attractive and we are shortly expecting him home. If we can recommend a property in which the company's cash resources might be advantageously invested, we will place a suggestion before you for approval. In any event, it is the Board's intention to call a further meeting of shareholders to decide future policy."

The report and accounts were passed unanimously. Mr. Sydney E. Taylor was re-elected to the board and the auditors, Messrs. Binder Hamlyn and Co., were re-appointed.

Mining

**Rhodesian Base Metal Production
Contribution to War Effort**

DURING THE PERIOD of the war Southern Rhodesia mined £17,39,670 worth of strategic base minerals, of which asbestos accounted for £8,640,832. An important new find was simpsonite (aluminum titanate), a mineral new to Rhodesia and known only once before in mineralogy. The ore containing the Rhodesian simpsonite was discovered at Mdati Mine, about 45 miles east of Fort Victoria. Over 60 tons of another rare metal, tantalum, were shipped from the Colony to the United States for use in the production of synthetic rubber. Valued at £16,389, the metal came mainly from the Bokwe area near Fort Victoria.

Two other minerals of great importance which were mined in Southern Rhodesia were scheelite and wolfram—the minerals containing tungsten—and 2,916 tons were sent to Great Britain. The principal scheelite mines are the Scheelite King (Mazoe Valley) and the Hippo chain (Sabi Valley). Scheelite is often found where gold is mined and is a valuable by-product but although these mines were in operation before the war, scheelite is not a profitable peace-time undertaking. Other mines which helped the war effort were the Gaika (Que Que) which did a good job in the preparation of scheelite concentrates, and the Maradzi (near Darwin), which devoted 10 days every month to mining scheelite although gold was a fair more paying proposition. The Colony's wolfram was mined mostly at Rhotondwa, near Wankie, and at Essexvale.

Large shipments of Rhodesian chrome also went to the Allied workshops and approximately 4,891,000 tons of a total value of £3,395,000 were exported during the war years. Coal production reached 101 million tons valued at £3,600,000 in the period 1940-45, and, of which five tons were joined in 1940, had risen to a total output of 491 tons valued at £214,736 by 1945. The Colony also produced many other metals—tin, lead, antimony, graphite, iron, nickel, mercury, copper, magnesite, barites, corundum, fluorspar, kyanite, quartzite and titanium. The total value of the country's base mineral export for the war years rose from £2,206,775 in 1940 to a peak figure of £1,433,378 in 1944, dropping to £1,444,753 in 1945.

Kavirondo Gold Mines

KAVIROND GOLD MINES, LIMITED, report that revenue for the year ended June 30, 1945, amounted to £4,799; of which £62 were absorbed by taxation and £2,601 by depreciation. The balance of £2,135 19s. 6d. was carried to the balance sheet. The capital is £375,000 in shares of £5s. each and sundry creditors appear at £6,605. On the assets side mining claims and licences stand at £179,546; buildings, plant, etc., at £18,683; stores and materials at £5,484 and sundry debtors at £5,360, while the company holds £2,000 of East Africa War Bonds and £30,664 in cash. Mining and general expenditure is shown as £26,600 and accumulated loss is £47,590. The directors are the Hon. A. T. J. Fraser (Chairman), alternate Mr. R. Nye, Mr. Frank de Gama, alternate Mr. Pryor, and Mr. Sydney E. Taylor. The secretary is Mr. C. H. D. Garland.

Copperbelt Mining Companies

The Copperbelt mining companies are not prepared to grant wage increases to their mine workers according to a joint statement issued after discussions between representatives of the Northern Rhodesia Mineworkers' Union and the Mine Managers' Committee.

50,000,000, 60,000,000, 75,000,000, 100,000,000, 125,00

Centralized Buying of Cotton

Sir Stanley Chipping, President of the Board of Trade, has made the following statement on the future arrangements for the purchase of raw cotton:

The Government have reached the conclusion that centralized purchase will be the best method by which the Government can secure its requirements of raw cotton, and that such arrangement will be in the best interests both of the spinning industry and of the cotton industry. It is unlikely that present international conditions will in any event favour the formation of a cotton futures market of pre-war type, and the Government are satisfied that centralized purchase, which has been operated successfully during the war, will in the future enable the supplies of cotton required by this country to be obtained at least as economically as by private importation and with greater certainty and regularity. It will also facilitate the maintenance of reasonable stability of price to the spinner and the operation of the measures for price stabilization of utility cloth, which are an important element in the cost of living policy.

The Government have accordingly decided to continue the central purchase of cotton by the Cotton Committee in preparation for the establishment of a permanent cotton purchasing commission working in close contact with the spinning industry. The cover scheme now operated by the control will be extended and will afford to the spinner the assurance of stable prices of cotton from the moment when he contracts to sell yarn. It will also provide closer cover in respect of particular growths of cotton than was provided by the pre-war futures market.

Dangerous Cargoes

Shipping lines serving South and East Africa have found that additional work and many delays have been caused through the failure of exporters to declare dangerous goods when lodging applications for the registration of cargo under general terms. They are therefore reminding shippers specifically of their legal obligations not to forward dangerous goods unless these are so described plainly on the outside of the containers, and their names and addresses are sent before, or at the time of despatch.

Uganda Company

THE UGANDA COMPANY, LTD., report a profit for the year ended August 31, last, of £14,424 and the directors propose a dividend of 20% less tax at 10s. per £. The issued capital consists of 225,000 ordinary shares of 10s. each, and the balance sheet shows reserves at £15,576, loans at £15,000, deflated liabilities at £11,250, and current liabilities at £75,000. On the assets side fixed assets stand at £134,127, and current assets at £192,062. The directors are Sir Theodore Gervase Chambers (Chairman), Major-General John Buckley, Wing Commander D. A. J. Buxton and Mr. Walter W. Higgin.

The 43rd annual general meeting of the company will be held at 12 noon on April 1 at 13 Rood Lane, London, E.G.

B.E.T.R.O.

Satisfactory progress is reported by the British Export Trade Research Organization, founded last year to conduct market and consumer research in all parts of the world, and to maintain a permanent trade intelligence service for the benefit of British exporters. The organization has now developed to an extent which will permit of applications for membership on a large scale.

Barclays Bank Trade Report

Barclays Bank (D.C.L.G.) reports from Nairobi on
Kenya.

Wheat, maize, and dry conditions continued

to prevail throughout the Southern Highlands.

Seasonal rains continued but

the effects were limited due to the fluctuations and disease in banana trees.

Planners have reported the crop and unoffical estimates are 3,000,000-3,000,000 bags. Deliveries to date have been

estimated to be 1,000,000 bags. Delivered to date in 1945

are 1,000,000 bags. Final figures for the 1945 crop in the Lake Province of Tanganyika are given as

Grade A 33,380 bags; Grade B 2,012 bags.

New season plantings in this area are reported as being

heavy, but rain is needed during the next few weeks if early

plantings are to become established.

Coffee. Picking in Kenya has now finished, but the final

crop figures are not yet available. There has been a con-

siderable increase in mealybug in the Eastern Area, and it is

a cause of concern to planters and the Coffee Board. New crop

prospects in the Northern Province of Tanganyika are fair

to medium provided reasonable rains fall before sowing. Labour

troubles still handicap planters.

Cereals. The gross cereal yield in Kenya under the

Production of Crops Ordinance, 1944, was 1,047,

818,359 bags prior to the introduction of the Ordinance,

1942, 1,105,942 bags; 1943, 1,594,116 bags; 1944, 1,651,260

bags; 1945, 1,981,811 bags estimated despite the failure of

the rye crop. This result is due in part to increased acreages under cultivation and to better yields per acre.

Sisal. The output for January in Tanganyika and Northern

Province amounted to 5,475 tons. The supply of labour is

still below requirements and lack of water is a further

hindrance to some producers. The cessation of exports was

restored to 3s. 6d. per ton from January 1, 1946.

Hides and Skins. Absence of shipping space has caused

large accumulations at the port of Dar es Salaam, where hides

sheep and goat skins are in plentiful supply, especially from

Somaliland, where the seasonal dhow traffic is bringing large

quantities with the N.E. Monsoon. Prices remain steady and demand is good.

Diamonds. During the past year 115,660 carats, valued at

£752,795, were exported from Tanganyika.

General. Further supplies of piece goods have arrived

during the past month and are being distributed, apart from

this business generally continues quiet.

Sisal Estates Limited

SISAL ESTATES, LTD., will hold their ninth annual general

meeting at 12 noon to-day at 10 Old Jewry, London, E.C. 2.

The profit for the year ended June 30, last, amounted to

£30,311 which, with £22,233 brought forward, makes £52,542

available for distributions. The directors recommend dividends of 6s. on both ordinary and preference shares which

will absorb £17,971 leaving £34,571 to be carried forward.

The issued capital consists of 200,000 6% redeemable

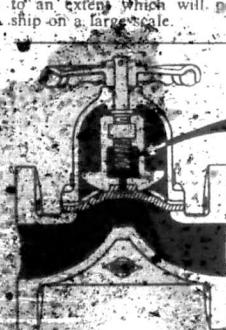

cumulative preference shares of £1 each and 1,000,000 ordinary

shares of 5s. each. The balance sheet shows current liabilities at £36,465, reserve for properties and investment in subsidiary company £100,000. On the assets side fixed assets stand at £125,132, investments at £463,316 and current assets at £31,611.

The directors are Colonel C. E. Ponsonby (Chairman), Major

R. D. S. Gurling, Mr. E. F. Hitchcock, Mr. H. G. Judd

(alternate Mr. A. A. Leigh) and Mr. S. I. E. Crouch.

IT STANDS TO REASON

No stuffing boxes - No packing!

Age-old bugbears eliminated by SAUNDERS design! Liquids no longer leak. Gases no longer leak. Products are saved and floors kept dry. FREE 40-page illustrated Handbook describes many other technical advantages. Write to-day.

NEWS ITEMS IN BRIEF

Nomination day in the Southern Rhodesian parliamentary elections is March 28.

Nyasaland Railways and the Trans-Zambezi Railways have issued a new rate-book.

A labour exchange for skilled and semi-skilled workers of all races in 34 categories has been opened in Tanganyika.

Three of four lions were killed in less than five minutes by a small party of officials near Sioma Falls, Southern Rhodesia.

Two million cubic feet of timber were exported during the war from Southern Rhodesia's private timber plantations.

After a lapse in publication during the war years, it is hoped to produce a Blue Book for Kenya for 1945 in June next.

African women training as nurses in Bulawayo Hospital did not do so well in the examinations as the male orderlies.

Native housing is first priority in Mombasa's municipal development plan. £150,000 has been allocated for the purpose.

The Government of Ethiopia has purchased from the U.S.A. six Douglas D.C.3 aircraft (which are known in this country as Dakotas).

Funds with which to build and maintain homes for elderly indigent Europeans in Kenya are being collected by the Salvation Army.

Flat dwellers in Bulawayo increased between the years 1936 and 1941 from 7% to 11% of the European population, and in Salisbury from 6% to 12%.

An electric light-bulb filled with paint thrown by a Kenya police officer at a motor-car in which a gang of African thieves was absconding, was the means by which the car was later recognized and intercepted.

The film "Raiders of the Sun" has been screened to Native audiences in Southern Rhodesia; it has now been passed for exhibition in the Colony.

A cross between a donkey and a mule has recently been born on the farm of Mr. T. J. G. H. Smith, Keiya. The foal has dimmed legs and a broken front leg.

A Muslim Welfare Association is being formed in Zanzibar with Mr. A. A. Bhaldo as President. The head of the Aga Khan's Ismailia Khoja Community.

In a total of 1,040,000 tons of coal produced by the former Government of India Office of Information production the Colony can import 1,000,000 tons at £10,000.

A record tobacco crop of 44,000,000 lbs. has been produced in Southern Rhodesia in the past year, despite unfavourable weather and shortage of labour and fertilizers.

A 1½-ton steam or Southern Rhodesian model, designed in 1937, is to be made by Sir Alexander Roderick. The cost of the car will stand between £750,000 and £1,000,000.

The town of Moyale, the frontier station on the Kenyan border of the Northern Frontier District of Kenya, never subscribed to the War Emergency Food for Britain Fund.

The London branch of the British Red Cross Women's League meets weekly in London, and the Chairman, Miss E. P. Rhodes, M.P., has spoken of the United Nations Organization.

European immigrants to Southern Rhodesia per 1,000 persons during the past 10 years have been as follows: 1933, 22.1; 1934, 24.1; 1935, 22.2; 1936, 21.1; 1937, 22.4; 1938, 26.1; 1939, 28.8; 1940, 29.1; 1941, 24.1; 1942, 25.9.

Electric power has been carried by cable through the industrial centre of Southern Rhodesia by a line laid through 58 miles of veld from Umvaniya, owned by the Electricity Supply Commission. It will shortly be extended to Grootfontein. Nine-tenths of the materials used were Rhodesian.

News of Our Advertisers

Messrs. Schweppes Ltd. have declared a dividend on ordinary shares of 10/- (same), plus a bonus of 5% (against 24%) for 1945. The dividend amounted to £132,713.

Vauxhall Motors, Ltd., report that the profit for 1945, after deduction of income tax and excess profit tax, amounted to £1,026,043, against £913,318 in the previous year. After payment of the debenture interest, provision for the sinking fund and other adjustments, the net profit was £597,327 (1,437,224). An ordinary dividend of 20% (the same) was paid, and there is a carry-forward of £2,120,955 (£2,697,628).

Among the exhibits at the Daily Herald "Modern Homes" exhibition, now being held at Dorland Hall, London, is a series of model houses erected by Messrs. Braithwaite and Co. (Engineers), Ltd., in which the use of their grid steel form system of construction is demonstrated. Although Home requirements need to be met first, it is hoped that as soon as a license can be obtained from the Government, this form of building construction will be available for export.

Fabian Colonial Bureau

The Fabian Colonial Bureau, which has been in existence since 1945, has the following address: 10, Grosvenor Gardens, London, S.W.1. It is a registered charity, and its object is "to promote the welfare of the colonies and territories of the British Empire." It is particularly devoted to "the work of education and enlightenment, the writing of historical and geographical works, the compilation of periodical articles, the editing of books, and the organization of lectures and conferences." Mr. George H. G. Smith, Chairman of the Bureau, states that "the services of many distinguished writers have been employed." Under a Secretary of State, George H. G. Smith, the Bureau's position is that it is "an independent group of trade unions and other bodies in the colonies, all of whom have also become recognized as one of the very important influences in certain countries in spreading up-to-date knowledge and enlightenment. Our members receive the best information, and there is no better way of getting up-to-date information regarding colonial affairs. This information is found to be well received by agents to the administration, politicians and the Colonial Office. We are thus often able to be very helpful to friends in the Colonies and it is a most gratifying experience to find that there is a great interest in our work among the various organizations and associations."

It is a good source of information to the public on what Government is doing in the colonies. The Bureau in Government has actually increased its membership since last year, and that, I believe, is due to the opportunities for having to do with the colonies. The Bureau receives continual visits from various visitors from the Colonies, whether they are Colonials, technicians, officials, or missionaries.

Demobilized Askari Want Work

The first idea of the African ex-Servicemen is to go home. Nearly all those to whom I have spoken wish to have a long holiday at home—anything from six months to two years—on their demobilization. This again arises the difficulty that they will have forgotten their Army trades; employers are not prepared to accept men who have lost their skills. From experience almost all who have gamed, many will return to their old trades rather than they anticipated, because they will have no money or want to leave home for other reasons. This may sound pretty grim, but in actual fact it is not quite so bad, because a large percentage of ex-Servicemen desire only to return to their old reserves."—Mr. W. R. Montagu, officer in charge of the African Central Employment Bureau, in his recent broadcast talk.

British Nationality

"By the British Nationality and Status of Aliens Act of 1943, the child born in Rhodesia before June 1, 1943, whose father is placed in exactly the same position from the point of view of his nationality and his parents' status, cannot claim British nationality for the child. It is the child born on British soil. African boys and girls born of parents other than British parents are not British subjects or Commonwealth subjects."—The Attorney-General of Rhodesia.

African Air Councils

I recently attended the Southern African Air Council. There were three Governors there, two Ministers, one High Commissioner, one air vice-marshall, and a number of other persons, important or otherwise. The meeting was supposed to be on a ministerial level. It was admirably conducted, and I came away feeling that everyone was a very important cog in the wheel, but there was nothing on the agenda that could not have been handled by one or two persons with a knowledge of the subject, at about one-tenth of the time and cost. Later I attended an *ad hoc* meeting in Nairobi at Uganda representative; it was very much more business-like. People got down to facts. Tanganyika has a very able delegate, who got a substantial reduction in the fares between Mombasa and Dar es Salaam simply by arguing. I think he was completely right. We came to the conclusion that the utmost we could expect to lose on the first year's working of East African Airways was £20,000.—M. H. R. Fraser, addressing the Uganda Legislative Council.

Control of Game in Kenya

The Chief Game Warden of Kenya, Captain A. Ritchie, in a recent article in the *East African Standard* wrote as follows:

"In Kenya, as elsewhere, the main objective of game protection is to preserve as much as possible of game, but it does not interfere with hunting activity. It has long been part of the policy of the department to reduce game on the plains and in certain mountain areas to manageable proportions, and the war-time restrictions on hunting by the British have done much in this direction. What I mean by this is that the department, in decades, I disagree that hunting should be entirely discontinued. On the contrary, I believe that there is the equal necessity, not always recognized by those who like to keep down the numbers of game in native hunting areas, to develop hunting areas. During the war much game was destroyed, especially by the widespread snaring by Italian prisoners of war, which left the unhappy legacy of a loss of our native animals instructed in this disgusting art. The greatest damage is not to native hunters or to lions, but the destruction of the grazing areas of land being opened for human habitation, and new lands for Africans from whom game animals must be killed off. While the outlook is not encouraging, I see no reason for pessimism."

Modest Sum for Ex-Army Equipment

The Government of Southern Rhodesia is spending £100,000 on the purchase of many kinds of ex-military vehicles and other equipment, for use in development work, communications and agriculture. They are buying lorries and mechanical navvies—everything for pushing forward into hitherto undeveloped country. They are buying surplus "Bailey" bridging material for making temporary bridges, which may be replaced later by permanent concrete bridges.

Colonial Tobacco Imports African Teachers' Wages

In the House of Commons last week the President of the Board of Trade stated that imports into the United Kingdom of tobacco from Southern Rhodesia in 1945 and 1945 had been 15,292,338 lb. and 20,600,195 lb. and from Nyasaland 13,504,935 lb. and 11,571,771 lb. respectively.

He added that imports from Nyasaland normally averaged about 14,000,000 lb., but that purchases had been reduced last year because manufacturers had adequate stocks of these dark tobaccos, which are mainly used in the cigarette, twist and pipe trade.

In reply to Sir John Mellor, the Secretary of State for the Colonies said that imports of tobacco from the Colonies and mandated territories in 1937 and 1938 had been as follows: Nyasaland, 13,504,000 lb. and 13,829,000 lb.; and 11,472,000 lb. in 1945; Northern Rhodesia, 229,000 lb. in 1937 and 253,000 lb. in 1938; Cyprus, 279,000 lb. and 206,000 lb.; North Borneo, 2,251,000 lb. and 4,77,000 lb.; Jamaica, 58,000 lb. and 52,000 lb.; Kenya, 4,500 lb. and 14,000 lb.; Tanganyika Territory, 9,000 lb. and 14,000 lb.; and Uganda, 14,000 lb. and 163,000 lb. Last year's imports from the Colonial Empire, apart from Nyasaland, totalled 4,78,000 lb., but the statistics of separate territories were not available. The annual production of tobacco in Nyasaland was about 20,000,000 lb., and a similar amount was produced in the rest of the Colonial Empire, much of it for local consumption. Active encouragement was given by the Secretary of State, given to the production of tobacco whenever conditions are suitable, but at the moment it was more desirable to concentrate on the production of food and other crops of greater importance.

Mr. CHURCHILL asked the Minister of Food what proportion of the imports of coffee into Great Britain was obtained from dollar countries and from the Empire, and whether any steps had been taken to increase the imports from Empire countries.

Mr. EDWARD SUMMERSKILL: Of the total quantity of coffee which my hon. friend has purchased or will purchase in 1946 for consumption in the United Kingdom 60% will

be obtained from Empire sources and the balance from producing countries which are prepared to export surplus. My right hon. friend already purchased 100,000 cwt. supplied by the London Food Council, the whole of the coffee supplied available in import from Empire sources other than India. The quantity available from India is limited by the amount of shipping space available, and we could increase imports of Empire coffee into Great Britain only at the expense of sugar and South African and Middle East countries, to whom the export of Empire coffee is restricted.

Mr. CHURCHILL asked the Secretary of State for the Colonies whether the Government in regard to the earlier question in the Kenya Highlands and whether it is proposed to ban African students away from the farms against their will.

Mr. CECIL JONES replied: I would refer the hon. member to paragraphs 3500 of Kenya Sessional Paper No. 8 of 1945 issued last November which set out the policy with regard to resident labourers in the Kenya Highlands. With regard to the second part of the Question, I would refer specifically to paragraph 347 of the paper which states that "there is no question of the compulsory removal of those labourers back to the Native areas; there is work for all to do in a great variety of occupations, and as the land is more intensively developed, there will be work for these still."

Wages Higher in Rhodesia

Mr. G. THOMAS asked the Secretary of State for the Colonies whether he is aware that teachers' wages in Southern Rhodesia are higher than in Nyasaland, and that there is consequently a tendency for unarticulated teachers in Nyasaland to work outside their own territory and what steps the Government of Nyasaland proposes to take to halt this drift.

Mr. CECIL JONES: The cost of living and consequently the general standard of wages is higher in Southern Rhodesia than in Nyasaland. I am not, however, aware that this has led to any marked migration of Nyasaland teachers to Southern Rhodesia. I am asking the Governor for a report and will communicate with my hon. friend when it has been received. I may add that the Nyasaland Government, as part of their education development plan are making increased grants towards the salaries of teachers in aided schools so as to enable these salaries to be increased.

Mr. THOMAS asked the Secretary of State what steps are being taken by the Government of Nyasaland to increase provision for the training of teachers, and in particular of women teachers.

Mr. CECIL JONES: A grant of £245,000 has been made under the Colonial Development and Welfare Fund for a five year education development plan in Nyasaland. A portion of this money is being devoted to aiding both men's and women's teacher training institutions. I am asking the Governor for a progress report on teacher training and when this has been received I will communicate with my hon. friend.

Sudden Death in Zanzibar

Mr. TURTON asked the Secretary of State for the Colonies what is the effect of the disease known as "Sudden death" on the clove trees in Zanzibar, what percentage of the trees are affected and what steps are being taken by Government otherwise to deal with this disease.

Mr. CECIL JONES: The effect of the disease is that of general wilt. Only a few days elapse from the time that the first obvious symptoms appear until the tree is dead. The estimated average annual loss of trees is about 10,000 representing just under one-fifth of 1% of the estimated clove trees in Zanzibar. Experiments on manurial and moisture requirements are being conducted by the Department of Agriculture, and in collaboration with scientists in this country the mineral nutrition aspect is being investigated. Experience shows that affected areas can be successfully replanted and large Government nurseries are maintained from which seedlings are readily available for the regeneration of these areas.

Mr. TURTON: Is the hon. Gentleman aware that many people attribute the onset of this disease to the change of Government in this country?

Mr. W. J. BROWN: Might I ask whether there is any affinity between the symptoms of this disease as read by the hon. Gentleman and the experience which happened to the Tory Party last July?

Mr. SPEAKER: I repeat the advice that I have just given about supplemental questions and the evidence of the Acting Leader of the Opposition.

Mr. SORENSEN asked whether the suggestion of the penalty of whipping for delinquent West African soldiers was preparatory to the final abolition of drastic restriction of this form of punishment.

Mr. CECIL JONES: I am not clear what my hon. friend means by the reference to the suggestion of the penalty of whipping. Reports from the military commanders in East and West Africa on the matter have recently been received and are being considered in consultation with the Secretary of State for War.

THE LONDON WALL 3535

The War

News of the Kenya Navy

The Division of War and Peace

THAT A TURTLE of four-motor launches of the Kenya Naval Volunteer Reserve, known by the name "Stanley," on March 19, 1941, under the command of Captain Stanley, son of Mr. and Mrs. Neil Stanley of Nairobi, had been lost, had been disclosed.

The vessel, built at Mombasa by the African Marine and General Stores Co. Ltd., were of the submarine chaser type, 60 ft. long and 16 ft. beam, and equipped with twin 20-mm. gun forward, two .303 caliber quick-firing machine-guns, a 20-mm. Oerlikon searchlight, and depth charges. The hull soon became a favorite hunting-ground for sharks and a smaller auxiliary.

Mr. N. Stanley, a Kenya resident of long-standing, and Mr. G. H. G. Price who has lived in the Colony since 1930, respectively, commanded and superintended the building of the hull, and installing the power, instruments and armaments. One of the boats was commanded by Captain A. Stewart, son of Colonel and Mrs. Neil Stewart. Previously the afterships were first used for smuggling Kilindini and Mombasa harbours.

Equipped by H.M.S. SPURGEON they headed for Colombo where further tactical training was undergone with 24 other units of composed Force 157 under another Kenyan Commander, Captain K. M. of Kialo, they formed part of the fleet sent to the final assault on Japan. On their way through Malacca Islands, they encountered very heavy seas and one vessel got water in the bottom. In order to get rid of any vessel failing but too be abandoned at sea, and the crew transferred to another boat, it was impossible in the darkness and bad weather to do so.

Stewart, on another M.V. "TIGER" now the damaged ship back to Trincomalee. Later a merchantman bound for that port took the damaged craft in tow.

After the surrender of Japan the tortilla assisted in the reoccupation of Penang and Singapore.

Up to the end of last year in the East Africa Colonies 2,000 Europeans, 17,000 Africans, 500 Malaysians, 100 Portuguese and 82 Asians had been released by British forces.

At present, 1,000 of the 2,000 Europeans still held in British colonies include an aggregate of the 1,200 former African servicemen, 1,000 Malayans, 100 Chinese, 100 Indians, 500 others from the industrial areas attended. All European rankers have remained to undergoes of development training and reeducation which is being carried out in local camps under the leadership of the African National Council.

At present there are 1,000 Europeans in training in Kenya, and the 1,000 Europeans who have been repatriated are about 1,000 in Calcutta. Vocational training includes the study of their war training. An exhibition of 200 exhibits, which some 2,000 Europeans, Negroes, Africans and Asians attended, was opened by a former commander Major General V. C. E. P. Exhibits included many varieties of uniforms, hats, shields and drums, furniture, lamps and lamps, and other artifacts, shoes and sandals, musical instruments, paintings, leather works, models, wireless, pictures and sign-painting. Originally intended to last for four days, the exhibition had to remain open for two extra days owing to its popularity.

On Manege, Dr. J. G. late Consulting Surgeon, East African Power, said recently:

"A more courageous body of men than the East African Troops could hardly be found. The African soldier has a courage that no danger can daunt and a willingness that no discomfort can damp. The European and the African like his cousins in Australia and New Zealand, and his compatriots the brown trout of Scotland, are accustomed to the same territories, seem to possess the same physical beauty, and stamina exceeding that of the English Army. These men were tough; and the most striking thing about them was their ability to plough through difficult fields like stretches of gravel, rocks and sand, etc."

Rhodesia Wanted a Full Empire

Speaking of Rhodesia's war efforts, Mr. Cedric S. Smith, Minister of the Colonies, the Prime Minister in a speech at Bulawayo, he said:

"We could have said that we were a small country, we could not send many men, but that is not true. We sent 15,000 men, and the people wanted a full Empire, and we came in with the rest of the Empire, but we had to see that some people remained to man our soil, and there was a country to watch the frontier, and so on."

The number of people who served in the armed forces, 10,000 Europeans (of whom 3,444 were men), 262 coloureds and 14,302 Africans, this represented 15% of the European population. owing to the distribution of our 15,000 men have not been high. Those killed or who died on service were 1,200 Europeans, 10 coloureds, and 136 Africans, and 14 were missing of these casualties 138 were in the Air Forces. Our contribution in men and power has been as great as 15% in the Empire."

From the outbreak of the war Rhodesia has spent £10,000,000 on war revenue, in addition, Rhodesia was called upon to do its share of work, and made up its quota of manpower.

At present, the land of Rhodesia, which has not been requisitioned, is to reach 10,000 men in a few months.

A New Generation of Africans

(Continued from page 74)

What is being done to bridge the gap between African and European? One of the things that struck me was how few indeed there seemed to be. From time to time perhaps do they do mixed committees for instance, and through such bodies as the British Legion, or even the schools the ex-soldiers, and I doubt if one can get very far in understanding other people's points of view without close personal relationships, and they seldom exist except perhaps among missionaries. There may be many other Europeans who, say, half a dozen educated Africans, really "well," I mean people outside their employment - well enough to talk things over with them and get to understand their point of view. But not only that, but also enough to explain to them reasonably and naturally in a technical or in plain everyday point of view. How else are they to both know? You can't bridge in built directions. And it seemed to me that not enough Europeans know little enough about the African point of view. But that African, too, is ignorant about a lot of basic facts on the European side. It's no good claiming them for that, if people begin to try to do so, and explain, and explain simply and personally in a friendly way, not in lectures or jargon, in the papers, which perhaps few of them may read, which anyway have the flavour of a debate. The basis on the African side to understand, for instance, what is played in Kenya's economy by European settlement may have embarrassing consequences - we all know that African politicians are already demanding on behalf of their people the surrender of European lands.

It did seem to me that Kenya badly needs more bridges. Perhaps partly things like discussion groups, mixed committees and joint enterprises, but above all simple personal contacts on a basis of equality between people of different races but a common interest, then

of Kenya. I know what people in Kenya are afraid to openly to do and that they are doing lots of things very well. It was interesting, for instance, to find Major Gurd, who had in his report to the Secretary mentioned that African teaching in the towns of Kenya was the best in British-occupied Africa. And he said something like So on as a substitute for the servile friendship, personal relations, I've been talking about, come the new generation of Africans up an analysis of our plans, the future, because of us will be any too bright. Undoubtedly they may seem to us difficult and ignorant and what is often quite wrongly, as a matter of fact, callous. But the feelings are at least as sensitive as ours, and every instance of what seems to them European contempt or arrogance is bound to increase their boldness and resentment.

I don't believe myself that all such are bona fide. It seems to me that obviously that they are not. I do believe in good manners. Social inequality means the things are different, so that they are necessarily superior or inferior to each other. A lump of coal is clearly black, but one shall say which is superior to the other?

Germany's Colonial Claims

Dr. Dahrendorf, who gave evidence at the Nuremberg trial last week on behalf of Goering, said that he had flown from Berlin to London on August 27, 1939, with the latest German terms, which he had discussed with the then Prime Minister, Mr. Neville Chamberlain, Lord Halifax, Sir George Wilson and Sir Alexander Cadogan. One of the six points stipulated in the agreement should be reached about German colonies while the British Government declined to discuss until Germany had been demobilized. It will thus be seen that to within a few days of the outbreak of the war the Chamberlain Government were still susceptible to German pressure on the matter of colonies.

East African Service Appointments

CARLTON K. M. STANLEY, of London, appointed an administrative officer in August, is the son of Sir Robert Gower, formerly first secretary at 10 Downing Street. Educated at Harrow School and Merton College, Oxford, he served with commando operations during the war and was mentioned in dispatches.

Dr. G. W. A. DICK, of Croydon, appointed as Entomologist to a number of villages and towns in East Africa, Uganda, and Kenya, in the year 1900.

and was trained at University College, Cork, and has had teaching experience in Law Courts, Derry, Londonderry, Belfast and Queen's U., Belfast. Mr. Hargan is said to have held examining appointments in Ireland, Scotland, Australia, New Zealand, America, Canada, South Africa, Rhodesia, and Ceylon. He is a member of the Bar of Ireland.

Mr. C. T. KING, posted to the University of Manchester by the Board of Education, has been appointed to the staff of the University High School, Manchester. Before going to the University High School, Manchester, Mr. King was a grammar school teacher at the High School, Manchester. He is the son of Mr. and Mrs. J. W. King, external student of London University, and a teacher at Bedford Training College. She has held appointments at the High Schools in Bedford and Liverpool.

McLennan studied at Aberdeen and Cambridge Universities and received a B.Sc. in Agriculture. He held a temporary appointment under the Department of Agriculture in Scotland. In 1915 he was posted to Uganda where he studied at Radley and Trinity College, Cambridge. He was awarded a Colonial Office Scholarship and graduated M.A. P.H. Jones became his supervisor and at Cambridge University.

W. J. Bradshaw of London appointed a solicitor's office in Wards Road, Chaddesden near Birstall, and from 1924 had engaged in dairy farming and rearing pedigree stock. He served in both 1914-18 and 1939-1945 wars.

Mrs. M. S. Hays of Haines appointed a district welfare officer in Cigandoo, Alaska, during the war and administrative units of the W.A.A.F. during the war and was twice mentioned in dispatches.

Mr. H. LAND, appointed an assistant engineer in the Public Works Department of Langenivka, was educated at the London Polytechnic and St. Andrews University where he took an B.Sc. He was previously a scientific officer in the experimental research department of Robert Bosch Ltd.

Miss A. C. Webster of Greenock appointed during visit in Kenya, qualified as a nurse at Knightswood Hospital as a general nurse by Royal Infirmary Edinburgh.

MISS MARY ANN WALTERS is a member of the
National Honor Societies at the
University of Michigan and the Michigan
State University. She is a member of the Michigan
and National Honors Societies.

Mrs. A. C. M. McROBBIE involved in a nursing
service in Canada by the State-registered nurse and
Christian woman. She has held appointments in
Newton, Weymouth, and in Scotland.

King of Southall, Middlesex, who himself
was in Paganayika was trained at Queen
House and King's College Hospital,
under the skill and experience of the famous Dr.
WILLIAM

Dear Readers—on the Sudden

The Government's industrialisation programme in 1944-5
and 1945-6 was prepared by the Minister of
Supply, Mr. Beaufort, Governor of the Bank of
Canada. Two details of the Assumption were
noted and well copied from the navy. The
brought up with the additional force in 1943
with special regard which enables them to sail
by wind, we built two ships later in 1943 at the
American Dockyard. In the course of the
year they carried weights equivalent to 600,000
tonnes; and by the end of 1944 there was a fleet of
such boats with a total tonnage of 301 tons. The
capital cost of Government was \$100,000, of which
\$1900 was expected to be recovered by the end of
1945, representing working profits. The cargo carried
amounted to 600,000 ton-miles. The crew of each boat
draws half the freight after the deduction of expenses
and a small messe, spars and rigging. Only
manufactures have been used in the construction.
In
the
assumption
there
are
no
available
resources
in
the
country
to
support
the
construction
of
such
large
ships
as
the
Assumption.

Director of Colonial Survey

Hodgson, M. Horne, Director of Boundary Survey in the War Office since 1911, has been appointed Director of Colonial Geodesy. His "Colonial African Survey," in which Captain Horne will be the new general organization for topographical and scientific survey throughout the Colonial Empire, news of his intended establishment of which organization was first published by **EAST AFRICA AND RHODESIA**. Brigadier Horne, who was commissioned in the Army in 1911, has done survey work in many countries and has commanded Dominion and Colonial survey departments in East Africa and the Middle East.

Colonial Grants

Grants and bursaries to the Colonies made last month for development, welfare and research schemes totalled £707,493, which included an interest free loan of £25,000 to Kenya for African accommodation in urban areas. Amongst these grants were £100,000 for experimental work on the soils of East Africa, £100,000 for the Ceylon Experimental Station and £100,000 for a permanent organization to research into hot climate diseases.

Kennzeichnung: **Fliegend**

The Foreign Office, in its despatch to the Secretary of State, states that the public there were at first inclined to finalisation—the statement by Mr. G. H. Grey, the Under-Secretary of State for the Colonies, defining the Government's policy towards European settlement in the Colony.

Scarcity of Pilots

East African Airways Corporation is suffering from a acute shortage of pilots, and communication in East Africa may be seriously disrupted in consequence. The London-Singapore service, which was due to start on February 28, has had to be cancelled.

PERSONALIA

A son has been born in Nairobi to Major and Mrs. J. H. TYLER.

SIR ELLIS POLE has resigned from the Central Housing Advisory Committee.

MR. J. ARKELL is president of the Photographic Society in Khartoum.

MR. A. R. RAMSAY of Canterbury will be leaving the country for Kenya shortly.

LIEUT.-COLONEL G. J. HUMETRIES has been appointed Deputy Director of Colonial Surveys.

A daughter has been born to Mr. and Mrs. G. K. DONALD in Salisbury, Southern Rhodesia.

MR. R. W. C. BAKER BEALL, Financial Secretary of Zanzibar is now on leave in this country.

MR. D. HAWKESWORTH is being promoted Deputy Governor of the Gezira area in the Sudan.

MR. L. W. HARRIS, District Engineer is at his residence in Khartoum at present on his annual leave.

MR. A. GELMAN, a member of the Gold Storage Commission of Southern Rhodesia and its General manager has resigned.

MISS G. HAMPEL of the Church Missionary Society Station at Kiematinde, Tanzania Territory is spending her leave in New South Wales.

LIEUT.-COLONEL R. G. SWAIN has been appointed Chairman of the Central Commodity Distribution Board of Kenya; vice Mr. E. V. Lord.

The Executive Council of the Imperial Agricultural Bank has elected Miss G. H. ROBERTSON, the representative of Canada.

MR. J. P. KENNEDY, Acting Information Officer in Uganda has arrived on his country on leave and is staying at Herisdale Haugh of the Castle Douglas, Scotland.

SIR PATRICK ABERCROMBIE, the architect and town planner has left by air for Addis Ababa and Africa. He is to advise the Emperor of Ethiopia on the re-building of his capital.

MARSHAL DOUGAIS DOUGLAS, of the Highland Light Infantry, for many years an officer in the King's African Rifles, has just left a hospital in Germany to join the Somaliland Scouts as second-in-command.

DR. A. BARRETT, the Archishop of York arrived in Khartoum last week and preached at a united service in All Saints' Cathedral. Representatives of the Armenian and Coptic Churches took part.

SIR WILFRID WOODS, who is now engaged on a survey in East Africa, said in Dar es Salaam yesterday that he would remain until he had completed his report which he hoped to do by the middle of June.

BRIG.-GENERAL SIR HENRY POWELL, who was Chief of Staff to the Supreme Commander, S.E.A.C. has been appointed Deputy Chief Commissioner of the No. 100 Ambulance Brigade in this country.

THE REV. H. ST. JOHN EVANS, Rector, who has written a history of the Anglican Church of Southern Rhodesia, was for three years chaplain to both European and Native regiments in various parts of the Colony.

MR. ERIC STEIN, general manager of the Anglo-African Mutual Trading Co. Ltd. has left by air on business visit to most of the African territories.

He is to be away for between four and six months.

CAPTAIN CASPARIOS, a former R.A.F.C. pilot and Kenya resident with a distinguished record of 17,000 hours flying, is soon to visit Great Britain and the United States to see what small single-engined aircraft suitable for an air taxi service are available.

No engagement is announced between CAPTAIN FREDERICK HORNBY, the famous aviator and of Edinburgh, and Countess DELLA GROSE, his wife. Gare, with whom he resided, and Mrs. G. G. COLES, only daughter of Mr. and Mrs. George COLES of Tunton Court, Maidstone,

Mr. A. Horne, Coldstream Guards, and Mrs. J. E. MacCormac have announced their engagement. Mr. Horne is the son of the late Sir Allan Horne, at one time chairman of the Mombasa Investment Trust and a director of Pakauerai Prospecting and Development Co.

The British Sudan officials who are retiring shortly include: MR. R. M. CUMMINS, port manager, MR. TOWMY, superintendent of the Central Prison, MR. H. INGRAM of the P.W.D., MR. R. G. CHAMBERS, manager of railways, and MR. W. R. CHRISTIAN, superintendent of Customs.

Examinations at the Kitchener School of Medicine in Khartoum have been held under the supervision of BRIG.-GEN. NEAR-ADmiral R. G. WAKELEY, Senior Consulting Surgeon of the Royal Navy. Among the examinees was BRIGADIER N. S. PLUMMER, consulting physician to the Middle East Forces.

The Central Communications Committee, which has replaced the Central Roads Advisory Committee in Northern Rhodesia, is composed of the Chief Secretary, Chairman, the Joint Adviser on Development, the Director of Public Works, LIEUT.-COLONEL SIR STEWART GORE-BROWNE, MR. T. S. PAGE, and MAJOR H. K. McKEE.

Among the sheriffs recently appointed for the counties of England and Wales were SIR CRAWFORD CURRIE, Chairman of the British India Line, for Buckinghamshire; SIR PATRICK ASHLEY COOPER, who was a member of the Rhodesia-Nyasaland Royal Commission of 1938, for Herefordshire; and MR. C. E. COBBOLD, who visited Rhodesia and East Africa some months ago, for the County of London.

The engagement is announced between MR. PHILIP DESMOND BULKELEY-WISE, son of the late George MacDonald Wise of Bombay, India, and of Mrs. Wise of Abbeylands, Wiverton, Sussex, and MISS MARGARET FINDLAY, second daughter of the late MR. Findlay and Mrs. Findlay, of Kiambu, Kenya Colony.

MRS. A. L. BUTLER and LIEUT.-COLONEL H. C. HICKLING, members of the Colonial Employers' Federation, have been appointed to the Colonial Labour Advisory Council of which Mr. A. Czech Jones is Chairman. The Federation covers mining and commercial interests in Northern Rhodesia. Replies to the printed circular from the East African territories have not yet been received.

MR. L. SILBERMAN, sociologist of Witwatersrand University, who recently visited Kenya in a team of three to advise on town planning in Nairobi and Mombasa, has recently arrived in England. Mr. Silberman has travelled extensively in Africa, having toured the Belgian Congo for the Bantu Welfare Trust and the French Congo at the invitation of the French Government. In 1944-45 he was employed by East Africa Command on publicity work in East Africa and the Sudan. Prior to his departure from Kenya he advised the Government on minimum wage legislation, and in Mombasa gave evidence in the cost-of-living inquiry. He returned to this country via Ethiopia, British Somaliland, Eritrea, the Sudan and Egypt at the invitation of the Ministry of Information.

LIEUT.-COLONEL A. L. DE B. WILMOT, youngest son of the late MR. A. de B. Wilholt of Shoreham, Kent, and of Mrs. Wilholt, and Miss A. E. STANLEY-SMITH, younger daughter of Dr. and Mrs. Stanley-Smith of Ruanda, have announced their engagement. Lieut.-Colonel Wilholt is a member of the Colonial administrative service and was in Northern Rhodesia until he joined the Forces in 1939. As cipher officer to the 11th (Y.E.A.) Division until the end of the Ethiopian campaign, he transferred to the Occupied Enemy Territories Administration and was for several months on a lonely station in Lecharali. Later he was posted to British Somaliland, where, with the exception of a few months at headquarters in Nairobi, he served until he came to this country on leave. At the time of his departure he was Secretary of the Government.

TO THE NEWS

Opinion Epitomized. "Much encouragement would be given to British industry if all overtime pay were exempt from income tax." — Sir Miles Thomas.

"The father of one of our ambassadors at Addis Ababa is an engine driver." — Mr. A. Eden.

"A good deal of dirty work comes the way of many of us—washing up for instance." — Marquess of Londonderry.

"The Hospitals scheme sprang from Mr. Bevan's blind faith in the voluntary principle." — Mr. Henry Brooke.

"The Government should give Great Britain more cheer and less chance." — Heavy taxation is killing adventure and work." — Lord Woolton.

"Two ships have arrived in Australia from England, one full of meat extracts, and the other with 70,000 cases of herrings." — Mr. Alan Minterhead.

The House of Commons is to-day largely composed, with notable exceptions, of young and inexperienced members. It is in the House of Lords that there is to be found Parliamentary experience and statesmanship." — Lord Chesham.

"Up to the end of January the value of Government-owned surplus stores disposed of in the United Kingdom amounted to about £1,000,000." — *Times*.

"A sum of £82,600,000 was remitted to the United States in payment for American films between September 3, 1939 and January 31, 1946." — Mr. H. Dalton, Chancellor of the Exchequer.

"Cunningham, Alexander, Montgomery, and Tedder, at the end of their careers will be little better off than recently elected M.P.s. They are to get half-pay which after income tax, will amount to less than £1,150 a year." — Lord Croft, Under-Secretary for War.

A sense of frustration hangs over industry like a sea fog. Where are the houses that Crabb was to build in a fortnight? Where are the queues? Where is the increase of food? Every day the irritation grows, and so that we get somerous appeals for patience and consistency. This was not the theme of the election. Then it was Utopia round the corner." — Mr. Harold Macmillan, M.P.

It is estimated that about 300,000 working days have been lost during January and February, 1946, in stoppages of work arising from industrial disputes. The number of working days lost in the coal mining industry is estimated at about 70,000. — Minister of Labour.

We can attribute the evils in world to-day to two causes—a decline in the belief in God and a watering down of His teachings; and secondly, rejection of the moral standards by which our lives and relations with our fellows should be directed." — Cardinal Bernard Griffin, Archbishop of Westminster.

In the U.S.A. throughout 15 years there were 11,234 murders—308 a day, 375,672 robberies and burglaries, 241,491 car thefts, 1,000,000 breakages, and 11,531 assassinations. Goods stolen were worth £17,640,000. New York has the worst city murder rate with a total of 1,222. Chicago 213. — F.B.I.

There is a story, probably apocryphal, that a civilian scientist was flying across America to lecture to a technical audience on his War speciality. At a stop en route he took his place on the plane in favour of an officer who held a higher priority. The officer, who was going to the same lecture as a member of the audience, protested but the Future of the War was more important.

Unskilled Human Capitalists. Asked why England was not invaded in 1940, a German general explained that the Germans did not like to risk what the British Navy could do. A thousand years of naval tradition paid off in the end—for what the Navy could do fact have done was demonstrated at Crete next spring. Even assuming that the metropolitan R.A.F. could have given some air cover to the Channel if it could not do in Crete, there can be little doubt that a resolute attack would have effected a landing, that a landing could have been met only by a most evolved but wholly inadequate defence, and that by an expenditure of a few hundred thousand men at the outset the war in the west could have been won. Even supposing that things had gone wrong, no adequate reason has ever been given why a competent military machine should not have risked it. The German generals now admit that the overall politico-military strategy of the war was "contemptible," but of course they put all the blame on Hitler from the cardinal error of attacking Russia to the final futility of Rundstedt's offensive in the Ardennes in December 1944. But surely competent soldiers are more than "yes-men." Some German generals undoubtedly were. On the whole the German General Staff (50,000 strong) showed a lack of strategic inspiration which even Hitler's position does not excuse. General Marshall, reporting to the American Secretary for War, says, "no General Staff objection was expressed when Hitler made the fatal decision to invade Soviet Russia." The next outstanding strategic blunder of the German military machine was the heavy reinforcement of Tunisia after Alamein and the Anglo-American landings in French North Africa had made the German position south of the Mediterranean hopeless. When the German soldier thinks he is beaten—and he is not exceptionally maimed from this impression—he surrenders readily. The ratio of German prisoners taken before the final surrender to German casualties was extremely high. The German Army was eviscerated by surrenders rather than by losses in the field. As permanent casualties killed or too severely sick or wounded to serve again seem to have been under 6 million in rather less than six years of war, as compared with 61 million in 1914-18. That is not a crippling rate for a nation with an annual intake of about 300,000. The Germans are good military technicians and more often than not brave soldiers. But they are not perfect technicians or "superhumanly" brave soldiers. They are not either in the military or technological sense a "master race,"

BACKGROUND

BY THE PRIME MINISTER

We shall require discipline from the workers—particularly that highest form of discipline—self-discipline. But we shall also require the right kind of leadership in the management. We cannot afford to waste our strength in quarrels over wages, hours and conditions. We cannot afford stoppages in industry. We want the industrial machine to move forward with a steady rhythm. This requires qualities on both sides. Having set up this machinery, let us not fail to use it. The most efficient industries in this country are those where there is a mutual trust between the employer and employee alike. We must realize that what is at stake is our standard of life, and we cannot afford unnecessary stoppages in our work. The whole of our plans for education, a national health service, social security, and a fuller life for all depend ultimately on the level of productivity in this country. These benefits in which we want all our people to share, can only come from one source, and that is from the work of our men and women applied to our natural resources. It is for us to show that the British way of life, with its freedom and democracy, with its kindness and with its acceptance of the moral values on which alone true civilization can be founded, can in peace as in war be an example to the whole world." Mr. Attlee, the Prime Minister.

Nuremberg Trial. What Germany thinks is of paramount importance, and what Germany may now very legitimately think, after we have elevated her leading *banditti* to the honour of the political dock, is that in that dock they stood for Germany *contra mundum*, with a doom ever-hanging them that will now be regarded as much death for their country as death in battle ever was. To the Germans the Nuremberg trial can now appear only as a prolongation of the war and the accused the last of the fighting line. That there could hardly be greater travesty of the facts will not matter. Facts do not count much in a nation's emotional crisis, and the argument that now emerges from the course the trial has taken is the most crushing of all in favour of its critics. Instead of wreaking speedy justice on guilty men, it has created in Germany an emotional crisis in which the nation stays to bless the men whom it ought to curse as the first and only authors of a ruin such as has not overtaken a State for generations." *Time and Tide*.

Liverpool Cotton Market. The Government's decision that the Liverpool cotton market is never to be reopened is a very serious matter. The fact that England has been the world market has automatically brought business to British bankers, shipowners, underwriters, and, indeed, to every component world of commerce and finance. In conjunction these activities have earned for us a sizeable income from overseas at the cost of relatively small expenditure of human power. We may be quite sure that New York will hasten to fill the gap left by the disappearance of the Liverpool market. It is almost inconceivable that at a time when the Government is asking the British nation to go short of goods in order to expand exports, it should want only to destroy this source of income. It is in effect refusing to sacrifice any of its principles at the very moment when it is asking the public to forego many of its comforts. In pronouncing the death sentence on the Liverpool cotton market Sir Catto Cripps said that this was not necessarily a precedent for Britain's great markets. But in Leeds, there are fears as to the future of the Bradford Wool Exchange and, in this danger that Ministers will forget that what is the right course for cotton is the right course for wool, and come to that, for rubber, for ferrous metals, and all other commodities. A delicate trading organization is being smashed for the sake of a political principle. The centralization of purchasing need not necessarily mean price stability. Even the British Government cannot control world economic trends or force an overseas grower to accept a particular price. Fluctuations in world prices and in supply and demand will occur in the future, and all that will happen is that the Government purchasing agency will have to assume the speculator's function of taking up the slack. How much this may cost the taxpayer is a subject for speculation. One thing which is likely is that from time to time there will be sudden and big changes in the prices at which the Government agency sells to Lancashire spinners. This may be even more unsettling than the continuous but usually narrow fluctuations which occurred on the Liverpool Exchange in the past. *Sunday Times*.

The House of Commons while the House of Lords sleeps. The usual attendance in this House is about 80 though its full number is 642. Like the sober and temperate Viscount Samuel,

Joseph Evans

COGENS

another aim is that they should meet some basic need which could be produced by private capital without leaving a monopoly to such the Governmental monopoly. Iron and steel, the cold storage of meat, cotton, flour-milling and spinning, electricity and sugar have been developed on these lines, and are supplied at a cost which makes neither profit nor loss, thus making possible the development of secondary industries. The result of this policy is that there are now over 500 of these industries, large and small.

The War.—At first a few members of Southern Rhodesia's fighting men are now back, but only a few can afford to give their time to politics. In a new country a man must first establish himself, and we have no learned class. The United Party has never even seven candidates with Service records, of whom two resigned their seats in Parliament in order to go to the war, and out of the 30 seats which have to be contested, we have new candidates, including these servicemen. Ten young members of whom the Prime Minister and three of the present Cabinet make four, are competing for old seats, while among the new candidates, there are a majority of younger men, most of them being in their thirties of early forties; they form a good cross-section of the population—a strong contingent of farmers, at least two connected with mining, several business men, more business men, and one doctor and a former minister. One woman has been nominated, Mrs. Rosina White, a prominent surgeon and ex-chairman of the Women's Institute and an active social worker.

The Issues.—The main issue is between Socialism and the modified individualism of the United Party. So far the latter have not enough candidates in the field to form a Government, nor have they much chance of success in some of the constituencies, but if they divide the non-Socialist vote they may cause a stalemate, in which case the Prime Minister has said that he would return to the country again, for the chances of re-election are poor.

There is a difference of degree which almost amounts to principle, both in the financial and Native policies which divide the Liberal and United ranks. The Labour Party has always observed neutrality in party policies over the Native question, but the Liberal Party has raised it, and while it is not clear what they actually mean, they are definitely in favour of a much more complete segregation than is envisaged in the Land Apportionment Act and the Morris Carter Report, which have always been the basis of the Native policy of the United Party. The shortage of Native labour is a subject which makes many electors prepared to vote for anyone who can suggest a remedy, but there is only one solution—by education in the schools, in the reserves, and on the farms to make the African a more efficient citizen and labour unit, and by health measures to improve his physical condition. The United Party Government has been pursuing both these ends, and is also planning to economize labour by mechanization, and private employers must do the same.

Other burning questions are mining, also, housing and social security. Every party makes promises as to these, but the practical means have still to be worked out.

This, then, is the background of the Southern Rhodesian election of 1946.

Yours faithfully,

SALISBURY, Southern Rhodesia.

TAWSE JOLIE

Mrs. Tawse Jolie was the first woman M.P. to be elected in Southern Rhodesia. She sat in the Assembly from 1920 to 1927.

Points from Letters

I congratulate you on your new position which I consider to be a definite improvement. It will enhance the reputation of Africa, has always been a well-planned periodical.

Outlook for Maize in Kenya

Price Guarantee Essential to Production

By THE EDITOR OF EAST AFRICA AND RHODESIA

IN A recent column recently written in your columns that unless higher prices were guaranteed in Kenya for maize there would be a shortage in the future. We then asked that the Government of Southern Rhodesia, by far more active than ours, had those of the north to do the same. The north has guaranteed £50 per bag for maize for home consumption during the next five years, and is now paying £2 per bag for early deliveries, and £1 per bag for ration supplies. The East African territories have not yet decided their position, and ask the same questions: (a) why Africans and Europeans planted maize in Kenya in the past 25 years? and (b) whether they are likely to sustain production in the future?

Africans planted maize because it was their food, because the balance was readily saleable, and because for many there was no alternative money crop. It would be optimistic to answer the second question in the affirmative. In the first place cultivation of very steep slopes will be prohibited, and part of the ordinary maize lands will be put down to grass or green manured. That will mean that the acreage of maize will tend to decrease, and though it may lead to improvement later on, it will not help present production; nor is it certain that the restored land will be planted to maize. Agricultural officers will certainly be urged to persuade natives, once their food supply is assured, to grow the best paying crop they can on the balance of their land, and it is most improbable that this will be maize at export values.

Europeans planted maize in the past because when the great period of settlement in the Kenya Highlands was starting, and when the Box market had failed, it was about the only proved crop in many districts, it required little in the way of extra plant or machinery, and that was a considerable bonus, who were under-capitalized as most of them were, and to others who had lost money in Box. It must be borne in mind that at that time there was no rust-resistant wheat, dairying was a dangerous line owing to the prevalence of east coast fever, there was no pyrethrum, no co-operative creamery, no co-operative bacon factory, no passion fruit, no vegetable canning, no Land Bank, and no hope of a loan at less than 8%. It would surely be idle to suggest that all these factors can be ignored. Unskilled labour may have been more plentiful and skilled labour less common, but that is merely another factor which made maize-growing more attractive than it will be in the future.

Farmers seemed slow to avail themselves of these fruits of progress. It was because, owing to the slump, it was as much as they could do to keep going. A change-over costs, money which they could not afford. Some did less, such progress was made; during the last years, and it would be most dangerous to assume that all new settlers will base their operations on maize, or that old settlers with war-time profits in their pockets are likely to produce much maize for sale.

The probability, indeed, is that unless a price greatly in excess of export values is guaranteed over a period of years, plantation and industrial enterprises in the Colony may find themselves short of rations. Maize requires large gangs of unskilled labour for cleaning and harvesting; wheat and dairy need only a comparatively few men, most of whom would be paid at skilled or semi-skilled rates. It must surely be a matter of great importance to ascertain at what price an adequate supply of maize can be assured.

Your faithfully,

Mixed Farmer

Letters to the Editor

Frankel Report on Gold Industry Confidential to Sir Edmund Teale

To the Editor of EAST AFRICA AND RHODESIA

SIR—A confidential report of the Frankel Committee has come into the mining industry of Southern Rhodesia to note vital questions of mining policy.

This well-documented and forcitive report makes criticism of mining policy, particularly in relation to taxation as affecting progress and development, is most important, and should also be considered most closely by all interested in East African mining, while many of the conditions and factors are, in many respects, similar to those in Southern Rhodesia.

The report shows very clearly how the policy adopted not only was expedient in war-time, but also was pre-arranged that period, was both timely and wholly inequitable in its application to individual mining interests, and was unfair also in its treatment compared with other less hazardous enterprises in the country.

The recommendations in the report may be considered drastic by Treasury authorities, but the evidence brought forward and the arguments advanced in favour of unpriced or eliminated taxation show the serious consequences that may be expected by shrinking this issue involved.

The importance of maintaining, and if possible expanding, gold production is not only of immediate importance to the economic welfare and progress of the Colony concerned, but has a wider Imperial aspect at the present time.

The report reveals, among many other things, the way in which valuable mineral resources may be wasted or their truly development thwarted by an ill-advised mining policy. It may also come as a surprise to many who have hitherto looked to the example of Southern Rhodesia as worthy of emulation in the lead given by technical and scientific services designed to assist the mining industry. It is evident, however, that such assistance can be of no avail if neutralized by a mining policy (including unwise and inequitable taxation) which tends to defeat or discourage the enterprise.

It is to be hoped that not only will Southern Rhodesia benefit from the advice given in this report, but that East African authorities will likewise take note of it, and carefully review their own policies in the light of this experience.

Yours faithfully,

Pirbright

E.O. TEALE

Kenya's Official War Record

Compiler's Request for Assistance

To the Editor of EAST AFRICA AND RHODESIA

SIR—A record of Kenya's war effort is being made by the Kenya Government, for the Imperial War Museum, London. In connexion with this I am anxious to obtain information of Kenya men and women who are serving or have served with His Majesty's Forces.

While East Africa Command can help, they cannot give any complete figures, especially for those who have served overseas or in the Air Force, or Navy. I am therefore dependent on the response of the public, and while there have been numerous replies to the original appeal in the Press, there are still many names to be collected. Might I ask your readers to help by sending particulars of the war service of themselves, their families and friends?

The information needed is the name in full, date of birth, regiment or other unit, dates of service and ranks held, honours and awards, and particulars of the connexion with Kenya.

This is Kenya's war record, which, judging by the preliminary figures, is already something of which to be proud. It is up to Kenyans to make it more complete, and thus pay fitting tribute not only to those who have served and survived, but also to the large number who have given their lives on all fronts in this war.

Now is also the time to send any souvenirs which readers may have from their war service. Christmas presents should be sent to the War Memorials Committee, in whose care the First World War Memorial of the Kenya Government Camp lies. Some of these trophies will be used to form part of a representative collection which will be shown in Kenya for exhibition. A permanent museum of this type is one of the suggestions for Kenya's war memorial.

Your help in these matters will be greatly appreciated.

Yours truly,

O.L.G. BARTON-THOMAS

5. Rhodesia's General Election

Mrs. Fawcett's Note on the Background

To the Editor of EAST AFRICA AND RHODESIA

SIR—Southern Rhodesia goes to the polls in April to elect her sixth Parliament.

There will be four parties in the field: (1) the United Party, which has held office since 1933; under Sir Godfrey Huggins; (2) a new party, calling itself Liberal, whose head is Mr. Smith, who was Minister of Finance in the present Government until he resigned in 1942 because he disagreed with the policy of meeting war expenses out of revenue and creating a surplus as a reserve; and (3) and (4) the Labour Party, which goes to the poll as two parties, having split during the war when some preferred to retain their identity and others agreed to accept office in the Government in order to assist with the war effort.

An attempt to heal the breach before the election was nearly successful, but ended in a split over the question of the admission of Africans to the party organisation. All the Parliamentary members but two (out of six) have followed a new leader, Colonel Walker, leaving the Leader of the party and the Opposition to head the section who remained faithful to him. Although they secured only six seats in the last election, Labour polled a very considerable proportion of votes, and as the tendency to the Left everywhere has certainly affected Southern Rhodesia, their chances of forming a majority would not have been at all negligible but for a deep division in their ranks. Both Left and less Socialist principles—which are difficult to reconcile with conditions in a country with a black proletariat.

The United Party and the Liberals. The country as a whole does not favour Socialist experiments, as is evidenced by the successes of the present Labour leader, Colonel Walker, that they do not intend nationalizing on a big scale—only key industries. But the United Party, which might, on its score, have expected a fairly easy passage, has to meet the continual unpopularity of a Government which has been in office without an election for seven years, has had to impose stringent restrictions owing to the war and has had little time to devote to propaganda.

The Liberal Party, which was founded three years ago, has had to meet some of these drawbacks, but it has had difficulty in establishing a claim to an original party, since most of the objects it has set forth are the same as those of the United Party. Standing for collective finance and for individualism, the Liberals oppose the United Party, which accepts the necessity of a form of State enterprise in public interests of benefit to the community.

The guiding principle in setting up these public utilities, which are in the form of commissions, is that by Government but run by a body of men chosen

the development of Rhodesia in co-operation with the United Nations Organization. This would be the first step in the creation of a new African state. The British Empire and the Commonwealth are not the only ones who have been instrumental in the formation of Rhodesia. The United States, Canada, Australia, New Zealand, South Africa, and India have all played a role in the formation of Rhodesia. The British Union can undoubtedly be relied upon to help to preserve the peace. Some of the colonies have been told to do so. Some of the colonies have been told to do so. Let us make up our minds what we think the answer ought to be. How would you like it to be? We have made up our minds to accept the answer.

A New Generation of Africans in Kenya Need in Bridges Between Races

AFTER BRITISH ACTS in Kenya, I wanted to know how Kenya had changed since the days of the Mau Mau. I had a long evening's talk going to be even longer, and said a bit about the people. I couldn't help feeling a lot of admiration for the way people have carried on during the long war years. They've all had very little rest or relaxation, come off from Europe, and coped with all sorts of difficulties and irritation without any of the home leadership used to be considered essential to stop people going back from the life-style.

Burke's above France, only Europeans when one talks about the people of Kenya. There are far more brown people and black people, and they belong equal to Kenya. And I think it was among the African people that I noticed the greatest changes.

Reduced Output of Native Labour

I don't pretend to be able to sum it up, but in three months' visit to 15 white people living on farms, the most obvious changes among Africans are that I'm afraid rather irritating, not to say discouraging. I heard complaints from all sides that standards of work never very high, had declined even further—complaints which are strikingly borne out by Major O'Meara's report in which he says that the output of African labour is only half to two-thirds what it was before the war. People seemed rather gloomy about the African's apparent failure to respond to the ordinary incentives of higher pay and better conditions, and to settle down to steady and reasonably energetic employment.

On the other hand, the Africans, while apparently less inclined to do less, are undoubtedly wanting more. A quickened political consciousness was very noticeable. For instance, in the new and active vernacular press; the African Union, and so on. I found myself much that a whole new generation of Africans had grown up, and that Europeans seemed to realize now all too little about them. What they do know they are apt to dislike, and for this reason they sometimes tend to deplore this new type of independence.

During the Interview

In my probably view, the sort of person I'm thinking about is a young man who has had a primary school education, who can read minute English, read and understand a newspaper, and lives as much as he can in the atmosphere of civilization. Almost equally, he is a young man who takes a very strong interest in local and national political matters, even if he doesn't understand much about them, and is often much interested in politics, and is altogether his fault since he has access to a great deal of information of a reliable kind. He can't understand or afford difficult English books, and

he reads books in vernacular languages instead. And across the room a number of Africans of this new kind, he was asked how much they had developed. Many were willing to talk to and had read what they could about the outside world, even if their information was patchy and sometimes wrong. Makarere boys, for example, doing excellent work out in the districts, in such things or one in particular, a veterinary assistant who practised the gospel of soil conservation and the dressing down of hillsides to his own people with a passion of conviction, and according to his superior influence more effect than an European could have achieved. Other Africans who have gone in for trade are doing extremely well. I was interested to hear of one whose hotel was on such a large scale that he bought 30 gallons of milk every day, and on one occasion drove 50 miles in a hired taxi to interview his European supplier. I suppose he must have been making at least £1,000 a year. On the literary side, I met a young man who had sent three novels to an English publisher though I'm sorry to say none of them had yet appeared in print.

A New Relationship

All these things, I think, are straws in the wind. African development seems to be entering on a most difficult stage, which is bound to need considerable adjustments on both sides. Of course I realise that the great majority of Africans are still not far from that primitive stage of skins and spears which we used to know, and find so much easier to get on with than the schoolmaster or clerk. Between the extremes represented by the pig-tailed Masai moran and a Legislative Councillor goes people at every stage of development, education and half-bakedness. This means we have got to work out a new relationship for each case instead of following a more or less fixed pattern as we do in our own social relationships. This makes it all much more complicated and tiresome.

Nevertheless, it has got to be tackled. Time marches on, and it's no good going on thinking that the sort of paternal relationship, which served well enough in the old days when the European was always boss and the African a savage, will work in the coming age when more and more Africans will be educated to our level. The African might retort "you educated us, you started all these schools and colleges and encouraged us to use them and now what?" When we have learnt to copy you as well as we can, and learnt at least to imitate the European way of life, are you still going to treat us more or less like primitive Natives?

This doesn't seem to be fair or sensible, and I certainly don't think it's wise. I asked an educated African who speaks excellent idiomatic English whether there really is such a thing as an African, whether the tribal and racial differences can be ironed out. Well he said, "As Europeans we are just boys, and that unites us—we are all boys together."

the democratic dreams the Colonies have, most of them, so far from the idea of a full and formal association are well known and are intelligible. But indications are not lacking that they would welcome something a good deal less haphazard than the present association. The most important implications of this suggestion are those which concern the Dominions and India. Our article is concerned only with the Colonies. It may be seen in the disposition of the Colonies in what there is however very important for it to be worth while for us to consider about our rather distant future action with them at a time when we have so many important responsibilities. But we have often seen in the past that our opinions about them, while enough, may not be at least possible the way our new development policy, the African Countries, has grown in prosperity and population much faster than ourselves and may be an generalized fact, considerable importance is comparatively short time. In any case the efforts are made upon our Colonial relationships, summing up to this by our own particularities are in themselves sufficient warrant for a serious consideration of the future of those relations.

British and French Policies Compared

The French with their passion for logical definitions have also defined their colonial policy, while we have never indicated ours in attitude or method. Contrary to our recent speech, this policy has, as we understand, been proved less adaptable to circumstances than such attitude. The superior conclusiveness of our ideas upon which we pride ourselves has sometimes been in a position setting that they need to be changed rather than stretched.

The French policy and our attitude represent the two opposite poles of Colonial Philosophy. The most striking contrast between the Colonial policies of France and Great Britain lies in the centralizing tendency which informs the relations of France with her Colonial empire. Politically she appears to look to a future in which the advances in civilization of the subject peoples will be recognized not by the creation of local representative institutions but by fuller representation in the Central Government. Léon Jouhaux has written, "It is true that this same principle of centralization gave way later on to that of association; a characteristic was the inevitable result of the accretion of large areas in Africa where the population had had little contacts with European ideas. It is also probable that the new Colonial policy at present being considered in the course of a different assembly will include further developments on the effect of the British system of indirect rule. But the words 'protection' and 'self-government' are still abhorrent and the French colonies are the only ones.

Colonial Regards on Home Units

To mark the difference between this policy and our own we have not to ask ourselves what would be the effect on British interests if we were to do because this picture (General Blum's) we might suggest in a broken whisper that, "If we were returning to the Dominions, we have to make sure that the people will be listening." We would never occur to him that we were returning to a Colony people almost entirely by force of non-British races. Our attitude to the Colonies has always been to regard them as separate units with an equality and individuality of their own, and to expect them to develop in their own lines. Local legislatures have been established in the earliest possible moment, and it has been our declared intention (notoriously fulfilled) to make these units as small, and more representative, and more responsible to the people of the Colony.

This situation has resulted in a more rapid political development in the Colonial peoples than that of those under non-interfering European power. It has also been to their advantage in securing them their maximum possible employment in the public service of their country. Other nations have done as much as we have (but more) in making the Colonial subjects in the higher ranks of the administration. None can touch our record in the matter of the exclusive employment of local personnel in the above ranks. And our practice of allowing the people to manage their own local affairs (a practice most universally adopted in Africa) has made for a greater degree of contentment in our Colonies than in most others. True, our own in the fields of social welfare and economic development the picture is not so bright. The "autonomy" has not resulted automatically in the "sovereignty" - never, perhaps, completely formulated but nevertheless regularly pursued by individual self-sufficiency, with consequent inability for progress in both fields. The third failing, unless I misread the state of which it had to be reached from positive influence, a British Colony could have only those services for which it could afford to pay out of its own revenues had it not been specifically abandoned. This is an inapposite point like the French who had set themselves to form a deliberate policy instead of merely allowing our political attitude to

dictate our actions. It would be a wise illuminated lesson to learn from this. But it has been modified by the desire to make the Colonies to all others from the point of view of their rights. Thus the suggestion that the Colonies should be organized and formalized, though it may be of value, is of that system of that detriment? This is a question which we have to decide. Not necessarily, this is a question which it is submitted, is necessary if the former Commonwealth and Empire, in reality or regaining a former reign of influence, will only cause achieved quite otherwise than any lightning or other strings. It can be done through your force of the original imperial cohesion, but it can also be done by other means, and it is external to the Colonies. The Colonies, especially in their reactions, will be the chief factor in determining this. Associations of colonies, too, have already given a very good example. The Commonwealth Assembly has been given the task of making a constitution for the Union Française, a more centralized association which is to embrace the whole of the colonies of the various French Empires. And have its own assembly. It will not have a United States of the British Commonwealth, but a British Union serve the purpose. There can be no doubt that the Dominions, members of which would welcome the setting up of a body, more especially if permanent, but with a permanent secretary. Even so, such a body were purely advisory, it could do much to indicate a real solidarity, but that independence of solidifying and uniting such vital importance.

Confederation of Groups

At the present stage of imperial development, in most Colonies, as elsewhere, a long distance appears inevitable. But a satisfactory system of vigilance should not be impossible to devise and have analogous to "groups" of Colonies who could not provide themselves with members from among their own nations could be represented by a British Government and not by individuals.

It has been customary for species of our relationship with the Colonies, according to varying of friendship but of partnership. Hitherto, this has been used only in the narrow sense that we are the partners in the management of their affairs, and do not go further, and begin to submit them to partnership. The French have done longer in our common affairs. It can scarcely be doubted that admission now to the inner councils of the British Union would go far to remove the possibility that any present member of the Union might, in attempting to complete internal autonomy, wish to leave.

One thing must be postulated, that the Colonial members of the British Union Assembly must from the beginning speak with the unanimous voice of their respective Colonies (or regions) and not with the voice of Whitehall. The fulfillment of this postulate may perhaps involve measures of decentralization and regionalization such as those touched upon by Field-Marshal Smuts in his address to the United Kingdom Branch of the Empire Parliamentary Association on November 25, 1943.

Russian and American Views

What about the present reactions of the USSR and the U.S.A.? As regards the former, it is to be feared that nothing can be done. The Russian attitude to all Colonial Powers arises directly from the Marxist idea of Colonies as the ultimate expression of capitalism, and the nature of the relations between ourselves and our Colonial peoples does not really enter into the question at all. Any relation which places a non-Communist power in a position of authority over another country must be a capitalist relation and therefore antagonistic. That the inhabitants of the "subject" country may enjoy a degree of personal freedom unknown inside the U.S.S.R. itself has simply nothing to do with the question.

But the criticism of the U.S.A. is another matter. A great deal here is, of course, due to ignorance. President Roosevelt himself, when he called at Durban en route for Australia, was amazed to discover the extent in which our African subjects managed their own affairs. It is to be feared that much of the ignorance has little desire to be enlightened. And there is no doubt that American dislike of British Imperialism has deep and ineradicable roots in American history. But a great deal of American distaste of our Colonial policy is probably due to an inability to understand it. But that inability may well be due in part to the facts that the policy itself has not yet been sufficiently clearly stated.

The American business man, hardly though he often is in my opinion with a humanitarian sentiment, finds perfectly genuine humanitarian policy just too good to be true. He

that is, mainly because in such case the existing extreme shortage of workers will be considerably relieved.

Another factor in the Government's view is the reduction in demands for food requirements. For some years now crops products, largely maize, have been exported without any restriction of price or normal import duty. This demand has affected the ordinary economic well-being of Africa, in force a considerable percentage of the present production in East Africa will disappear. The traditional labour force will then be available for employment in plantations, such as coffee, which have suffered to seriously from their unfortunate position as non-essentials.

These factors should all help to bring a brighter tone to the labour situation, and while it is unlikely that the African shortage of workers will change the existing picture, any kind of unemployment problem there may arise conditions where "getting the work" becomes as bad an inconvenience instead of being a distinct advantage at present. A position where the good workers find themselves alienated, and the bad worker suffers for his shortcomings, is a natural improvement.

Two Forms of Native Economy

The economy of African society before the recent war was composed of two forms. There was, firstly, the capitalist farmer growing his own food crops, and producing some exportable articles, such as cotton or coffee, from which he obtained a cash income sufficient for his needs in imported goods and general expenses; or, where animal husbandry was feasible, the pastoralist relied on the increase of his stock to provide what he could not produce for himself. Secondly, there was the peasant proprietor who was also a wage-earner, relying on his plot of land for subsistence for himself and his family. He obtained ready cash by seeking work at some centre of European enterprise.

This system had much to commend it. The Government, the employer, and the African himself all derived appreciable advantages from it, in particular, it conferred on the worker a measure of independence which was exceptional.

But the whole basis of the system was the Native tenure of land, the ready and rapid growth of most crops, the elementary nature of all such problems as housing, clothing, heating, lighting, and so forth, and the simplicity of family wants increased to such a point that no considerable amount of fertile land, Native methods of agriculture included, was wasted exhaustion of the soil, with constant shifting and following-to-maturity production, and even the most modern system must be at a disadvantage in the absence of livestock and the resultant manure, since so much of Africa is dominated by the tsetse fly. The partial remedy of artificial fertilisers has not yet become an appreciable factor.

Conditions vary largely according to locality, and in some favoured parts the soil can still meet all demands; in large areas, however, there was at best but a meagre living to be made, providing an inadequate diet and always liable to disaster from bad seasons or pests. Of recent years various influences have combined to threaten even this measure of land sufficiency.

With the gradual introduction of modern medical resources the population has increased—where livestock exists, diseases have been largely reduced and numbers multiplied, with consequent extra demands on grazing, a rising standard of living has led to a more exacting use of the soil to produce more saleable crops, and, otherwise, if deforested, destruction of the former wasteful destruction of the forests to provide fresh ground has put a stop to expansion in that form. These factors have intensified subsistence.

In numerous directions the degeneration of the agricultural resources of the Native areas is most noticeable. In this attention has been drawn to the danger, partly owing to the "soil problem," which largely results from the effects of steady land deficiency. Even more serious, if less widely noticed, is the use of process which has been taking place. For instance, in the Sultana country in Tanganyika, there is no comparison with the position as it was 25 years ago, the denudation and impoverishment of the soil must be obvious even to an expert eye. Lack of manuring, steady destruction of the tree cover, wanton cutting of any available soil, and the desire to produce both food and exportable crops, has alone largely impoverished the land. Soil erosion has developed rapidly, the introduction of the plough has probably served to increase the effect.

Great Remedial Effort Needed

People have endeavoured to adapt themselves to these changes, but their efforts are not calculated to improve the position; industry and commerce and cultivation, according to Native standards, have maintained their efforts to extract as much as possible from the remaining fertile spots, without any effective remedial measures to accompany this. The Administration and the Agricultural Department have worked energetically to introduce preventive steps, and numerous signs of this are noticeable; nevertheless, the effort to stop further destruction will clearly need to be great, still more any attempt at recovery of lost ground.

In other parts the same process may be observed, though it is not so conspicuous. In Uogoo, in central Tanganyika, the struggle to wring a living from the dwindling resources of the soil seems to have increased steadily; conservation of water by means of dams and similar steps, have served to "stabilise" a measure of production, but the problem of pasture for the cattle grows in intensity, while the crops produced are pitifully poor.

The fact has to be faced that the former balance has disappeared; subsistence from the tribal land, and cash from exportable goods or wages, is no longer the generally applicable solution of the African's needs. Unless the existing burden on the land can be lightened, matters will go from bad to worse, and the standard of living in the home villages will deteriorate even below the existing level. An improved diet is an admitted essential if the Native population is to attain a proper standard of health and energy, but this is unlikely to be realized if more work is required to produce less food each year.

(Further extracts will appear next week.)

British Union Proposed by Sir Bernard Bourdillon

Closer Association of the Commonwealth

SIR BERNARD BOURDILLON, a former Governor of Uganda, suggests in the current *Fortsnightly Review*, that if a United States of the British Commonwealth cannot be formed, there should be a British Union, "a more or less federal association with its own assembly," embracing the Mother Country, the Dominions, India, and the Colonial Empire.

He writes *inter alia*:

"It is to be devoutly hoped that the Trusteeship Council will be equipped with both the powers and the organization that will enable it to act as an assistance to good performance rather than a mere watch-dog against default. The Permanent Mandates Commission believed itself to have been entrusted with both of these duties, and it was not altogether its fault that it was unable to perform either in a truly effective manner. One thing is clear—that the handing over of the supervision of the three mandates for Tanganyika territory, Tasmania, and the Comoros to the Trusteeship Council does not imply any intention that they should at any time cease to be administered as part of the British Empire."

Mr. Bevin was also silent, referring to the ultimate possibility of using the words "self-government" or "independence," and there is nothing either in his statement or in the history of the negotiations about the Trusteeship Council to warrant the assumption made in a leader in *The Times* of January 18 that "the goal for both Colonial territories incorporated before 1914 and territories acquired under mandate after the first

world war is gradual political and economic progress towards the status of self-government and eventual independence." A purist might quarrel with the use of the word "independence," which could be held to imply more than the circumstances warrant; but the serious mistake lies in the use of the last three words, which, unless the word "independence" is given meaning other than that which all parties intended during the discussions, and the subsequent discussions, can be interpreted only as indicating that the ultimate goal is the liquidation of the British Colonial Empire.

"We may rest assured that such is definitely the goal of the present British Government. We must, therefore, of any Government, be prepared to accept an alternative future. The accustomed association of the Colonies with one other they have attained a state of maturity, and in this they are not only of themselves but of world security. Some day, when they attain maturity, my dear, others, and they should be at liberty to do so,

"If we are to live, or must we already have to remain, our power to influence the future of the human race, we can do so only by continuing close company with the other units that go to make up the British Commonwealth and Empire. We are accustomed to argue that the very closeness of the ties that bind us together constitutes their strength, and this theory has, with one notable exception, survived the bulk of the recent emergency. But it can be said with confidence that it is at least conceivable that, had the association been closer and more formal during those 20 fatal years, the emergency itself might have been avoided."

proportion to the reduced supply. This situation was producing the gravest consequences since it was directly handicapping war production. With great reluctance, therefore, the Governments of Kenya and Tanganyika turned to the expedient of conscription for industrial purposes. This entailed the inevitable upset of the normal labour market, and encouraged a lethargic outlook on the part of the worker, who was naturally inclined to do the irreducible minimum of work.

A further important factor, making for inefficiency is the absence of money saturation throughout the country. A larger proportion of the population than ever before has been employed in wage-earning, pay frequently higher than the normal rate, while there is an addition of constant streams of family remittances from overseas. It must be remembered that the African wife and family are seldom dependent on such aid, while the case of the European dependents, since African village economy maintains the possession of a field which goes far to provide the subsistence of the family; in normal circumstances the wage-earner leaves home for a number of months, feeling confident that his dependents will be able to maintain themselves in comfort without assistance from him. It is therefore no depreciation of such remittances to point out that they are seldom used for subsistence, but are rather employed in purchasing extraneous goods, luxury or otherwise.

Easy Money for Africa

A fresh source of income arose as a result of the great rise in price of various forms of native produce: the acute shortage of foodstuffs due to two years' drought led to a rapid increase in value and output which formerly was hardly saleable speedily found a ready sale. The large influx of Europeans entailed a demand for eggs, poultry, fruit, and vegetables, which resulted in soaring prices, and no effective control was possible in view of the widespread prevalence of this petty trading. Many Natives thus found themselves able to make most satisfactory profits from quite modest holdings. This had the effect of withdrawing still more men from the usual forms of employment.

The population as a whole has therefore more money at its disposal than ever before, and in consequence there is no urge to earn more. The offer of increased wages is no inducement: indeed it tends to make the situation worse rather than better, since it entails only the further accumulation of superfluous cash.

The African is never much addicted to thrifit, and he is very slow to take advantage of savings bank facilities; if he wishes to put by, it usually takes the form of livestock. Consequently the price of animals rose steadily, until it began to have an appreciable effect on Native economy, causing a broader distribution of wealth (in cattle) and influencing marriage customs based on payment in beasts. In the large areas affected by the presence of the *tsatsi fly* no such outlet was possible, and the accumulating cash remained unspent.

The outstanding need was some outlet for this money; this was unfortunately lacking owing to the almost complete cessation of imports of the type that appeal to the tribesmen. Cooking pots, enamelled ware, knives, lamps, and so forth, up to and including bicycles and sewing machines, were almost impossible; "piece-goods" expensive and steady, alone formed a limited attraction. At a time when cash was available, the definite advance in the standard of living, the actual movement was in the opposite direction. The man was forced to return to the old Native-made tools and appliances, while his wife cooked in earthenware pots of local manufacture in place of the aluminising saucepan to which she had grown accustomed.

New Interest in Clothes

Nevertheless, in the early stages of the war, while imports were still available, a notable advance was made, particularly in the matter of clothing: the Nyankwasa of Tanganyika, almost entirely naked in 1930, were now wearing almost as much clothing as the coastal tribes, and in Nairobi in Kenya had already been advancing in this same direction, but hastened the change when opportunity offered. Such outlets for expenditure were limited and dwindling, so that for the past two years or more there has been little to tempt the buyer.

The situation merely reproduced the features observable in other countries, England not excepted. In the House of Commons in October 1943, the Prime Minister stated: "Wages are agreeably discounted by the fact that there is so little to buy." Another disquieting symptom, also not peculiar to East Africa, was a large increase in theft. The normally common articles of daily use, to be had in any roadside shop, became rare and desirable; so differing was rampant and employes had the greatest difficulty in retaining the necessary tools for their employes owing to the constant theft. Housebreaking was also commoner, with a general trend towards lawlessness. This formed a hampering and exasperating element in labour relations.

All these causes combined to produce a steady deterioration in performance, and output sank continuously. The employers sought in vain for some incentive which would stimulate their workers to further efforts. But in the circumstances there was little hope of success. Unfortunately, the one attraction that could be offered was a reduction in the task to be performed,

and this easy, if disastrous method of obtaining more labour was increasingly adopted. Thus a manager who by personality and example had contrived to maintain a fairly high standard found himself confronted by a demand for reduction, based on the fact that this had been introduced by his neighbour.

Briefly, the position was that the African in most cases did not want a job and even if he did, he had little difficulty in finding one to suit himself, so the return for the wage became steadily less.

This development, while largely inevitable in the circumstances, must have deplorable results; it has indeed formed a training in inefficiency, the effect of which will take long to wear off. I went to considerable trouble to observe general performance, and the results were as a whole most unsatisfactory in comparison with *Admiral's estimates* made 20 years ago: *output is more than half to two-thirds of the former figure, low though that was*.

Live Labour

Generalizations are misleading, and it is necessary to stress the large differences existing, but unfortunately the best figures are those from the small undertakings, while the more important employing centres have usually the worst record. This is true in other plantations, extending over thousands of acres, where very little supervision is prone to poor efficiency. The labourers start work at 7 a.m., even though the parade may be somewhat earlier, and are almost always back in camp with their tasks finished by midafternoon.

A rough index of the quality of work done is to be found in the standard man-hour, which is supposed to represent a day's work for the average man, and in practice an exceptional worker who is anxious to earn a certain sum as quickly as possible will do two, and not infrequently three, normal tasks a day, and this without any very great effort. A feature which makes the position even worse is the high degree of absenteeism; few men work six days a week, and any excuse is sufficient for a rest. Consequently, the average working week for the plantation is probably much farther than over 25 hours. An exception will be found in the factory, where work is better supervised, while starting and stopping are regulated by signal. There is also usually a nucleus of old hands who have acquired steady habits of industry and set the pace for newcomers. These, however, form only a fraction of the whole labour force, and do not go to form the average figure.

Tanganyika has a distinctly lower standard than Kenya, but this has always been the case, it is almost certainly a legacy from the attitude of antagonism to any wage-earning existing from the days of German forced labour on the plantations.

The highest standard is to be found on the small properties, such as the highland farms. There a handful of Africans working under an energetic proprietor who himself sets an example will display interest and keenness in their work and complete a very creditable day's performance. Other examples could be quoted where efficiency is fairly high; but as a whole the standard must be regarded as deplorably low.

Barrier 10. Increased Wages

It is most unfortunate that this development should have occurred at a time when a steady advance in performance had begun to take place. The outstanding need in East Africa has always been the establishment of the principle of a fair day's pay for a fair day's work, and as long as the labourer is annually paid more than a half-time there is not much call for the substantial increase in the wage which is universally admitted to be desirable.

The establishment of a 40-hour week of honest performance would at once double wages, and in addition effect considerable economy in reduction of overhead expenses, for it should not be overlooked that the employer has numerous obligations to his employees in addition to payment of wages. Any such standard, as this, however, seems to have receded once more.

Such a prospect nevertheless shows signs of improvement. Various factors may be expected to come into play in the near future which will have an increasingly stimulating effect. Not among these will be the revival of imported goods, recently agreed, these will be eagerly bought, and the accumulated funds in Native hands will speedily come to light. The market for cheap labour should attract keen attention from European manufacturers, who will have a remarkable opportunity to compete successfully in favourable circumstances.

The chief stimulus for improvement will be the return of the ex-servicemen, a large proportion of whom will be doubtless semi-skilled and unskilled labourers, and they will no doubt affect the supply of ordinary labourers, but they will be even so much less competent than the average employing workman, since they are not really qualified for the task. In a similar way, a proportion of the men who have been engaged in occupations which will not be available in much better conditions, but should return to their former work, will have a healthy view that the ex-serviceman will be glad to go back to the sort of unskilled employment that attracted him before the war. I believe this to be an exaggeration of an opinion that there will be a large reversion to pre-war methods.

than twice as much as Kenya exported last year. The East and Central African territories have entered on a new era of development—which must not lag behind welfare if the funds for its continuance are to be available when the Imperial Exchequer has fulfilled its function of priming the pump. Very few of the schemes for which Government grants have so far been made will add directly or quickly to the production of food, many indeed are likely rather to make demands. Consider as an example the immense potential development of mining in Tanganyika territory. In every way it would exceed the expectations of most East Africans. If that forecast be fulfilled, many thousands of Africans will find lucrative employment in the industry, leaving fewer and fewer engaged in the production of food for export.

Is it beyond the bounds of possibility that Kenya may become the main source of food in the East African territories? Though neither so rich agriculturally as Uganda nor

minimally as Tanganyika, she is not without her advantages. Kenya is the only source of Food Store. Kenya is the only source of large quantities of dairy produce north of Southern Rhodesia, and as Captain F. E. Hartis, Minister of Agriculture in that self-governing Colony said recently, "Cattle must be the foundation of our farming." Kenya has a European population which can make full use of modern

agricultural methods on a large scale, is admirably served with railways and, given reasonable fixed prices for their produce, Kenya farmers might well be able to give any African willing to work a better living than he could obtain from the land in the reserves, and such conditions preferable in the eyes of many Natives to those of mining camps. It is possible that the unexpected warmth with which the Labour Government in the United Kingdom has supported the policy of closer white settlement in Kenya may be partly inspired by a realization that however attractive mining and industrial development may be on paper someone has to provide the necessary food. Other factors are strategic and financial, including the undeniable fact that Kenya's revenue is ultimately dependent upon its European agriculture, and will remain so for some years even on the most optimistic estimate of Native progress. If Kenya is to become the main food producer of the territories, a separation of the white highlands from the Native reserves would, of course, be disastrous; for such a step would tend to greater labour shortages on the highland farms, to expanding migration of Africans to mines and other industries in Tanganyika and elsewhere, and to the growth of those discontents of which India now offers so sharp a warning. It is no argument against union that the East African territories are so different in their economic potentials. That, rather, is an added reason for welding them together.

Inefficiency of the African Labourer

Extracts by the Secretary of State's Labour Adviser

THE DOMINANT PROBLEM THROUGHOUT EAST AFRICA is the deplorably low standard of efficiency of the African worker; that is to say, an abnormally small output characteristic of the native country. It has always been a conspicuous weakness in East African economy, but it has been greatly accentuated by war conditions, and universal opinion which was confirmed by my own observation, declared that performance had deteriorated steadily during the whole of the war.

For this there are certain good reasons. Firstly, at the outbreak of war the cream of the men of the country was taken for the services in some form or another. Simultaneously with the disappearance of so many men who normally provided the working force, there was a similar exodus from the European community. A fairly creditable proportion of the able-bodied men of East Africa undertook military service in some form, and the country was thus deprived of the services of experienced and tested European staff.

This entailed a remarkable diminution in the number of supervisory which is absolutely essential.

Being further extracts from Major G. S. A. G. Browne's report on "Labour Conditions in East Africa," Colonial War and Economy Office.

Inappreciable degree of efficiency is to be maintained: a property normally managed by a group of energetic men in the prime of life was frequently carried on by a few aged, infirm men whose capacity was unequal to the maintenance of even a moderate standard, creditable though their performance was in the circumstances.

In other instances women whose husbands had proceeded overseas remained behind single-handed to do their best to carry on the management, thereby contributing materially to the war effort. In the many of these, and regard such a position as redounding equally to the credit of the mistress of the establishment and that of her African staff. In several instances I have regret expressed that they were unable to do more, and that they felt that they had been living in normal peace-time conditions while relatives in England were undergoing the ordeal of the war; nevertheless, the steady performance of onerous, if unobtrusive, duties in the face of loneliness, anxiety, tedium, isolation, and bodily and often sickness might well be regarded as an adequate solace to relieve these gallant ladies.

Another factor was the increased need for the highest possible production of essentials for the prosecution of the war, which caused the rapid and extensive development of various under-seas, notably sisal; in addition, other products previously entirely neglected came into prominence and had to be exploited to the extreme of their possibilities, a notable example being cotton. There was thus a general demand for labour out of all

THESE DAY COUPLES THEY HAVE BEEN PROVED BY USE

Mr. Churchill continues:—“I certainly will not allow anything said by others to weaken my regard and admiration for the Russian people. We all remember the frightful losses Russia suffered in the Hitlerite invasion, and how she survived and emerged triumphant. Her injuries greater than have ever been inflicted on any other community. There is a deep and widespread sympathy throughout the English-speaking world for the people of Russia and an absolute readiness to work with them on fair and even terms to repair the ruin of war in every country. If the Soviet Government do not take advantage of this sentiment, if on the contrary, they discourage it—the responsibility will be entirely theirs. There is, for instance, a very good way in which they could brush aside any speeches which they dislike. It is a way which is open to them now in the next fortnight. The British Government of which I was the head signed a treaty with Russia and with Potsdam solemnly undertaken to respect the integrity and sovereignty of Poland and to evacuate that country by a certain date. The United States and the British have already left their soldiers—but how we are told that the Soviet Government, instead of continuing, are actually sending in more troops. There is no reason why Soviet Russia should feel ill-rewarded for her efforts in the war. Her losses have been grievous; her gains have been magnificent. Her two tremendous anti-fascists, Germany and Poland, have been laid low. Japan was overthrown almost entirely by American arms. Russia recovered almost without striking blow, all she lost to Japan a year ago. In the west the Baltic states and a large part of Finland have been re-incorporated in Russia. The Curzon Line is no longer questioned. Then we come to the Straits of the Dardanelles. I welcome the Russian flag on “Russian” ships on the high seas and oceans. I have always told our Soviet allies that Britain would support a revision of the Montreux Convention about the Straits. At Potsdam the Americans and British offered to assist a joint guarantee of the complete freedom of the Straits in peace and war, whether for merchant ships or ships of war. To this guarantee Turkey would gladly have subscribed. But we were told this was not enough; Russia must have a fortress inside the Straits from which she could dominate Constantinople. But this is not to keep the Straits open, but to give the power of closing them to a single nation. This is out of harmony with the principle urged by the United States representatives of the freedom of the gateways of Europe.” Mr. Churchill

BACKGROUND, I

BRITAIN, RUSSIA, AND GERMANY.

Choosing a moment when the Allied authorities are engaged in delicate discussions for the pooling of forces from the “Russian” to the British zones in Germany, Mr. Dickens, an ex-officer of the Military Government, suggests that the main object of the transference should be “not to keep the German people alive and fit for work, but to enable us to create a democratic state in a key position of Europe.” Not content with that, Mr. Dickens drives home his point by identifying Communism with fascism as the antithesis of democracy, and by declaring that a Communist Germany ruled from Berlin would be almost as ruinous to the Germans as would have been the triumph of Hitlerism. One hardly need go to a Russian to hear off these statements echoes of the pre-war Anglo-German Fellowship. Any return to this policy of treating Germany (now “western Germany”) as a bastion against Bolshevism would be fatal to European reconstruction, and ultimately to world peace. The alternative is for Britain to join with the Soviet Union and France in co-operative economic planning on an all-European basis. This radically new approach will be impossible until both Britain and Russia have made a conscious effort to get rid of past fears and mis understandings. —*W. William Dickens, M.P.*

CIVIL SERVICE.—The established Civil Service was never supposed to be a creative industrial concern, inventive, experimental, and eager for initiative. The Civil Service is, in the opinion of many, on the verge of breaking down. That is why every recipient of greyness finds his desk piled with older and seemingly well-supported outcries about letters unanswered, permits delayed, out-of-court, departmental muddles carried to grotesque and heart-breaking degree, and general frustration of enterprise. Is the personnel of the right quality? Of the administrative grades of the old establishment there is little comment, often much praise. Of the temporaries, some were brilliant and rose fast and high; but these were naturally scarce. Recalled to their old jobs, many are good, enjoying their unaccustomed power to interfere with other people's business. Temporaries must soon make out in drastic overhauls of their departments what they cannot do by tape, and the need of reforming, and generally providing what they can make their chosen cause of Socialism a flexible and adaptable economic reality.

SCARCITY OF ADMINISTRATIVE STAFF.

There is an almost unanimous belief to-day in the inherent virtues of boards, joint committees, and committees, and hardly ever a warning that an administrative machine may be slowed down or stopped by its own weight. Any fool can produce a tidy organization chart showing lines of responsibility running smoothly down through successive ranks of the hierarchy with co-ordination curiously provided by co-operation in a potent administrative set-up. It takes a wise man, however, to work with the human material available for the purposes. A who is dashing but erratic; B, who is slow but sure; C, who has a chemical disinfectant for D and E, who can be led but not driven; the production men and the salesmen, who cannot understand each other's problems, and the accountants who know that both are needed; job X, for which no one is really suitable, and job Y, for which at least three men are ideal—this is the material which has to be worked into a pulsing organism.

A good administrative machine is made only up to 5% on a drawing board, as to 95% in the interlocking adjustment in a human being. This explains the intimate relation between the size and the efficiency of an organization. One simple rule of administration can be quoted only at peril: big bodies move slow. A swollen Civil Service, a big Government department, or a large industrial combine must suffer from immobility. When larger in size, there are more people to be consulted before a decision is reached, more chances of time-consuming conflicts of opinion, more ineffable paper work, more opportunities of shirking responsibility by passing things up. The ultimate responsible head comes to know less and less about more and more. The units in the hierarchy steadily fanning out beneath him come to know more and more about less and less. Co-ordination weakens and the more elaborate the organization, the greater the confusion ensues. Of all the factors limiting the improvement of social efficiency the cumulative backlog of dead-weight administrative skill is probably the chief impediment. Professor John Lukes is right and wide.

Administrative skill is strongly marked in the person who can talk in concise language, who can think clearly, who is not afraid to expose his ignorance, who is willing to learn, who is not afraid to admit his mistakes, who is willing to change his mind when he is shown to be wrong, who is not afraid to make a mistake, and who is not afraid to admit it. Such a man is illuminating the sunless regions of his mind, and they are bound to be bright.

FORD MOTOR COMPANY LIMITED

Manufacturers of motor cars, passenger cars, commercial vehicles and agricultural tractors for export and civilian use throughout the world.

Passenger Cars: Anglia (8 h.p.) and Prefect (10 h.p.)

Commercial Vehicles: 3 and 10 cwt. light delivery vans, together with a complete range of commerical vehicles of 3-ton capacity and upwards.

Agricultural Tractor: The Fordson Major—a new and bigger tractor with increased draw-bar pull.

Letters to the Editor

Kenya Land Control Board

Reply of its Vice-Chairman

To the Editor of THE EAST AFRICAN MAIL

SIR.—Your editorial comment (December 2) laid on the operations of the Kenya Land Control Board contain certain misconceptions which are of sufficient importance to require correction.

The Board is mainly "financial," consisting of six members appointed by the European elected members of Legislative Council and three official members. I was elected by the Board as Vice-Chairman for the first year. I retired on December 31, 1945, as on that date I ceased to be Commissioner of Lands and consequently ceased to be a member of the Board. I can, however, write with authority on what actually took place.

Before the Land Control Ordinance was enacted, a draft Bill with similar objects had been before the public for many months. The date of publication of this Bill was October 31, 1943. As it is essential to control land speculation during the period between publication of the Bill and the enactment of the Ordinance, the Commissioner of Lands was authorized to deal with applications for permission to enter into land transactions. The Governmental notice containing this authorization indicated that in all cases where consent was given by the Commissioner the transaction would not go ahead until it was reviewed before the Land Control Board when required. This provision was ratified in the Ordinance, which was enacted at the end of 1944, during the period of approximately 15 months during which I exercised these powers. I dealt with 819 transactions of which 810 were approved. The applicants to whom approval was not granted were informed that they could appeal to the Board after it had been appointed. In no case was an appeal made. The average time taken for dealing with applications during this period was about four days. It was only in cases which presented difficulties, requiring advice from other quarters that there was any delay. On the date of the enactment of the Ordinance there were no outstanding applications and during the past year the Board has kept abreast of its work and responsibilities.

There was, however, a brief period during which no authority existed for dealing with applications, this commencing from December 31, 1944, when the Ordinance came into operation until the European elected members appointed their representatives and the Board was duly constituted on January 26, 1945. Since that date the Board has operated smoothly and, in my opinion, efficiently. Further time in dealing with transactions has been necessitated by the Board's practice of consulting, for the strongly expressed desire of local authorities to be consulted on all transactions within their districts. This has necessarily resulted in the interval periods of dealing with applications being increased, the period now admitted is from three to six weeks.

The transactions to which you particularly referred concern a small block of 14 farms owned by the East African Lands and Development Company, which were under agreement for sale to various parties, mostly of French origin. Although the agreements had been in existence for several months, application was not made by the company for approval to these transactions until February 19, 1945. The application, which stated that steps in order to submit local plans of the portions of land being sold had not been submitted,

In accordance with the established practice, the advice of the local authority—Nairobi District Council—was sought before these transactions were placed before the Board. This advised indicated that no local objection would be raised to the transactions. It was not therefore until its meeting on April 25 that these applications

first came to be considered by the Board. The applications were very carefully examined on that date, and it appeared from the evidence available that the prices which the purchasers had agreed to pay were considerably higher than could possibly enable the purchasers to have a reasonable chance of success on sound farming methods and it was believed that the subdivisions in question were not capable of providing economic units at the purchase prices forced upon it was decided to defer the applications to enable an inspection of the land to be carried out. The Board therefore had independent inspections made by people whose qualifications left no doubt as to their ability to form a competent judgment.

These reports confirmed the Board's first opinion, and on June 27 the Board decided to notify the Company of its intention to refuse consent to the sales on the grounds that in their opinion the purchase prices were excessive. The local representative of the company and the prospective purchasers were then informed that the Board's reaction was unfavorable; but that before a final decision was reached an opportunity would be given for all parties interested to be heard, and that in accordance with the provisions of the Ordinance the Board would fix the value of the land. The hearing took place on July 25, 1945, and the Board was satisfied after fully considering the evidence submitted and the reports on inspections which had been made, that they were right in their previous opinion. This was then confirmed by resolution of the Board, and the parties were informed on August 10 of the Board's valuation, which were regarded as generous, and were a little more than half the figures stated in the agreements for sale.

At this stage the appeal tribunal for which provision is made in the Ordinance had not been set up. There appeared to be no necessity to establish the Tribunal until there was some indication that any appeals would have to be considered. Steps were immediately taken to establish the tribunal and promulgate rules for the submission and hearing of appeals. No one has been prejudiced by the fact that the tribunal has only recently been constituted and rules of procedure published, as the purchases have been occupations of the land since the agreement was signed. In these circumstances it seemed to be only reasonable that until the prospective purchasers had agreed to pay an amount which they believed to be too high, they were influenced by their greed and their failure to realize what were the limits of economic and financial property.

It appears from the Board's minutes that the Purchasers intended to pay within twelve and a very few days of having been allowed, from the inception of the Board until December 31, 1945, out of approximately 400 approved applications submitted to the Board, only 19 had been rejected on the grounds of over price. Of those rejected 17 were by the Company, which by far Syndicate, whilst the other two were by individuals.

Some comments from the Ordinance have been extracted for your information and the machinery of the Board can no doubt be visualized with a view to bringing about an improvement in this respect. The Executive Committee of the Board of Commissioners under took for the first time action under the Ordinance.

As I am no longer a member of the Board, I can only express my opinion that during the brief existence of the Board, has been expeditiously carried out in the public interest. The Board has succeeded in stabilizing the market at a reasonable level and thus preventing the occurrence of the serious consequences which would have resulted from inflation and its damage to the economy of the community.

Yours faithfully,

John R. N. M. R.

The appeal by East African Lands and Development Co. Ltd. is pending before the High Court of Nairobi, beginning on March 21.

much greater possibilities than we have hitherto realized. The most secure form of preference is by some co-operative method (I am not talking of Socialism), or by managing markets by a group of communities, which is a form of State purchase. Not long ago there was a surplus of wheat and Canadian and other producers found themselves besieged by waste stocks, and the price slumped to an entirely unremunerative level. The memory of that experience prevented vast numbers of producers from growing more wheat, which they would want to supply.

I do not think it beyond the wit of men to devise schemes which will secure producers against that kind of situation, give some security bottom to the market, that can be done only by large-scale co-operation forced by State action, and that opens the door to a type of preference which is capable of complete expansion. It is one of the forms of development which we ought not to lose sight of, because one of the biggest difficulties in the primary products field over the world has been the uncertainty of this kind.

Finally, the white paper, Lord Attlee has said, "has the infinite moral value of the British Commonwealth. The more some of our friends outside study and understand of the greater will be the appreciation of its value." His Majesty's Government are fully cognizant of the immense importance of that moral value, and we shall do all we can to develop it."

The House of Lords will this afternoon discuss the general subject of regional organization in Africa and the Middle East. Several peers are expected to speak on Colonial Paper, 1947.

Royal Family to Visit S. Africa Fixed for February, 1947

THE KING AND QUEEN have graciously consented to accept the suggestion of the Prime Minister of the Union of South Africa that they should visit South Africa in the early part of next year. Their Majesties, who would be accompanied by the Princess Elizabeth and the Princess Margaret, hope to reach Cape Town some time in February, 1947.

Rhodesians will be disappointed if the tour cannot be extended to their territory, but up to the time of going to press the authorities are unable to make any statement.

Friends Ambulance in Ethiopia Handicapped by the Government

The annual report of the Friends Ambulance Unit says of its work in Ethiopia:

"The F.A.U. Section in Ethiopia closed on May 1, 1945. The withdrawal, which was notified to the Emperor six months previously, was not complete, however, since seven members decided to continue their voluntary work for a further period."

"During their two and a half years in the country, the seven doctors and 35 other members of the Section had been responsible for running more than 10 hospitals with 2,000 beds, 12 clinics, eight provincial health centres, a school for lepers, and a home for the children of lepers."

"Gurada, and elsewhere, our members were responsible for the organization and administration of medical services in their towns. They members had charge of schools and others worked in the Administration of the Health Organization, Services and the Ministry of Education. In all, the F.A.U. Section had been responsible for the health services."

"The F.A.U. left for Ethiopia in 1942 at the invitation of the Ethiopian Government. It was to remain for three years, but the length of time was extended before the Ethiopian Government could replace the Indian medical service by one of its own. The Unit intended to period to two and a half years, but found it impossible to continue work beyond 1945. The members of the Section had come to believe that nothing could be done to prepare for adequate replacement so long as their continued presence seemed assured."

"Lack of Government interest and support for the services they were attempting to promote rendered their work increasingly sterile and multiplied the difficulties of administration."

London Chamber of Commerce E.A. Section Discusses Controls

GOVERNMENT CONTROLS and their effect upon trade with East Africa were discussed last week by the East African Section of the London Chamber of Commerce.

Mr. G. E. Schuster said that Government controls upon the coffee-growing industry and upon the coffee trader were two very different things. The coffee-growing industry had had a very fair deal from the Ministry of Food, which had paid a very good price, but unfortunately the industry had been deprived of the full advantage by drought and other causes, reducing the crop and consequently the profits.

As to the trader's side of the matter, trade did not exist under Government control. The question of quality, normally of very great importance to East African producers, had practically disappeared. The good services which planters and traders had rendered for fair Government trading had made almost inevitable the loss of incentive to produce coffee. The services which the Government had rendered were in fact not much more than those of forwarding agents. The Ministry of Food received coffee and allocated it to the British trade; buyers took what they could get and sold at the prices stipulated.

Stable Prices in the Future

Having enjoyed a stable price under Government control, growers in East Africa now wanted stable prices in the future. But they should bear in mind that a stable price was not necessarily a remunerative price.

Mr. B. E. Bellpiere thought that during times of shortage, some control in an elastic form was necessary. Though often regarded as a nuisance, there was no alternative. In the case of sisal, he believed that there was a certain market for five years; there was not much competition and the price was good. The producer liked a stable price because he could then market ahead of demand.

Mr. Schuster replied that it was possible to have stable prices without control, for what was true today in the case could be repeated. Remunerative prices were not to be had, but asking, "it was a question of supply and demand." Fixed prices based on cost of supplies.

Mr. McLean said that Mr. B. E. Bellpiere's reference to there being plenty of money in East Africa did not apply. The country was one of the few commodities the quantity of which had increased during the war. Control was difficult for there was competition with other countries, and unless there was strict control, control which would be very difficult to enforce, the British Government would have to subsidize production.

Difficult Period for Coton

Mr. Roger Norton considered that the chances of a stable price were realized by coffee producers, many of whom hoped for its continuation in some form. The inter-war period had been very difficult for coffee planters, as prices had fallen considerably, and during the recent war the quality of Kenyan coffee had suffered as a result of the grading systems and warehousing. There would be need to increase old markets and find new ones. The East African Government had not stated their policies. It was surely out for the Imperial Government.

Colonel W. A. Tucker, referring to a comment made by Mr. G. Loventry, said that if planters did not receive reasonable prices they did not produce, commented that La Palma plantation had been abandoned as it was necessary to grow working tea instead of coffee in that country. Many planters had complained of the effects of such economic invasions, and either had given up or had had been the position of all plantations in East Africa.

United States took^{*} exception at the time, and afterwards, the total imports from British countries into Great Britain were £105,000,000, and about 190,000,000 imports whilst the exports from Great Britain into British countries were £254,000,000 or 40% less of the total exports. That showed that Great Britain was trading more largely with foreign countries than with her own Dominions and Colonies.

"On the other hand, the total imports from British countries into the U.S.A. were £27,000,000, or 3% of their import trade, whilst the exports of the U.S.A. into British countries were £355,000,000, or 40% of their total exports. It seems to me that they have nothing to complain about in the fact that we are granting preferences to our Dominions, or that our Dominions are granting preferences to us. Because they get just as much trade out of us to-day as they did in 1937, as the United Kingdom.

Southern Rhodesian Tobacco

"With my knowledge of Southern Rhodesia, I believe if she lost her preferential arrangement with the United Kingdom she would certainly have to do so under tobacco cultivation and lose seriously in exports. It is evident that we should lose important trade if we did not have the U.S.A. would lose all export trade because they buy quite a great deal of the tobacco machinery and machinery used in Rhodesia today."

"Look where you will, our Commonwealth and Empire, the whole is interlinked with sentiment and common loyalty that stands on these twin bases, drawn by a common devotion to His Majesty our King. It was largely owing to this sentiment that they came into both less, and less, damage, owing to our reciprocal trade. Thus, they have been saved from starvation and consequential deaths."

"I have never concealed my belief that the conditions arising from the war would require some readjustments in our trade agreements made at Ottawa with the dominions and the Colonial Empire, and I am positive that any solutions should not take the form of breaking down a family trading system which has proved so beneficially to everybody. There has also been of such immense advantage in establishing a free trade through the economic development of the various members of that family group."

"There could be no greater disaster to world prosperity if the United States of America were suddenly to dismantle its integrated and highly system of free economic union between their various States, abandoned it, and, simultaneously, indicating what would do in similar circumstances, demands within the Commonwealth and Empire. Economic disintegration would be as disastrous to world economies as would be the economic disintegration of the U.S.A."

Family Economic Arrangements

"We cannot afford to abandon our family economic arrangements, and I was glad to hear from Mr. Pethick-Lawrence that the Government have no intention of doing so. If these arrangements were destroyed it would sound the death knell of our Commonwealth and Empire, and that would amount to world disaster."

VISCOUNT SWINTON said that he had served 18 years upon his experience as Secretary of State for the Colonies and three times as President of the Board of Trade, which at times made him responsible for negotiating and following the operation of many of the preferential arrangements which have been in force for the last 15 years. That dual experience had taught him beyond any shadow of doubt that Imperial Preference had not suffered, but on the whole helped world trade.

Imperial Preference has never handicapped the export of any product to any market. Indeed, over the years it has produced preference encouraged and improved the quality of many different sorts of raw materials, as well as textiles, and the products of the primary producers. Moreover, it has enabled them to buy more, and buy at the markets, in the Empire, and in countries of the Commonwealth.

I shall give you but one example of the way in which preference has been applied to the tea industry. All tea products have to compete with tea from Ceylon. All tea products have to compete with tea from India. At first sight, it would seem that the Commonwealth plant and soil resources are very favourable to tea growing, but there was one reason why the Commonwealth plant did not succeed in the tea-growing industry, that was, of course, that we have undertaken in this country the task of continuous endeavour to improve the quality, and that in enabling a far larger proportion of the plant to be used. War came, and America entered the war as much as we did. If that development had not been made, we should have had a short

Take Rhodesian tobacco products, a well-remembered word was at the Colonies, when the tobacco was had from China, "It's not good enough to go to the market." The Commonwealth is not good enough to go to the market. Let me take another example. It is not so important that, but, perhaps, more important, that the timber of the world, and every agricultural and mineral export of the countries had to be thrashed over in order to make their preparation to prevent a loss in quality and yellow fever. That was entirely dependent on purchasing, which was developed under preference.

"When we introduced the timber preference for the Colonies, we said, 'We must extend this to the full.' That meant the development of the qualities and uses of timber for which the Commonwealth is famous. I think the Prime Minister is rightly becoming so famous through the work of men like Chinnam. The Leader of the Young will remember how Sir Edward home from those other remaining countries carefully selected forest officers who knew all about conservation and absolutely nothing about timber, and put them to train with timber here in this country. The great advantage of the timber market and of the Colonies, when I was in West Africa, was that there was a tremendous demand for timber, and that market was being sent to the United States on the highest possible shipping priority month by month.

Industrial Production at Large

"And how are good standards now preserved? By continued research and development and this means of insurmountable benefit, not only to the producing Colonies and the Empire but to the world at large. The value of these preferences to the Colonies is well known that it will not be denied upon it, but they have added greatly to the livelihood of many of these Colonies, which have consequently been able to develop alternative crops."

"Nothing is more dangerous than dependence on a single market, and Colonies seem to rely on as well as on their motherland, which is tremendously important, and enterprises have been helped that in some of the Colonies preference has not only been their livelihood, in the Slave Coast, it has been their life. When at Ottawa negotiations were made throughout whether the Dominions and India and their own territories will extend mutual preference, the whole Colonial Empire that was not only of great mutual benefit to the Empire to the transaction, but was a very practical basis for the commonwealth nations joining with this country as trustees of a common Colonial trust. As a result the world has benefited in raw materials and by the added purchasing power of the Colonies and Dominions, which have produced these raw materials."

VISCOUNT ADDISON, Secretary of State for the Dominions, said it was the purpose of His Majesty's Government to try to increase the prosperity of the primary producer, since the well-being of the world of industrial nations—particularly depended upon the purchasing power of primary producers. He concluded:

"There is real need all over the world for a better understanding of the British case. We must take care to see that this is achieved. Large numbers of people have not appreciated what soiree is a structure the British Commonwealth really is."

Imperial Critics in U.S.A.

"At the discussions in the secret meeting of the United Nations in London, which took place last December, I was much impressed by the need of further institution of a good many institutions by the Commonwealth. The Commonwealth is a good example of the institution of Commonwealth in its currency of forms, which the Commonwealth has had, and which has given it a growing measure of freedom and self-government and independence to operate on the world stage and alone."

"There is instant application of the complete independence of the member of the British Commonwealth. It is not possible to have a Commonwealth of 26 countries with populations alone. They must, on making their own decisions, find the wisdom and the strength in the common value of the continual consultation and co-operation which we are developing."

"In addition, the Commonwealth Government is concerned, as far as it has responsibility to the economy in Great Britain, we shall keep the interests with our colonies. Every one of us will have to do much further work on development. If we have increased prosperity, then we can prosper. Even common sense to that point, for the potentialities of future world trade are vast, and, in my view, hardly appreciated, and this is the function of giving by giving our colonies the maximum and, then, its reaction on the methods of doing world trade will be almost incalculable."

"So, so, the word preference, supporters and opponents, by which a man is likely to be influenced, is

Let me examine how far the preferences given by us to Colonial products have proved of benefit to the Colonies. There is a considerable range of imports from the Colonies on which no preference is granted, such as rubber, tin and copper. About 60% of the total exports of the Colonies to all quarters fall into this category. Secondly, a preference clearly confers no price benefit on the countries eligible for it if they are producing in the aggregate more than is required by the preferential market. That means to say that a considerable block of Colonial products, headed by cocoa and oil seeds, receives little or no benefit from our United Kingdom preferences. This class amounts roughly to about 18% of the total Colonial export production. There is a third class to which the preferences granted by us are of variable value. Into this class fall sisal, timber, and certain oil seeds. This class constitutes about 2% of the total Colonial export. Up to this point the preferences granted by us are either of no obvious value to the Colonies or only of variable value.

We now come to certain classes of Colonial exports in which our preferences are of proved benefit to the Colonies. There are certain products which, owing to their quality, would, in the absence of preference, command only a limited market compared to products coming from elsewhere. The most typical case is tobacco from our East or Central African Colonies. The total amount coming from this source, when viewed in relation to our total import of tobacco from all sources, may not be important, but it is of the greatest importance to the Colonial territories concerned.

Tea and Coffee

Next there is the class of goods where the existence of a preference has proved to give to the preferential goods a clear advantage over similar goods coming from elsewhere, such as tea, coffee, and some fruits. This class has an important place in our Colonial export trade and constitutes about 9% of the whole.

Finally, there is the class of product where the preferences granted to the Colony are not merely useful to the production Colonies but essential to their economic life. The outstanding goods of this class are sugar, bananas, and some fruits. They constitute about 10% of the total Colonial export. Their real significance lies in the fact that without the preference some of the West Indies and Mauritius would go out of production for what we have proved to be their most suitable crops, for which no alternative has been found.

So there are about 35% of Colonial exports which may benefit to a variable extent by the preferences we accord, about 9% in which the preference is of clear value; and, a further 10% in which the preference is vital to the economic life of the producing Colony and the maintenance of its standard of life.

It may be argued that a general abolition of a régime of preference should not preclude our giving preferences to Colonial products in our market, so long as we did not claim that the Colonies should in return give preferences to our exports in their own markets. Such a process should be no more open to objection from others than the block purchase of such goods by the United Kingdom Government at a preferential price—a continuance, in fact, of the process to which we have become accustomed during the war. There has been in this country a school of thought to which this alternative would seem desirable, for this school has always been opposed to claiming from the Colonies anything in the nature of reciprocal preferences, should not, one may trust it, be given to give to their people the opportunity of purchasing in the cheapest market the goods required for their material development or social needs.

Extension of Export Trade

This may be the ideal but it is not very difficult to comprehend to our own people in our present circumstances and in view of the over-riding necessity to extend our export trade, though it can be shown that the reciprocal preferences accorded by the Colonies to our exports do not impair their importation of essential capital goods, and do not raise the cost of consumer goods so as to affect their standard of living. These reciprocal preferences seem to me to be justified, and I do not wish to meet this objection.

They certainly create nothing like a monopoly for some of the less important of the Colonial products that obtain come from the United Kingdom. In respect of only two items, tobacco and cotton textiles, has it ever been claimed anywhere that our system of caring does not benefit the Colonial consumer, but this is mainly due to the imposition of quotas against Japanese goods, which cannot be regarded merely as a temporary expedient.

We and the other self-governing members of the Commonwealth may hold our individual views of the value of the reciprocal aid we render to each other by a system of trade preferences. We may hold our own views, and they will not always be complimentary views, as in the motives which have inspired the attack on this system, we may hold different views of the worth of the concessions we are asked to make in attacking it in the United Kingdom,

who are responsible for the non-self-governing portion of the Empire, must stand fast to certain requirements which its welfare demands.

We must retain the power to continue the system of preferences, or some analogous system which would give the same results in cases such as those to which I have pointed. The extent of reciprocal benefits thus secured to our own export trade may be a matter of debate, but we should fail in our duty as trustees if we permitted any invasion of our capacity to render to certain of our Colonies the economic aid which it is our responsibility to accord to them.

THE EARL OF GLASGOW said that the American attack on preference ignored the fact that the United States has built up an elaborate preferential system which gives free entry to sugar grown in Puerto Rico and Hawaii, which are just as much Colonial territories as are our West Indies, and reduced rates to sugar from Cuba and certain other foreign countries.

A Fatal Step

Why should they have so much sugar? Cotton, tobacco, canned and dried fruits are products of which the United States has a considerable surplus and which they are anxious to sell here on an equal footing with the Empire producers. The Bretton Woods plan and Imperial Preference hang together. I assert that the traders and manufacturers of this country and of the Empire are unanimous—that it would be fatal to adhere to the Bretton Woods plan if that involves a sacrifice of Imperial Preference.

JOHN MAYOR pointed out that the American loan agreement provides for the release of existing sterling balances by instalments, the free convertibility of fresh sterling balances into any currency as they accumulate, that we shall not practice monetary discrimination, but that to my precise knowledge discrimination is proceeding in so doing we do not discriminate against United States products.

What, he asked, "will be the effect of all this? Firstly, if our export prices are so unattractive that the countries acquiring sterling prefer to take it elsewhere to spend, we shall have to take steps which might even include devaluation under Article 4 of the International Monetary Fund. Secondly, I believe that we shall have to maintain some form of quantitative restrictions for a considerable time. Otherwise I do not see how our exports can possibly pay for the enormous volume of imports we should like to receive. Within our insular state as well as to free the instalments of old sterling and pay with them the instalments of the American loan both starting in 1951."

United States' Share of Markets

During this time of restriction by import licences we shall be at perfect liberty to import anything from anywhere, so far as Bretton Woods and the loan agreement are concerned, provided we do not discriminate against United States goods. In so doing, what will this amount to? Suppose we have to pay to grant to the United States the same share in our markets as they held in some distant period. If we have taken, we imported goods to the value of \$1,000,000,000, of which \$400,000,000 came from the Empire, \$300,000,000 from the United States, and \$300,000,000 from other neutral countries. The United States' last share was 30% in 1938, so that the \$14,000,000, approximately \$100,000,000 in neutral and cultural products.

It is a continual procedure between us and the United States to force share of Empire markets on to our markets. These are liberal products which enter 10% of our market, mostly from America. The Empire is the only place where the free market really still abides. The cotton, the tea, the tobacco, these three products are the ones in which we only now do not compete. The United States is very appreciable share of our markets. Our Empire has never been able to produce the staple cotton that Liverpool requires, and the competition has nearly always been between Egypt, Brazil, and the United States. So I do not think the Empire has got to do.

Cotton is an old story. As a smoke of Rhodesian tobacco or cotton seed should be most unhappy as regards Rhodesia to expand all the tobacco she wishes in our market. But I fear that cotton and tobacco are the principal staples in the United States, and that they may be considered to be part of the price of the loan. In 1937, at all events, Australia, Canada, and New Zealand appeared to import raw tobacco from the Empire alone, and it is possible that Rhodesia, despite the aid done so already, might be able to find a better market there.

DISCOUNT ELIOTT emphasized that in 1937, five years after the Ottawa Agreements to which the

MARCH 21, 1946.

told me that the Kikuyu in his district would not accept a task that could not be finished by 11 a.m. After that they went off at the pay, and no amount of offers of double pay would make them stay longer, will earn them a bad name. Many similar stories.

Some people dismiss them as the views of the houses, but there is such an authority as Mr. J. R. Robins, General Manager of the Kenya and Uganda Railways, makes public statements to the effect that they cannot be ignored. In his opinion, the standard of efficiency does not seem to rise with better education, housing, health, and other welfare services. Offers of comparatively high pay did not tempt his men; they merely worked until they had just enough to live on, and then knocked off for the rest of the week or day. To them, plenty of decent food was the first need of life. In his view, we have not found the right incentive to induce the African to work steadily and well. Whether something besides money could be found that would do so is a fascinating field of social research.

Training for Farm Workers

War conditions were, of course, abnormal; goods were not in the shops to tempt Africans, and many of the fittest and best of the young men were in the Army. Perhaps the removal of both these obstacles will change the situation. Certainly a great increase in the efficiency of labour and a big increase in its pay are essential if the country is to go forward. It seems strange that in a purely agricultural land there is no provision for the training of farm workers. There are training schools for teachers, carpenters, veterinary assistants and so on.

Why not for farm workers to turn them into really skilled and trustworthy men? There are streams of hope in the situation. Probably never before have European employers been so anxious to do the right thing by their labour and so conscious of the need to provide welfare services, including schools. There is a real interest in such matters as housing and rations, though practical efforts are often cramped by difficulties in building and finance. But noticeable progress in this direction has already been made.

Lessons of the Last 10 Years

To end on a more cheerful note: the increase in production in the highlands, and, more important, the improvement in farming methods, are very striking. A great deal has been found out in the last decade about how to treat the land and soil that was, run down, is being steadily improved by ley farming. There are backlogs, of course, and here again everything is held up by lack of equipment; there is said to be only one heavy tractor in the Government's possession capable of terrace-tiling land.

New settlers should derive immense advantages from the experience gained by established farmers. Their success will depend, not only on themselves, but on a question being everywhere asked: whether the prices of primary produce will be maintained at a level which makes farming pay. New produce is desperately needed. But what will happen when the world again talks of surpluses instead of famines?

This concludes the short series of articles by Mrs. Elspeth Huxley after her recent return from a visit to East Africa.

Government Agrees to "Reciprocal Economic Aid"

Exhaustive Debate on Imperial Preference

LAST WEEK we reported the speeches in the House of Lords by Lord Altincham, Lord Rennahan, Lord Croft and Lord Chesham on a motion by Lord Altincham "that this country should maintain and promote the policy of reciprocal economic aid between kindred peoples as indispensable to the coherence of the British Commonwealth, the welfare of the Colonial Empire and the free development of regional co-operation amongst such other States as may desire to strengthen their economic systems in that manner and as calculated to stimulate multilateral world trade."

From the addresses delivered on that occasion we record the following passages:

Volume of Colonial Trade

LORD HALL said that he would divide the trade as that coming from or going to the Colonies, for whose tariff the United Kingdom was ultimately responsible; this would exclude Southern Rhodesia, for the purpose of convenience would include the former. In a normal year like 1937 or 1938 imports from the Colonies had constituted 7% to 7½% of our total imports from all sources, and our own exports to the Colonies had constituted from 9½ to 10½% of our total exports to all quarters.

These figures, he continued, represented 2½% with the Colonies as a whole, but there are certain territories, chiefly in Africa, in respect to which, either because of treaty commitments such as those agreed under the Congo Basin Act, or because they are held under mandate, it is not possible for us to institute a system of preferences. If we exclude these, our exports to the Colonies may be for our present purpose more correctly stated as between 7% and 8% of our total overseas trade.

Does a preference system enable the United Kingdom to obtain a more secure or a cheaper supply of the raw materials of industry or consumer goods from the Colonies? It is clear that the system of preference can but itself effect little in this respect, since the Colonies will normally seek to sell their products in the cheapest or most convenient market. The only way of guaranteeing the diversion of supplies from other markets to that of the United Kingdom would be to impose discriminatory duties on the export materials from the Colonies in favour of the United Kingdom.

We have made only one or two experiments in this direction, the most outstanding being on Malayan and Nigerian oil. Such discriminations are not only difficult to reconcile with our position as trustees, but also, if applied to agricultural products, they might tend to reduce the exports of the producing Colony. They are, however, not unknown in the trading blocks and are hardly therefore repeated.

On the other hand, some slight advantage is enjoyed by the Colonies does not always lie in any preference given to their products in the Colonial market if the market in the United Kingdom is affected by inter-colonial trading and the use of a common currency.

Effects of Protection

A political analysis recently made shows results which may be summarized as follows. It is beyond question that the trade increased by those Colonies which have not been protected by means of discriminatory arrangements from 1937 to 1944. This has resulted in increased purchases of British goods. The main conclusion is that the benefits of the system lies rather in the fact that in some areas it enables United Kingdom industries to maintain a market which would otherwise be lost to cheaper and poorer quality goods. Some difficulty of analysing the figures of Colonial trade is acknowledged. It is held that, on balance, the United Kingdom has lost more of the preferences given to her imports from the Colonies than it gained by the preferences accorded to its exports by countries of those territories.

It is not necessarily to be expected that there will be an overall gain of the Empire, but it may be well viewed in our responsibilities to assist their development in this particular manner.

Must the same story repeat itself, and must finally the last vestiges of Native possession go?

The fact is that the native population is beginning to tell. The estimate is that within twenty years it would double the population. This is a bold estimate. The Humphrey report gives 2.5% as the proportion of children to adults. In a country like Kenya, with a very large number of squatters, the figure will tend to be 39% children. This may be too cynical, but it seems likely that the official figures under-estimate.

Where are all these people to go? At present the tradition of the land is to let it go, and if the man's services are so limited that every young who grows to manhood is entitled to his share of land. Even if he earns his living in a town, even if he has a pensionable job, his wife or some female relative still cultivates his patch of land and keeps alive the tradition. This process cannot go on. Yet if a man loses his land, where will he go when he loses his job, gets sick or falls sick? It is now his only form of social insurance.

Elimination of local industries

A school of thought believes the only answer to be industrialization. It is hard to see any other alternative. But industrialization cannot be introduced just by saying it is a good thing. Kenya has raw raw materials and no cheap source of power, and its labour is completely unskilled and inefficient. Sir Charles Lockhart has pointed out with some force that there is also no market to speak of; the purchasing power of the African is so low that the whole market would be saturated by a few days' production of almost any article by up-to-date factories.

The economic difficulties are not always realized by those who preach industrialization as a cure for all evils. All the same, there is also urgent that a more energetic effort should be made to see what can be done. There has never been a survey of industrial potential in East Africa, and so far as anyone can see, the Government has not taken any very active steps to explore the ground, to invite industrialists out, or offer them facilities.

It is true that the group of factories under the Industrial Management Board has done well, but they are on a small scale. That is one of the signs of industrialization: to-day plain employs extraordinarily few people. Of this whole group—which turns out pottery, sunflower and hydrogenated fats and oils, bricks and other things—employs only about 1,000 Africans. Perhaps the whole question of industries and the important allied one of village crafts, will be investigated by the new Economic Adviser. Ultimately building may be the only answer, but we are a long way from that still. The only road towards it if that one can see seems to be the long uphill one of educating the women and raising their standard of living.

Insatiable Demand for Land

Africans have their own remedy and they are advancing it with considerable persistency and vigour. This is that they should have more land, and the only place, of course, where more still to be had at any rate usable land is to be found is in the European highlands. They are demanding that the highlands should be handed over to them. If the demand for land will be insatiable so long as there is hardly no other outlet for the growing population, the one suggestion that the Africans would be satisfied with this bit of land for more than a year or two is the knowledge lies behind the reluctance to get it with the proposed "lease" in the British Hills.

The obvious answer is that it would be folly to throw what is left of Kenya's good land to the wolves who have already eaten up so much irretrievable soil fertility. To those who say that this would not happen because the land would be farmed under supervision, the only present answer is—prove it. For so far it must

be remembered such efforts as the Government has made have either failed to stop the overall degradation of the land, which less starved to build up its own fertility.

A case in point is the settlement passed from the Masai reserve for the accommodation of squatters—Gaurrone on the Mau. This was demarcated by the Government, the squatters were allocated their land, and in theory, the settlement was throughout under Government control. Yet in three or four years the land had been so badly ruined that it will scarcely now grow a decent crop. It is being farmed on the usual Kikuyu soil-exhausting lines, without grass ley, without manuring, without compost, without terracing, without any soil-building practices at all.

Economic Suicide

The truth of the matter is that until African farming methods are radically changed to meet new conditions and a totally different type of farming organization is introduced, some say on the collective farming model, it would probably be economic suicide to hand over the productive land of the European highlands to peasant farming, which is the method of the African, and which is nowhere in the world adequate to support the machinery of a modern State, and the social services which are everywhere demanded.

A corollary is that the European areas must be fully developed. To have empty unused acres next door to over-crowded over-cultivated acres would obviously be unjust and impossible. No theory or promise could ultimately keep back the hordes of land-hungry people. That is one reason why the present settlement scheme is vital to the future of the Colony. White settlement must save itself if it is to survive, and it can do so only by consolidating and making the very fullest use of its land. This issue, to my mind, far outweighs any other to-day.

If the land were fully used many squatters would have to go. Some say that the day of the squatter has gone, that they must become independent labourers, on permanent employment, with a house and garden and perhaps an acre of land, such as the small labourer in England has. This would mean the rise of a genuine landless class, dependent on employment for its livelihood. This in turn would bring a new attitude of relativity and work on the part of the African, and new responsibilities on the part of the European. The country is to progress, these attitudes and responsibilities must somehow be met.

Work Shy Africans

Everyone is incongruous that in a country with a fast-growing population, with many idle young men, and with considerable numbers of people on a long lease from the Government, there should be a shortage of labour on the farms. Yet this is certainly so. One obvious answer might be that pay and conditions are not attractive enough. Certainly they are not in general good. Yet that is not the whole answer.

The tea plantations, for instance, have the reputation of being extremely good employers. Housing is well above the average, schools and clinics are provided, cattle are kept to give milk for children, rations are adequate. Yet the manager of one of them told me that he was importing labour from the Belgian Congo at least to his company of £20 per family, and this was a time when young men in Uganda were in demand. That position cannot be right.

Perhaps more disconcerting than the shortage is the labour is becoming less productive. This is serious because the only remedy for a number of ills is a very large increase in wages, accompanied by a great increase in skill and output, so that each employer can have a much smaller but more efficient and highly paid labour force. Employers are willing, and even anxious to pay more, but they must see better output per man. They are not getting it now. An experienced coffee planter

promises solemnly given by the Natives before they began work upon it.

On the one hand we have a mass of people who have tended to lose their faith in tribal sanctions or, in common terms, their sense of responsibility, and moral principle. On the other we have a relatively small proportion of Africans of exactly the same origin who have reached a higher level of morale than any similar number of their race had ever reached before. Which of these is to become the deciding factor? Left unattended, morale will always decline. We can grow old in ourselves but others need to be won over. The lessons of these stern years of striving are to be applied. People of all races, in spite of their best efforts, peace and victory, will be won only by hard work, good leadership, and unity of purpose, in a word, by morale. On European soil is the return of the owners will provide that extra supervision which is necessary, but in their own areas, large numbers of Africans who have never realized, as the askari learnt in the field, that work conquers all things. That is why we have repeatedly emphasized the need of practical demonstrations, and propounded a plan for the formation of teams of selected askari under the direction of picked European leaders for work in Native areas. Such teams—such, so far as we can see, such teams alone—could in present circumstances demonstrate the place of discipline in everyday life and show the result of well-directed work. Native civilization might in this way be given a chance to learn the valuable lessons which the askari could teach. In our view, it would not only be beneficial for these lessons to be handed on, but quite unfair that they should be withheld.

It is also necessary to emphasize that the asset now available to the territories is not of a permanent character. If not quickly utilized, it will rapidly disappear. Those who served in the 1914-18 war

Governments Must Decide.

remember only too well how swiftly the qualities acquired in service vanished under unemployment and frustration. General Platt pointed out in a recent speech that the African soon forgets what he has been taught. Now the East and Central African Dependencies have among their African population several hundred thousand Natives who have learnt discipline in the fullest sense of the word—military discipline against which there is no escape after enlistment. That discipline, though it proved eminently successful in its results, will not be continued in peace-time, except on a very small scale. The Governments will therefore not be able to count again on the same number of disciplined Africans to assist them. Against these disciplined ex-askari may be set the many undisciplined tribesmen and detribalized town-dwellers. Such indiscipline is not a matter of opinion. It has been mentioned in many recent official reports and in numerous speeches to Africans. That it forms a serious threat to the progress of Africans in and out of the reserves is obvious, but there is no indication of the policy which any Government proposes to pursue. In the long run the real remedy for the undisciplined Native must be the disciplined Native, and we suggest again that for both short-range and long-range purposes the territories would be wise to lose no time in making use of the services of picked ex-askari among those of their race who in varying degrees have lost their sense of direction. Governments cannot stand permanently aloof. They must support one group or the other. Which is it to be?

Problems of the Land in Kenya

By Elspeth Hayley

BY FAR THE MOST IMPORTANT and urgent matter facing Kenya is that of the land—its deterioration, its over-crowding, and what the population surplus to the capacity of the land is to do. It would be hard to exaggerate the magnitude of the question, and time is running short.

It is sad to go back and find that in spite of all that has been said, soil erosion and exhaustion have got far worse, at least in nearly all the Native areas. D-Day for Ukambani came and went without so much as the ritual slaughter of a goat. Much of Ukambani is finished, so far as one can see. It is well known that some 200,000 people will have to be moved off a large area of it if any serious regularization is to be done. The question of where to move them is what defeated the planners of D-Day. The suggestion made by Mr. S. V. Cooke

today, enough, in a "horseshoe" meeting, to "lease 200,000 acres in the Mbogani Hills—that is, in the European area—was being much discussed. Ukambani is from being the only part of the Native lands badly affected.

Publication of the Humphrey report in South Africa as something of a shock to a good many, although main factors were not new. Mr. N. Humphrey pointed out that over-crowding and subdivision were so far advanced that many Kikuyu families now worked insufficient land to provide them and their families with enough to eat, let alone a cash margin to spend on clothing and equipment. He estimated that in this one administrative district alone about 13,000 families, or 60,000 people, ought to be moved off the land. How to allow recuperative measures to be applied

MATTERS OF MOMENT

IT IS TOO EARLY yet to judge the effect of six years of war upon the general body of Africans in the East and Central African territories. Scores of thousands who voluntarily enlisted in the forces have Impacts been under stricter discipline than of War ever before, and there is no evidence that it was resented. On the contrary, the askari on active service quickly realized the essential need for discipline and all of them are fully aware that the success of our arms could not have been achieved without it. There is common agreement among those who led them in the field that they have been tremendously impressed by the colossal war effort of the Empire and that this virile section of the population of British Africa holds the British in higher esteem than ever before. There must be exceptions to any generalization, and this attitude may not be that of the men who spent most of their time in uniform driving military lorries round about or in stationary camps. But the askari on active service, especially the non-commissioned officer, with some responsibility for the conduct of the men under him, cannot have failed to mark the effectiveness of a well-directed disciplined force through his own devices he may all too easily realize what he has learned.

The Africans who remained behind have not had these salutary experiences. War-time needs reduced the police forces. Crime became not only easier and safer, but also more remunerative. Civilians who missed five Supervised Salutary Experiences on farms could remain at the normal level and European authority power difficulties, coupled with high prices for produce made it possible for Native labourers to earn more money for less work. In the reserves high prices for all crops and animals, steadily supported by generous remittances from the men in the Services, reduced the need to work harder than was desired, and the lack of consumer goods in the shops removed what would have been a strong incentive. It is not therefore surprising that there was a marked decline in discipline, of which we do not merely refer to the relations of European master and African man. Statistics by more than one East African Governor have shown that the problem is not so acute in the tropic areas of the reserves as in the European farming areas. This loss of morale is reflected most markedly in Native areas. For instance, hand-made pottery for Native occupation has within a few years been destroyed for profitable cultivation in the European areas.

Customers in the United Kingdom who may send their orders direct
are reminded that we can only accept from them orders for Trade,
Technical, Religious and Scientific Journals. Also, we cannot
accept orders from them for other American Publications even
though they are to be sent to Sterling Countries outside the
United Kingdom.

This offer is subject to the availability of the publications. As the rates
are posted direct from America there will be no discount
between receipt of the order by us and commencement of posting.
