ent of urolithiasis at the Kenyatta National Hospital.

Ndirangu, K; Ngwanyam, NY

Abstract:

Over a ten-year-period, 82 patients with 89 episodes of urinary stones were seen and managed in the General Surgical Units of Kenyatta National Hospital. The management procedures were evaluated and the magnitude of complications (morbidity/mortality) assessed. Some recommendations are made for the prevention and management of stone disease in this and similar communities
