

## Baseline study on agricultural mechanization hubs

The Department of EBE in collaboration with KENDAT conducted a baseline study on agricultural mechanization hubs from 21st to 26th September, 2015

The aim of this study is to collect baseline information on farming activities with special focus on **agricultural mechanization**. The information collected will form policies for improving production of the key crops in study area and other areas in the region. The importance of the study is to Baseline surveys are an important part of any Monitoring and Evaluation (M&E) process. The survey was carried out by Bayesian Consulting Group on behalf of KFIE.
